VERITAS latest results

Wednesday, 22 June 2016 12:40 (25 minutes)

VERITAS is an array of four imaging atmospheric Cherenkov telescopes near Tucson, Arizona and is one of the world's most sensitive detectors of very high energy (VHE: >100 GeV) gamma rays and cosmic rays. The scientific reach of VERITAS covers the study of both Extragalactic and Galactic objects and the search for astrophysical Dark Matter. In this talk I will discuss the status of VERITAS operations and present a selection of recent results.

Presenter: Prof. HANNA, David (McGill University)

Session Classification: CR and Gamma
