

Theoretical progress on cusp effect and $Kl4$

Tuesday, 22 May 2007 17:20 (30 minutes)

Data on hadronic reactions have become so precise by now that one has to take into account radiative corrections as completely as possible. My talk will concentrate on this issue from a theoretical point of view, for $K \rightarrow 3\pi$ and K_{e4} decays.

Presenter: Prof. GASSER, Juerg (Berna University)

Session Classification: Session III

Track Classification: Low energy QCD
