

# **Backward EMC for $B \rightarrow \tau\nu_\tau$ Decay**

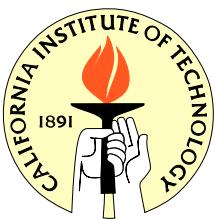

## **With Hadronic Tag $B$**

A. Rakitin

Caltech

May 29, 2011

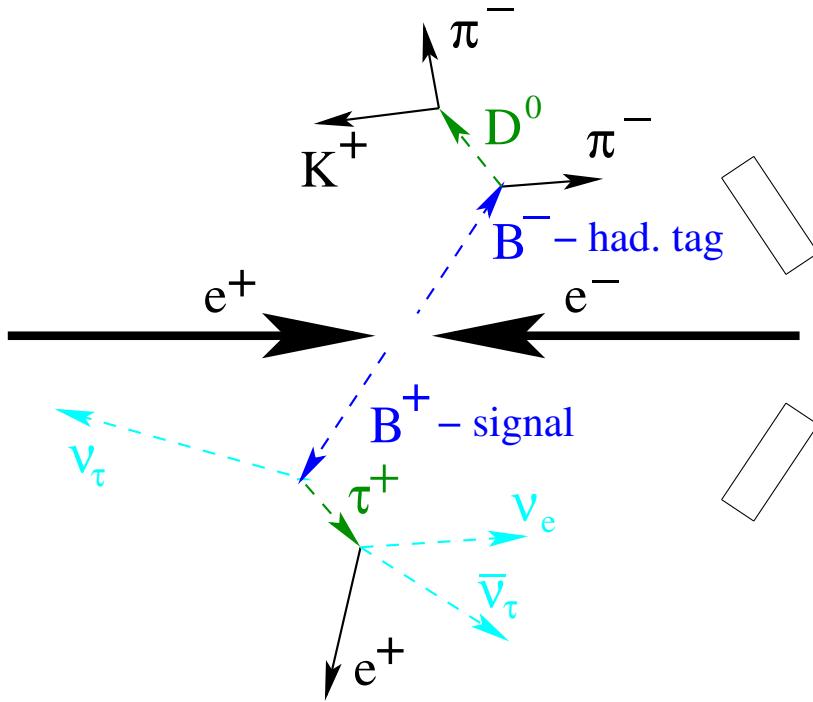

XVII SuperB General Meeting

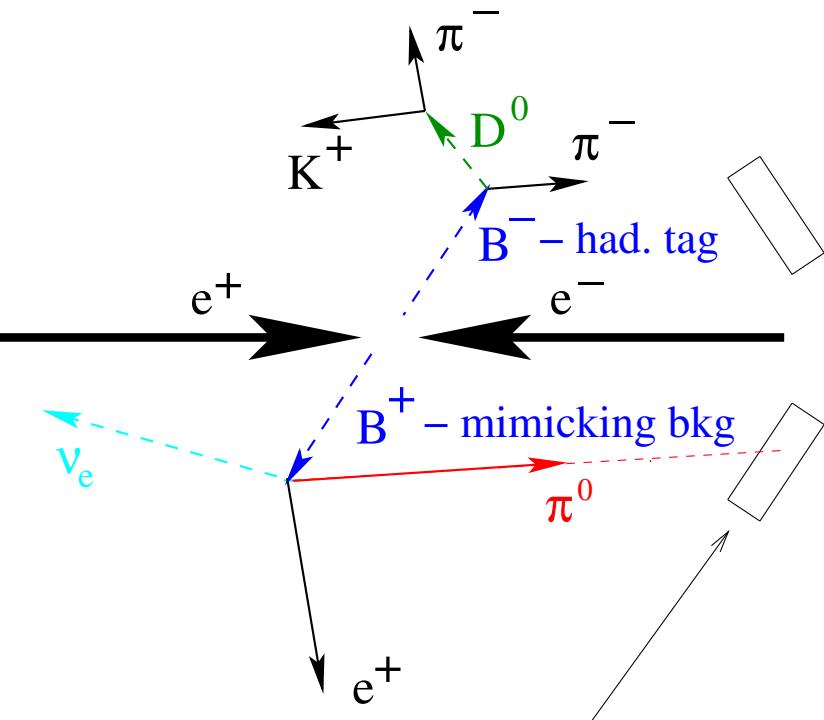

# $B \rightarrow \tau\nu_\tau$ Event

True signal event

Mimicking bkg event

Without Backward EMC  
 $\pi^0$  may escape detection

Reminder: The purpose of Backward EMC is to help better distinguish between signal and mimicking background by detecting (otherwise lost) photons

# Analysis Strategy - I (no Bwd EMC)

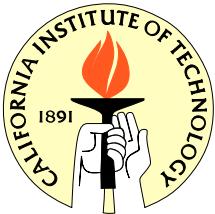

- Generate  $B^+ B^-$  Monte Carlo with FastSim V0.2.6 and V0.2.7 pre-compiled executables and V0.2.7 with the latest patches applied (i.e. all(?) bugs fixed) for DG\_4 and MixSuperbBkg\_NoPair for different decays of  $B_{tag}$  and  $B_{recoil}$
- Reconstruct  $B_{tag}$  and  $B_{recoil}$  with PacHadRecoilUser package
- Select only  $B_{tag}$  with minimum  $\Delta E$  (one or more per event)
- Plot  $m_{ES}(B_{tag})$  and fit it with Crystal Ball (sig) + Argus (bkg) to get  $B_{tag}$  yield
- Obtain yields for signal ( $S$ ) and mimicking background ( $B$ ) decays of  $B_{recoil}$
- Calculate  $S/B$  ratio and  $S/\sqrt{S+B}$  at  $75 \text{ ab}^{-1}$  **without using Backward EMC info (reference values)**
- In particular, ensure that  $B_{tag}$  and  $B_{recoil}$  reconstruction does not include bwd photons with  $\cos \theta < -0.8$

# Analysis Strategy - II (with Bwd EMC)

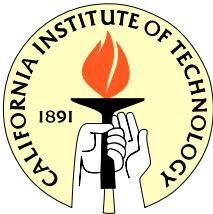

- Calculate changes in  $S/B$  ratio and  $S/\sqrt{S+B}$  at  $75 \text{ ab}^{-1}$  using Backward EMC info
- Calculate  $E_{extra}$  in Bwd EMC for 6 different thresholds: none, 20, 30, 50, 70, 100 MeV
  - ☞ Thus every plot comes in 6 copies
- Obtain reconstruction efficiencies for signal and mimicking background decays of  $B_{recoil}$ , as well as  $S/B$  ratio and  $S/\sqrt{S+B}$  at  $75 \text{ ab}^{-1}$  as functions of cut on  $E_{extra}$
- Compare to reference values without Bwd EMC, obtain 6 rel. differences as functions of cut on  $E_{extra}$
- Quote maximum value of these 6 functions as final result for this combination of signal and mimicking background decays of  $B_{recoil}$
- Repeat for different signal and mimicking background decays of  $B_{recoil}$
- Repeat for FastSim V0.2.6, V0.2.7 pre-compiled executables and V0.2.7 with the latest patches applied, to see the difference
- Check if bwd photons with  $\cos \theta < -0.8$  can be used in  $B_{tag}$  and  $B_{recoil}$  reconstruction (according to the latest news from Chih-hsiang)

# $\tau$ reconstruction

Sig $B_{sig} \rightarrow \tau\nu$ decay	$\tau$ BF from PDG	Mimicking bkg
$B_{sig} \rightarrow \tau\nu, \tau \rightarrow e\nu\nu$	17.36%	$B \rightarrow e\nu + X$
$B_{sig} \rightarrow \tau\nu, \tau \rightarrow \mu\nu\nu$	17.85%	$B \rightarrow \mu\nu + X$
$B_{sig} \rightarrow \tau\nu, \tau \rightarrow \pi\nu$	10.91%	$B \rightarrow \pi + X$
$B_{sig} \rightarrow \tau\nu, \tau \rightarrow \rho\nu$	25.51%	$B \rightarrow \rho + X$
$B_{sig} \rightarrow \tau\nu, \tau \rightarrow a_1\nu$	9.32%	$B \rightarrow a_1 + X$
$B_{sig} \rightarrow \tau\nu, \tau \rightarrow \pi 2\pi^0\nu$	9.29%	$B \rightarrow \pi 2\pi^0 + X$
$\tau \rightarrow 6$ modes	90.24%	$B \rightarrow$ anything

- $X$  - any lost particle(s). Rare loss of particles compensated by large relative BF of the process involving  $X$  w.r.t. signal decay  $B \rightarrow \tau\nu$

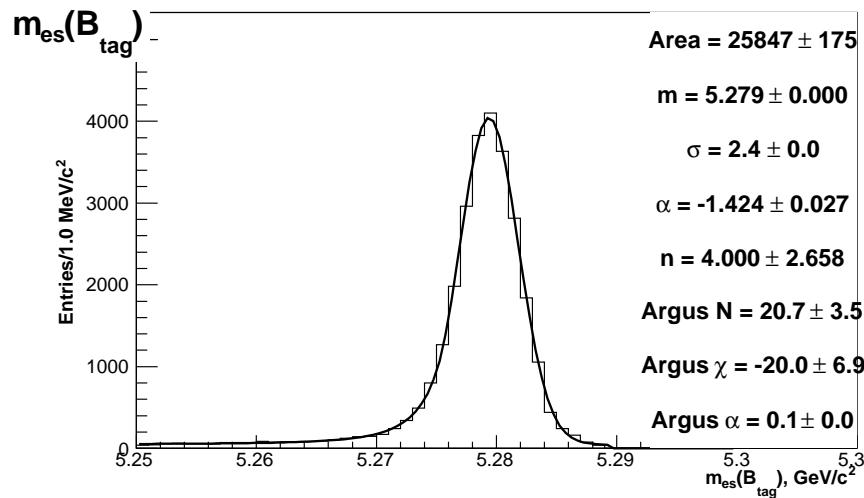

Sig:  $B_{recoil} \rightarrow \tau\nu, \tau \rightarrow \mu\nu\nu$

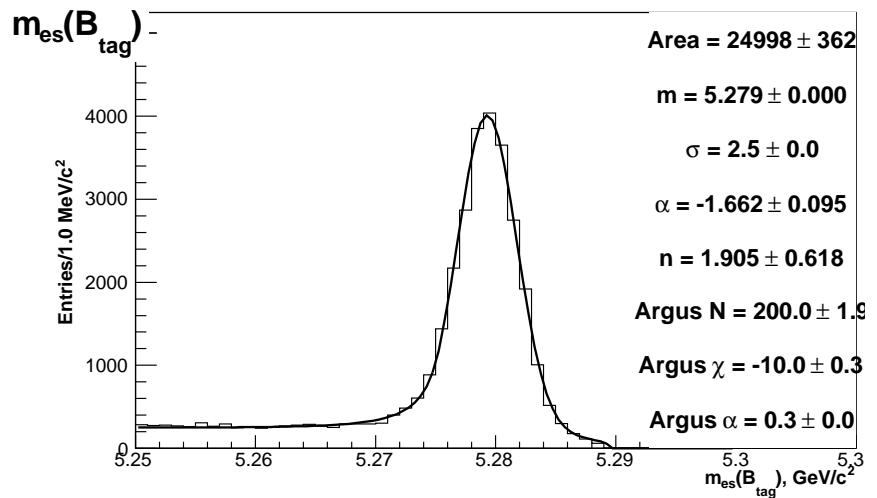

Bkg:  $B_{recoil} \rightarrow \pi^0\mu\nu$

Bkg: very special case with almost the same branching and only two extra photons

$m_{ES}$  in signal sample

$m_{ES}$  in bkg sample

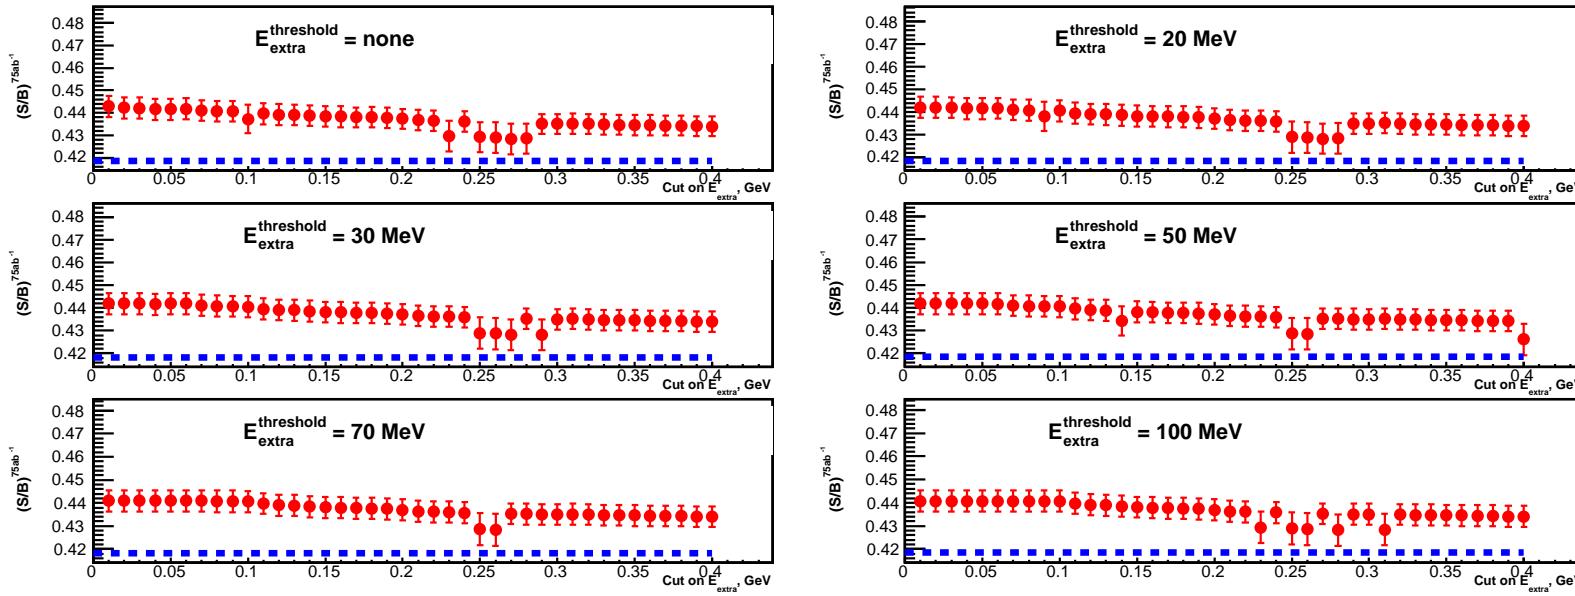

- Cut on different values of  $E_{extra}$  in Backward EMC
- Fit for the peak yield after each cut
- Plot peak yields vs. cut values

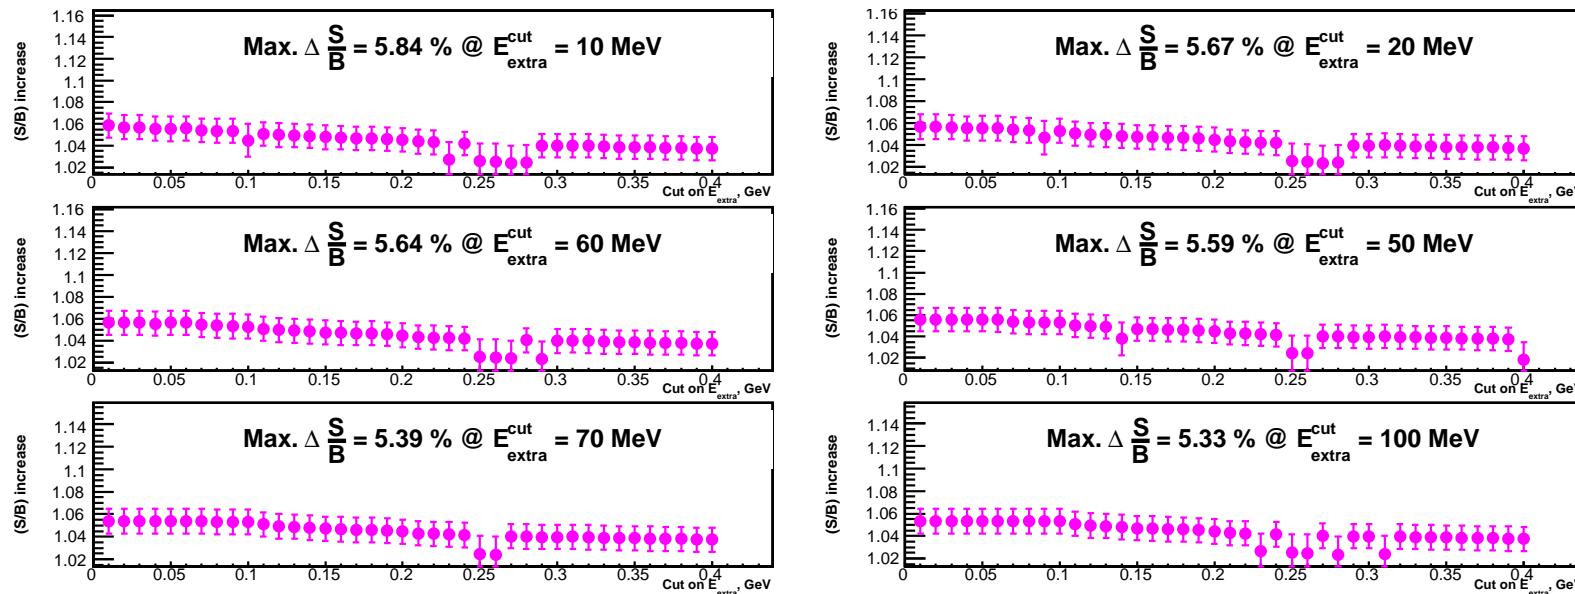

# $S/B$ ratio at $75 \text{ ab}^{-1}$

Absolute value

Relative increase

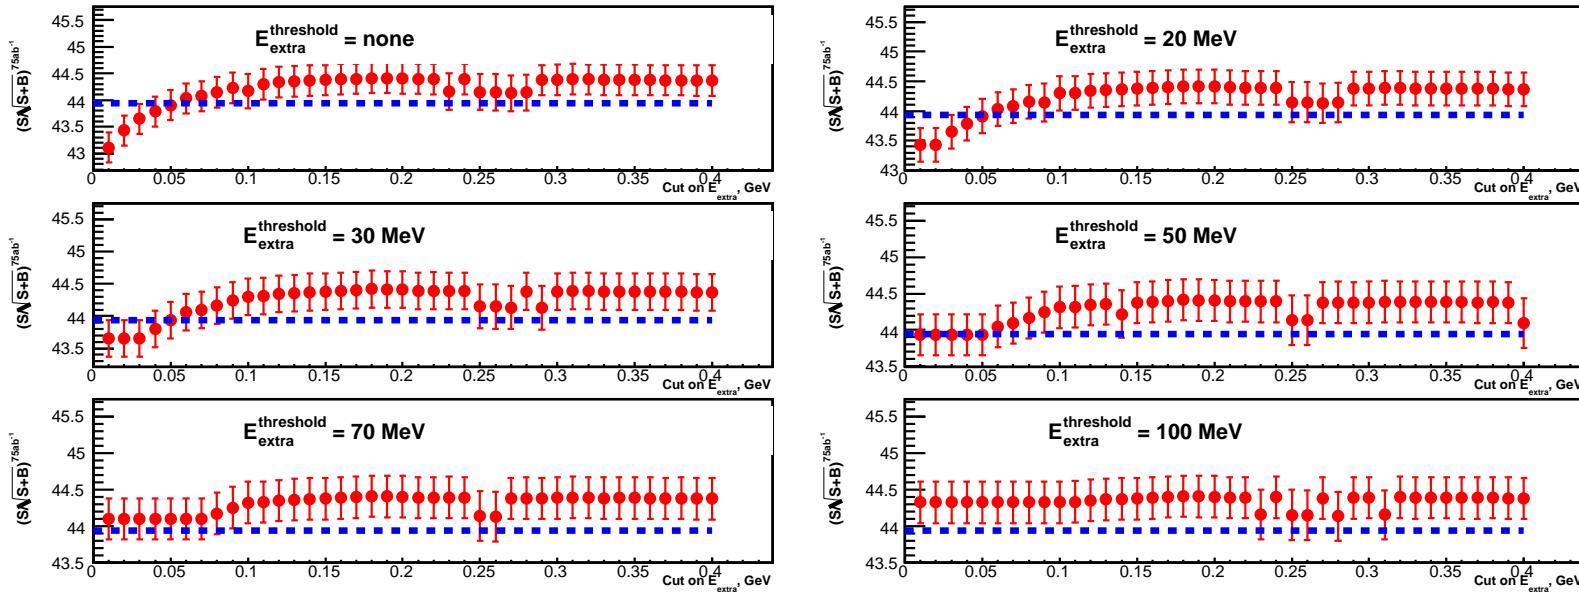

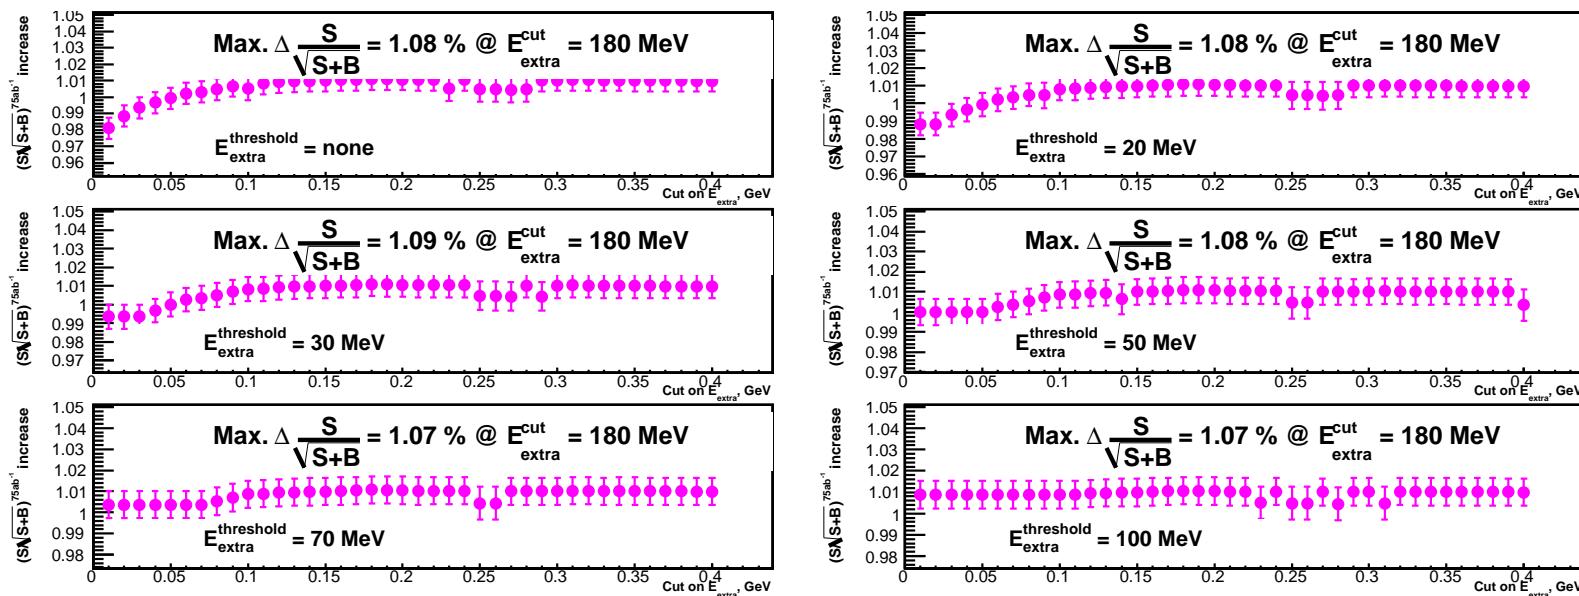

# $S/\sqrt{S+B}$ at $75 \text{ ab}^{-1}$

Absolute value

# Conclusion

- Cutting on  $E_{extra}$  in Backward EMC for V0.2.6 increases:
  - ☞  $S/B$  by  $\sim 15\text{-}20\%$  depending on  $\tau$  decay mode
  - ☞  $S/\sqrt{S+B}$  by  $\sim 3\text{-}5\%$
- Using a different FastSim version (V0.2.7) with proper energy smearing changes these numbers insignificantly
- Using the latest patches also changes these numbers insignificantly
- Using bwd photons in  $B_{tag}$  and  $B_{recoil}$  reconstruction also changes these numbers insignificantly
