

# RIDOS: Real-Time Ion Dose Planning and Delivery System (2014-2015)

PI: Simona Giordanengo - INFN - Torino

INFN RESEARCH PROJECT (Grant for Young Researcher CSN5 call 2013)

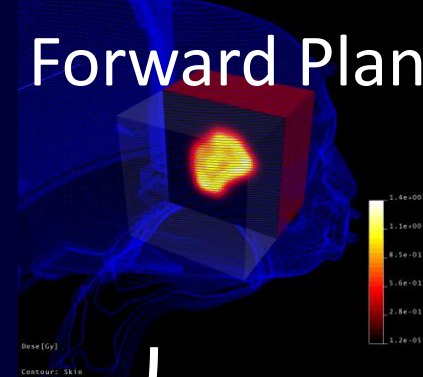

Dose Delivery System

Target tracking system

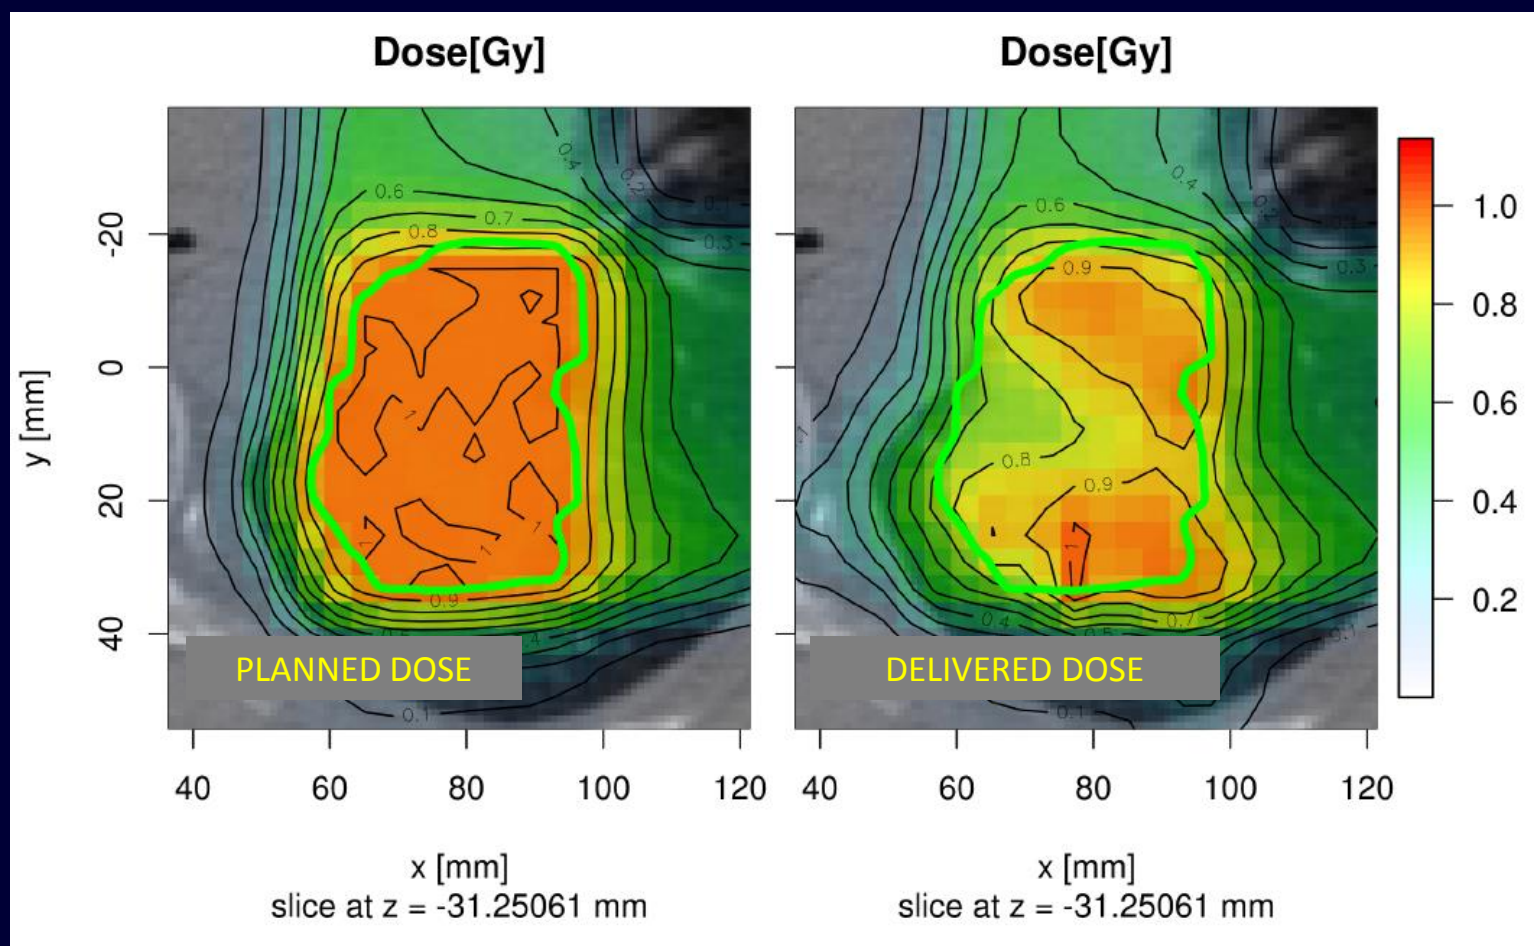

Fast GPU-based Forward Planning

- RIDOS checks ON-LINE the uncertainties in the delivered DOSE DISTRIBUTIONS due to measured patient and beam deviations from planned conditions.
- RIDOS provides an integrated platform for adaptive therapy at CNAO

# RIDOS goal

Calculate online the dose distribution, using measured data of the beams and of the patient's movement.

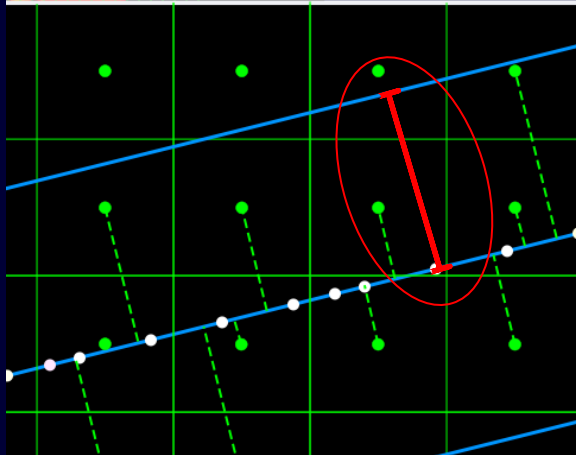

# RIDOS deliverables

- D1: **Fast Forward Planning** implementation with CUDA porting of the PlanKIT TPS libraries
- D2: **HW Instrumentation to integrate** existing on-line data provided by the CNAO dose delivery and target tracking systems **with** the fast GPU-based dose computation **and to show** results in the CNAO local control room

# D1: RIDOS-Fast Forward Planning versions

- RIDOS-FP\_Old : - Only protons, not optimized
- RIDOS-FP\_1.0 : - New RayTracing + Optimizations
- RIDOS-FP\_2.0: - Memory optimizations (worst time performance)*
- RIDOS-FP\_3.0:** - Voxel Pre-selection
- RIDOS-FP\_1.1:**
  - Biological Dose (also carbon ion dose)
  - 4D (Versatility to manage 4D-CT and provide several doses)

# D1: RIDOS-Fast Forward Planning performances

Computing Grid = 170x170x125;  
N of Rays = 1248; N of slice = 39;

Entire  
treatment  
↓

Per  
spill  
↓

Radial cut-off (mm)	Number of voxels	RIDOS F-FP time (s)	PlanKIT FP time (s)	Gain
20	44678	1.35	150	110
40	178702	2.33	600	270
50	279243	2.76	1000	350
80	714861	4.68	2500	500

# D1: RIDOS-Fast Forward Planning results

## F-FP for a treatment with Carbon ions

Dose (PlanKIT) [Gy]

Dose (GPU) [Gy]

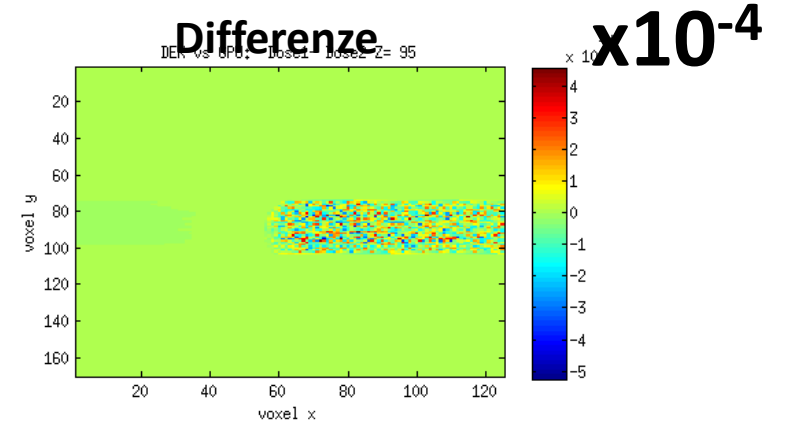

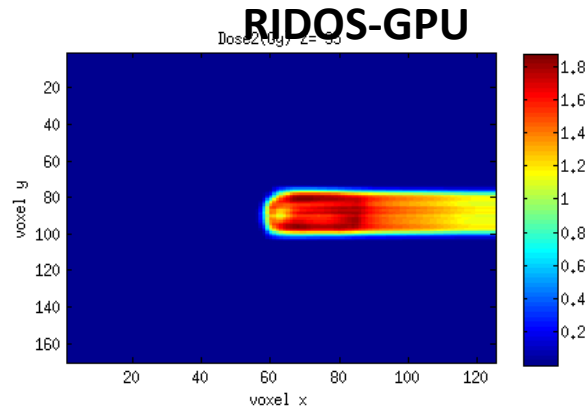

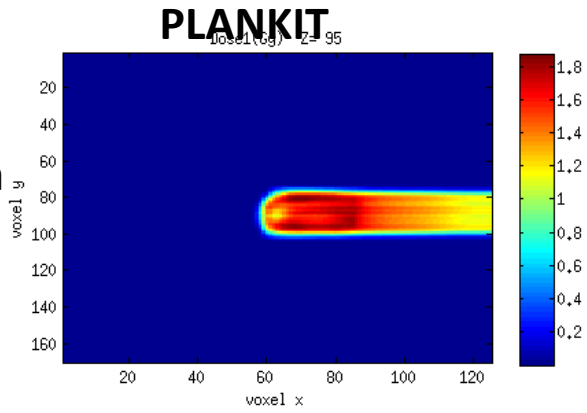

Differences [Gy]

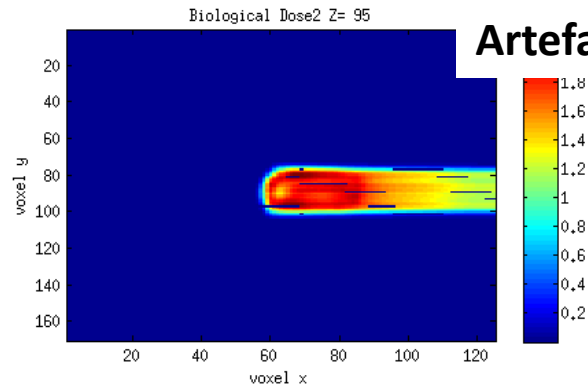

Computing Grid = 170x170x127;  
N of Rays = 10761; N of slice = 51;  
N voxels= 7292; radial cut-off=10 mm.

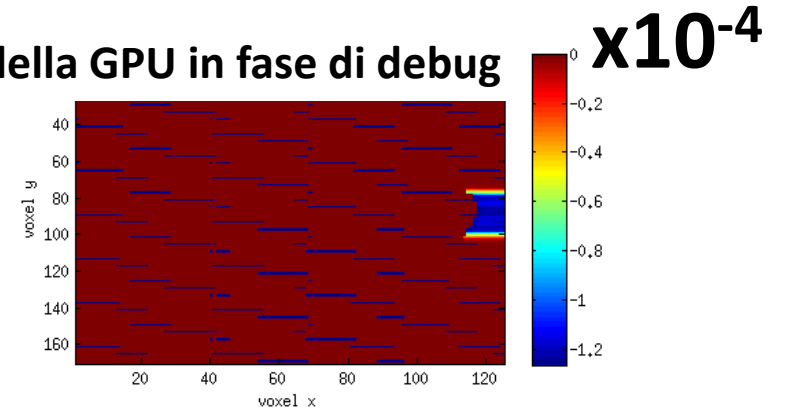

# Dose Fisica

# RBE

# D2: RIDOS HW Interfaces

**SPILL DELIVERED DOSE MONITOR  
(Matlab-based GUI)**

WS with GPU  
TESLA k40c

Tested at CNAO (July 2015)

*Beam monitors  
measurements from FPGAs of  
the DDS to the RIDOS FPGA*

*Delivered spots with  
measured characteristics  
for dose computation  
(TCP-IP communic tested)*

Trigger from DDS

DDS

**Respiratory Phase and  
Surrogate target motions measurements**

Under development

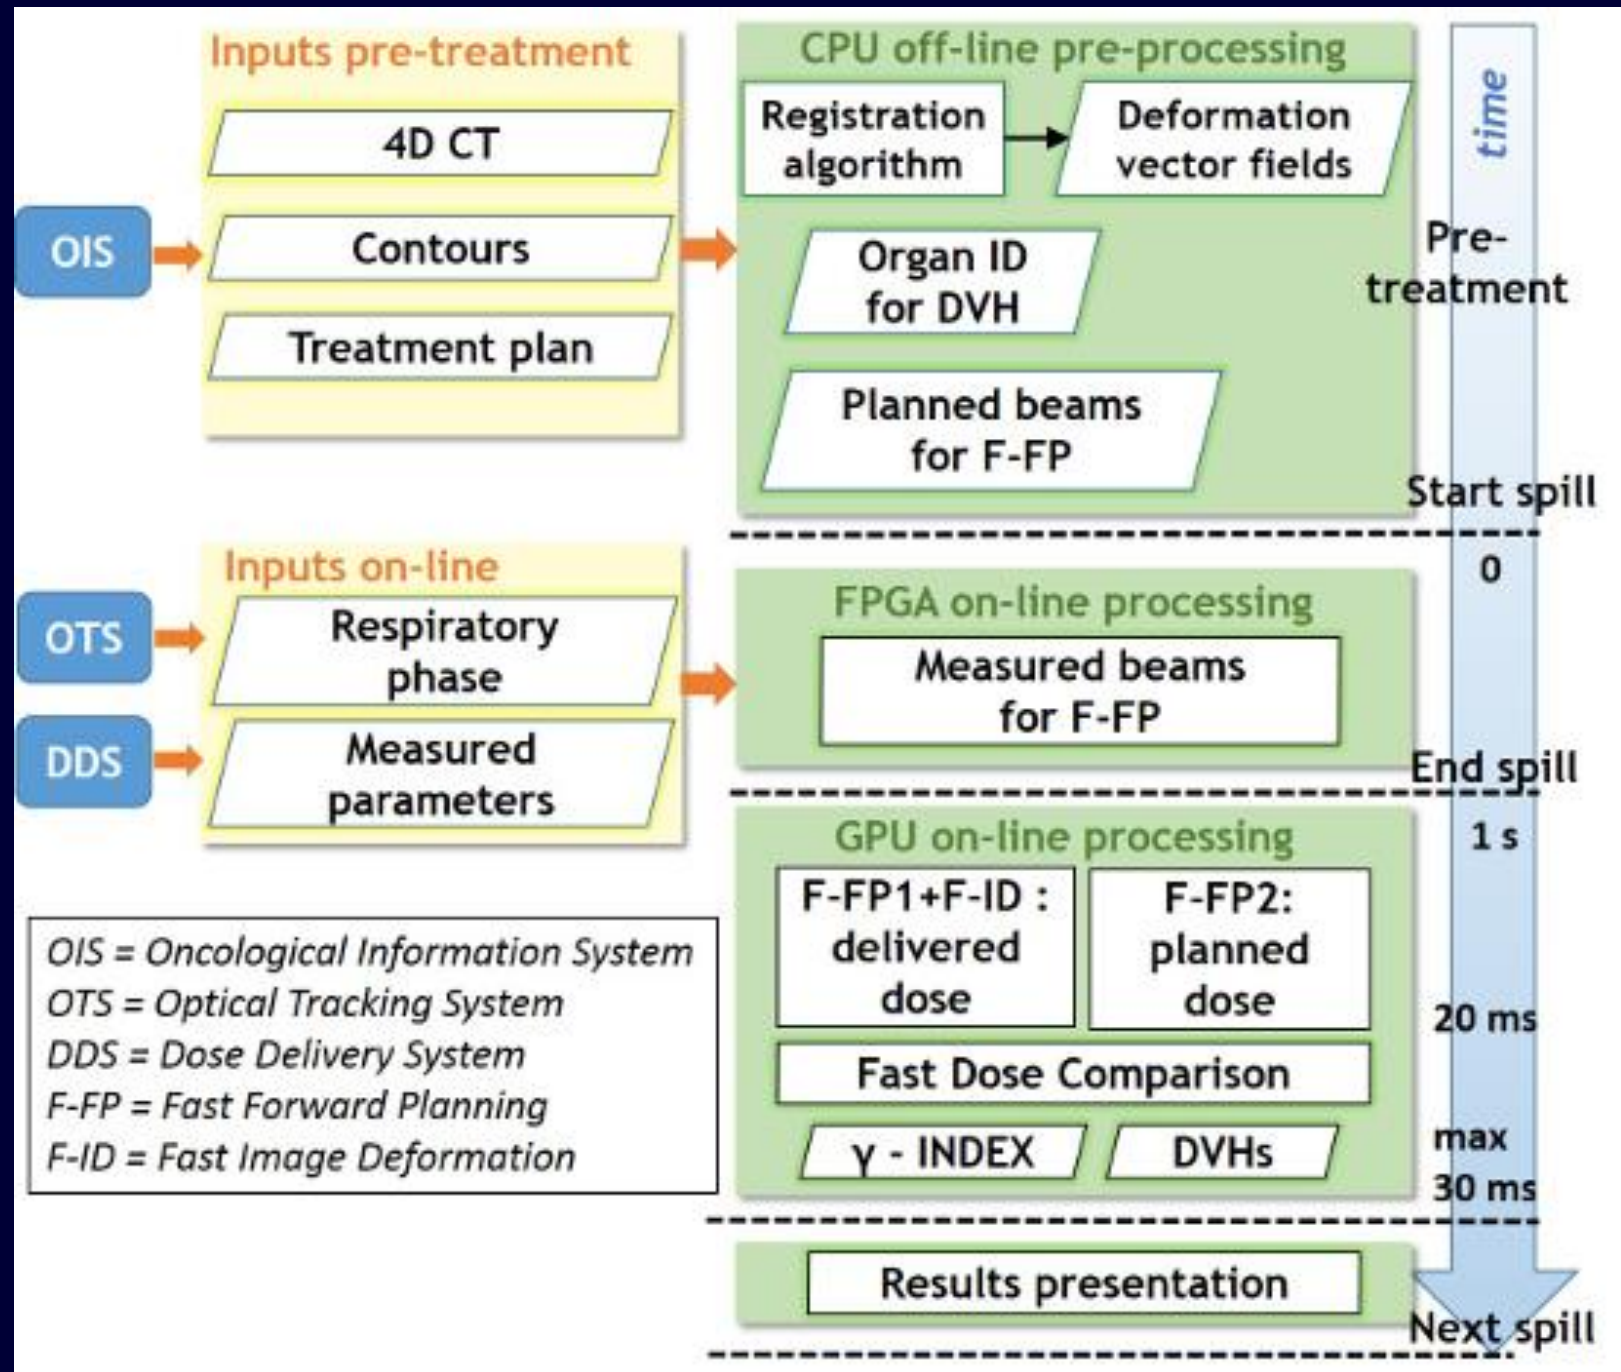

NI-PXIe chassis with CPU and FPGA modules to  
interface the DDS with the dose computation

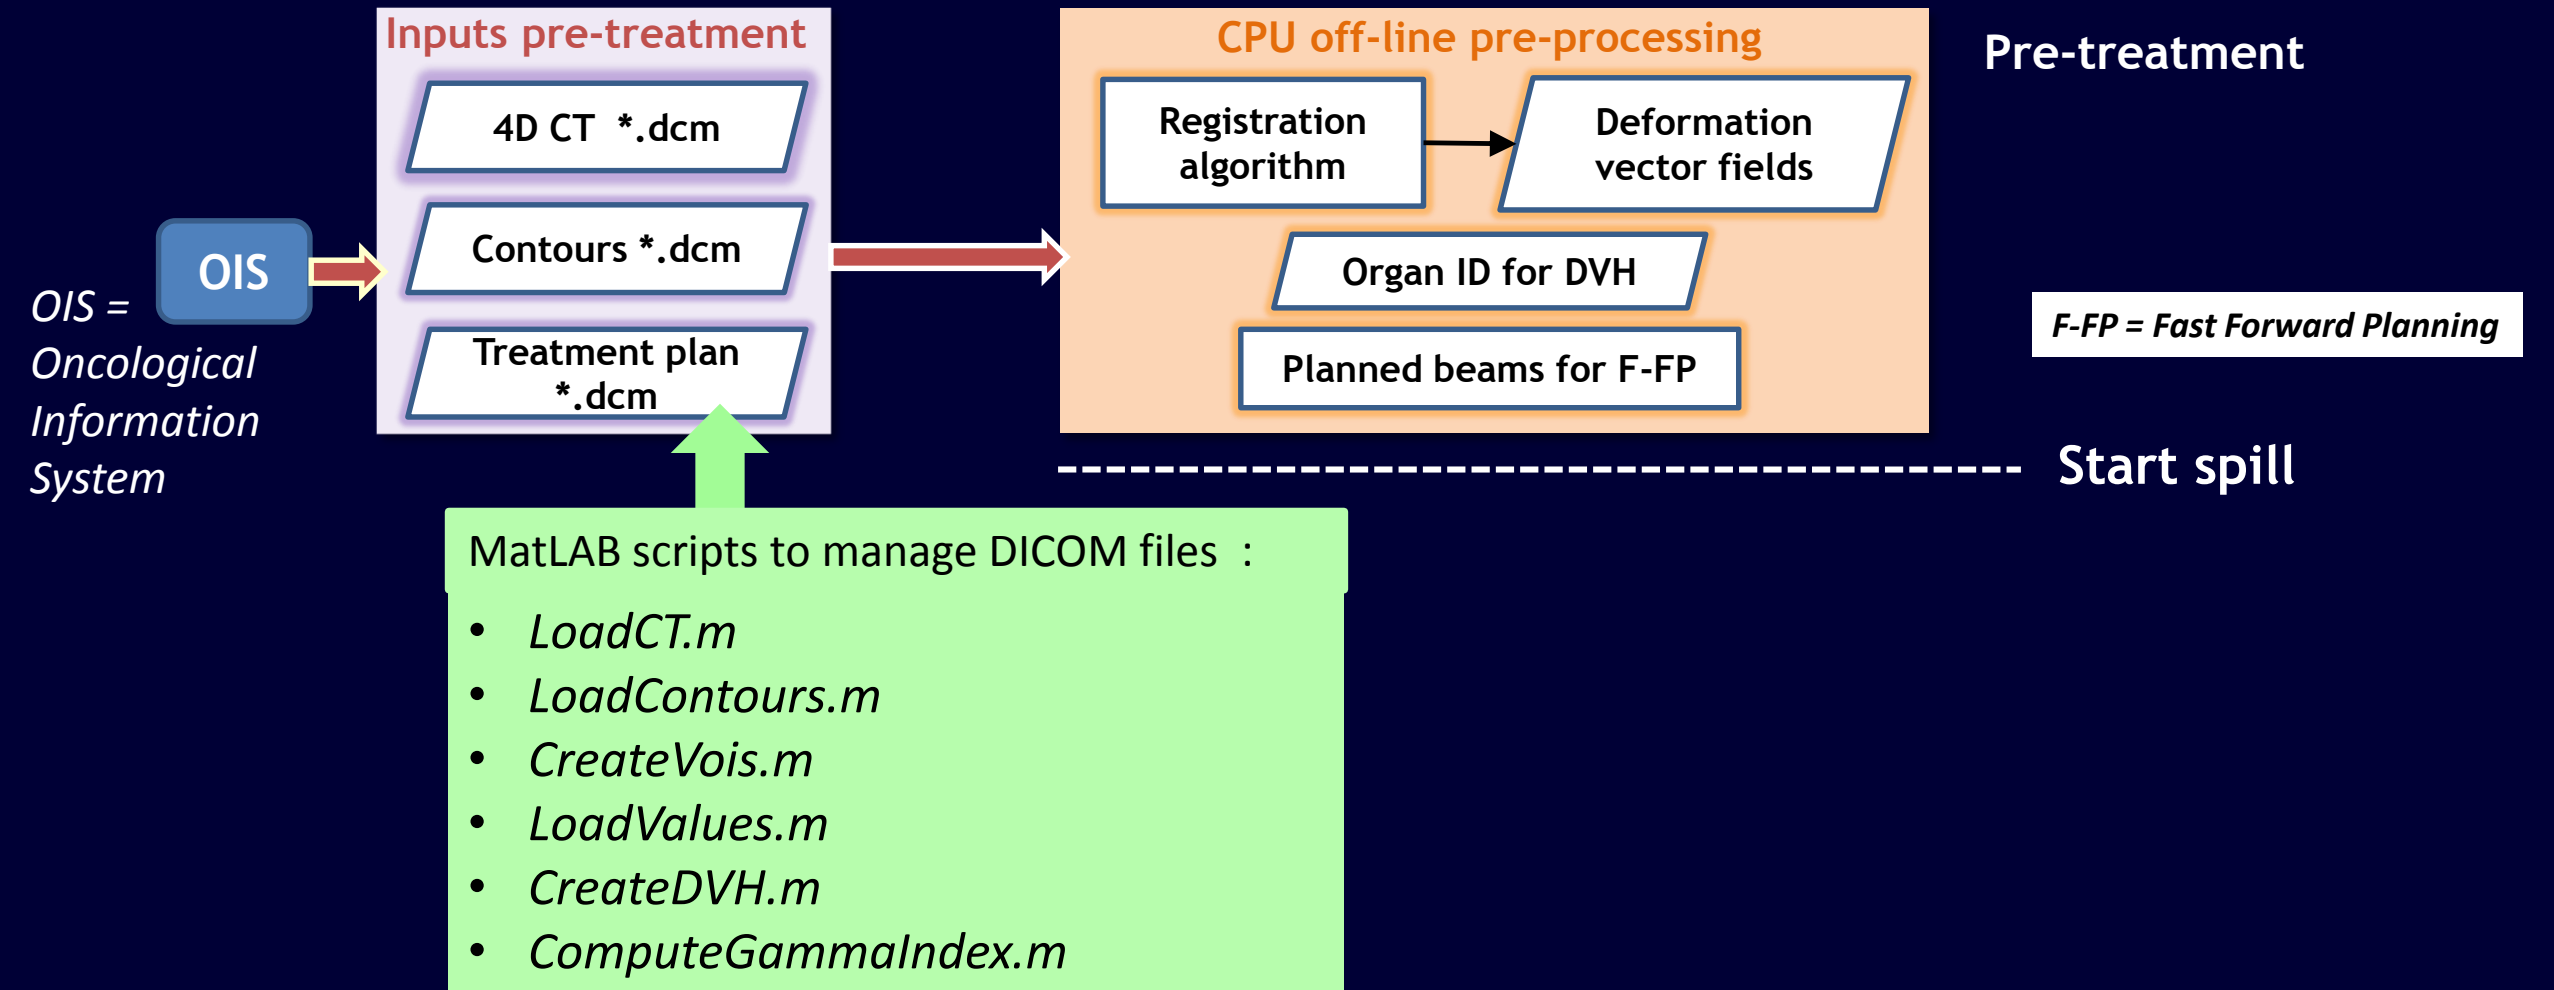

CNAO Dose Delivery cabinet

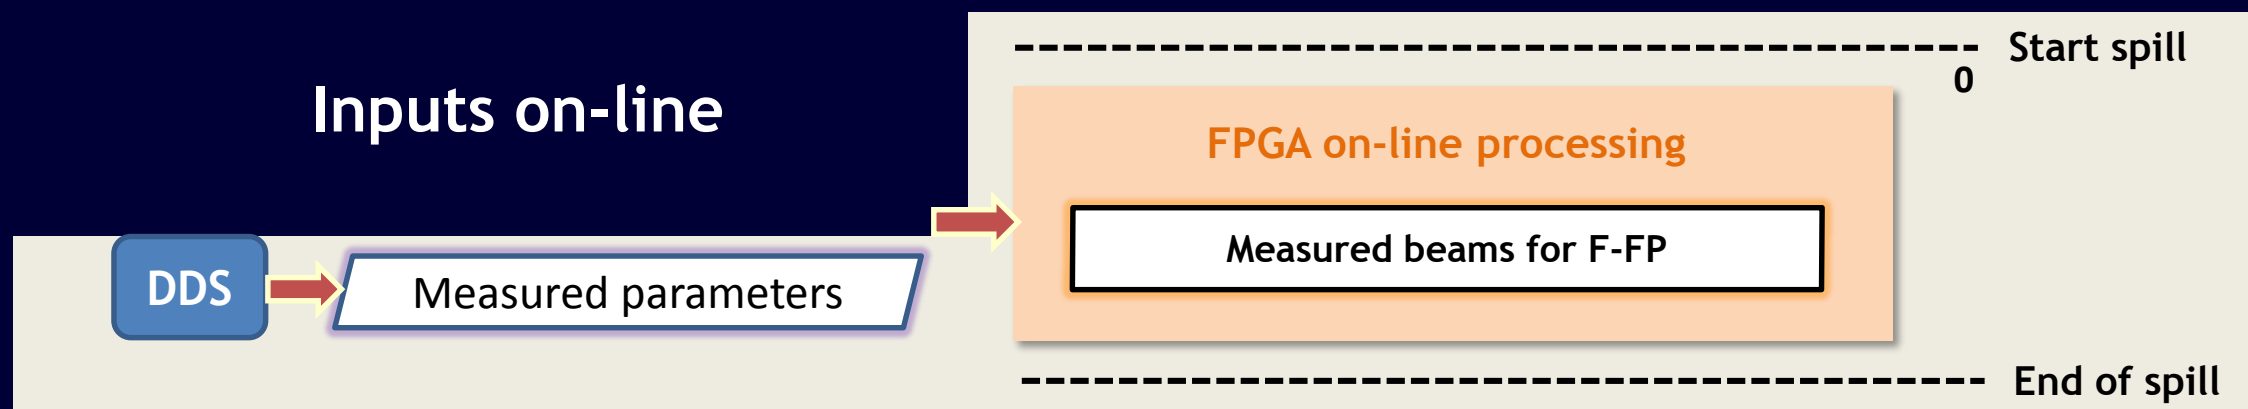

D2:  
 SW tools  
 SW interfaces  
 DATA management

# INPUT data Pre-treatment and Pre-Processing

# On-line input data and FPGA processing

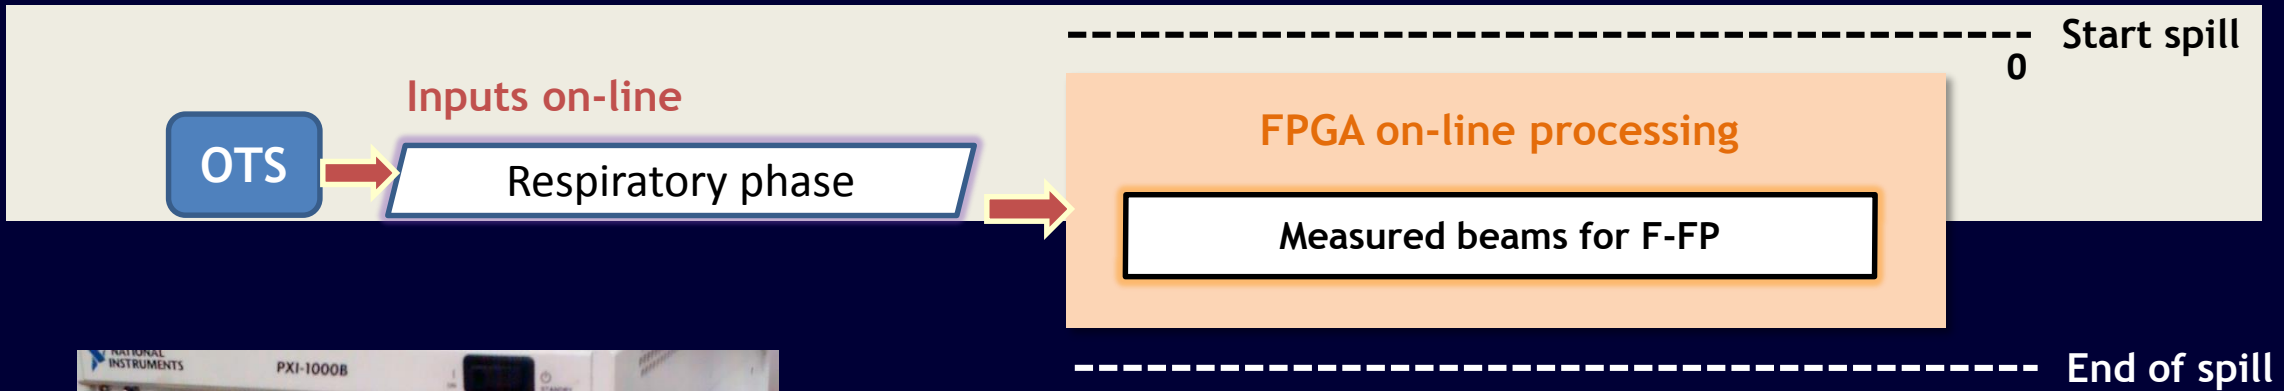

## DDS-RIDOS FPGA firmware + interface with WS

**DONE:** cables and protocols to receive on-line DD data from FPGA-CNAO (Integral chambers measurements) to FPGA-RIDOS; data transfer to RIDOS controller via FIFO-DMA; file .beam creation.

**TO DO:** select useful data, send to WS and test overall time

# On-line input data and FPGA processing

**OTS-RIDOS-FPGA: the old Organ Motion Compensator should be used as OTS, hw and firmware ready**

*OTS = Optical Tracking System  
DDS = Dose Delivery System  
F-FP = Fast Forward Planning*

# GPU on-line processing

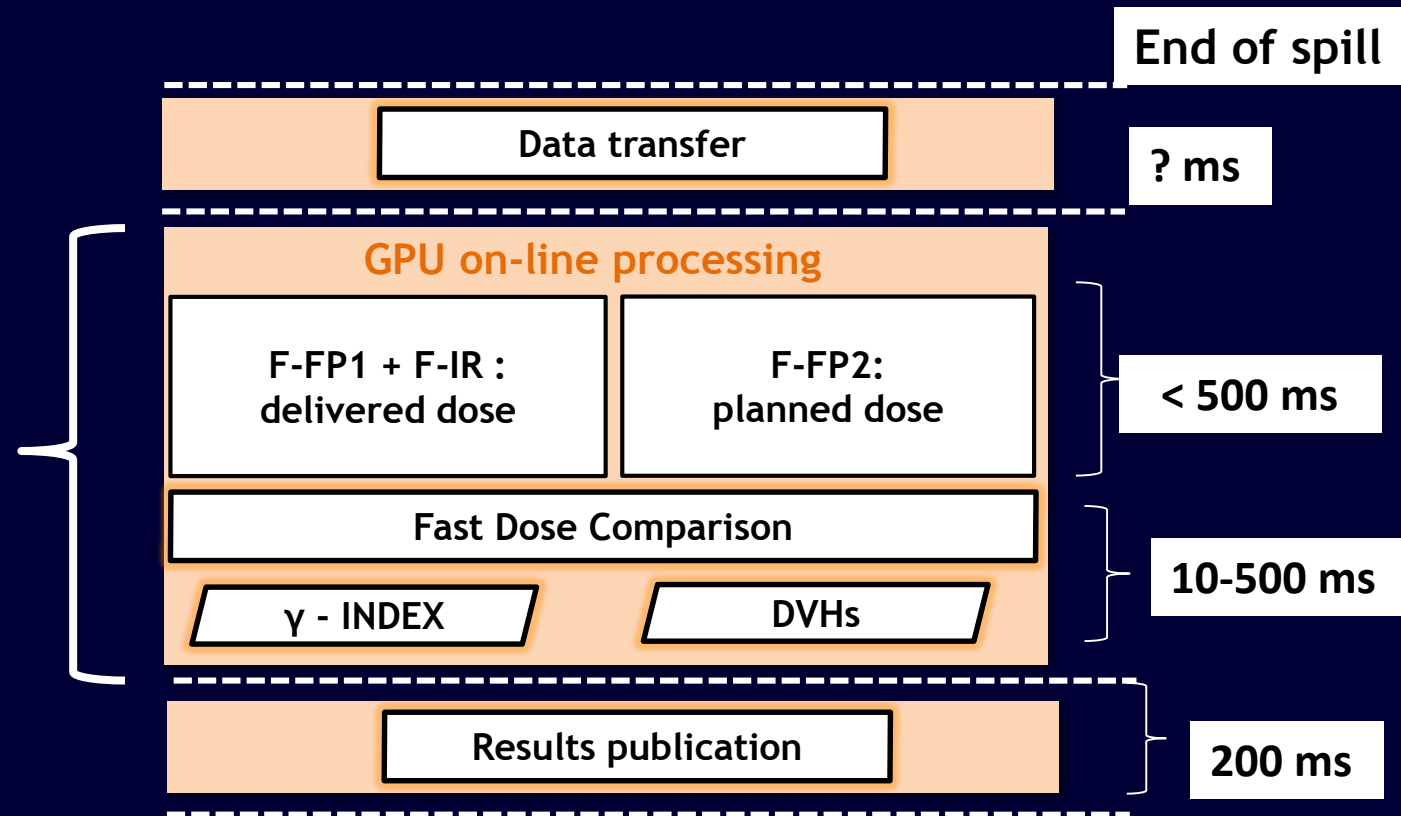

Main tools on GPU:

1 Forward Planning  
(DONE)

$\gamma$  - INDEX (DONE)

DVHs (TO DO)

Useful for WP-11

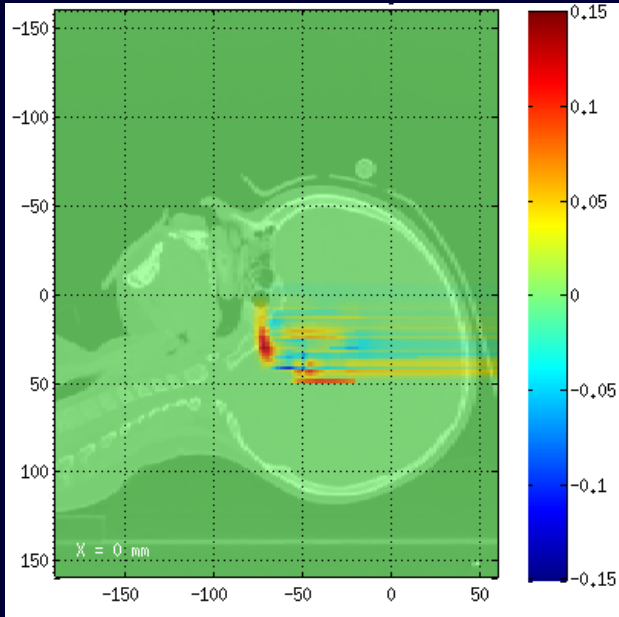

# Example of Dose comparison

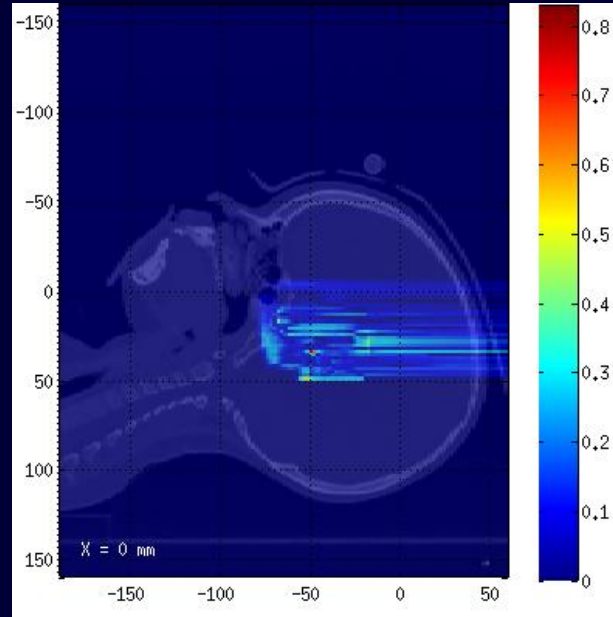

Planned Dose (Gy)

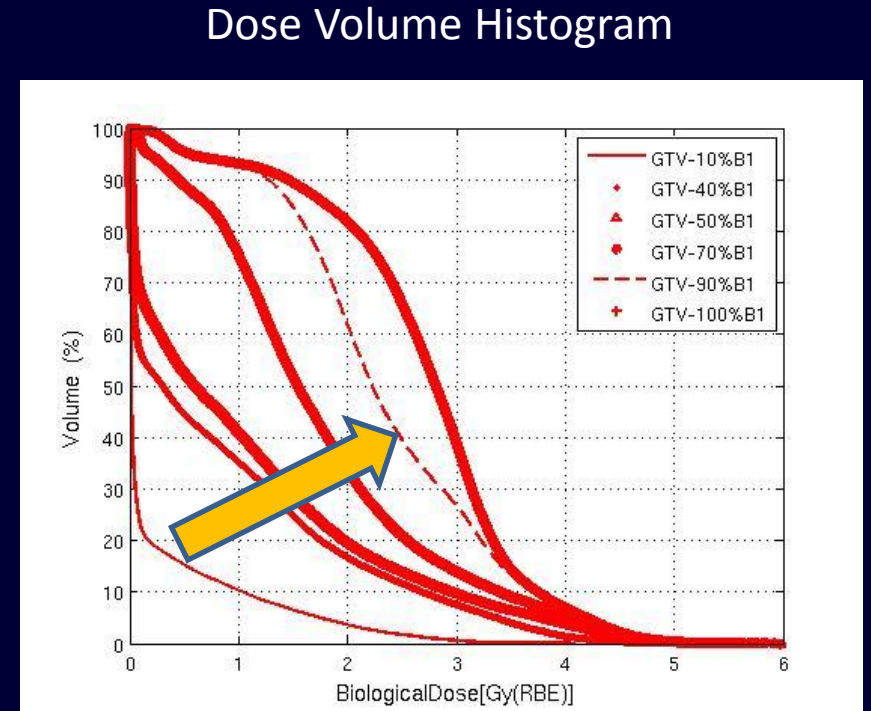

Delivered Dose (Gy)

Dose Difference (Gy)

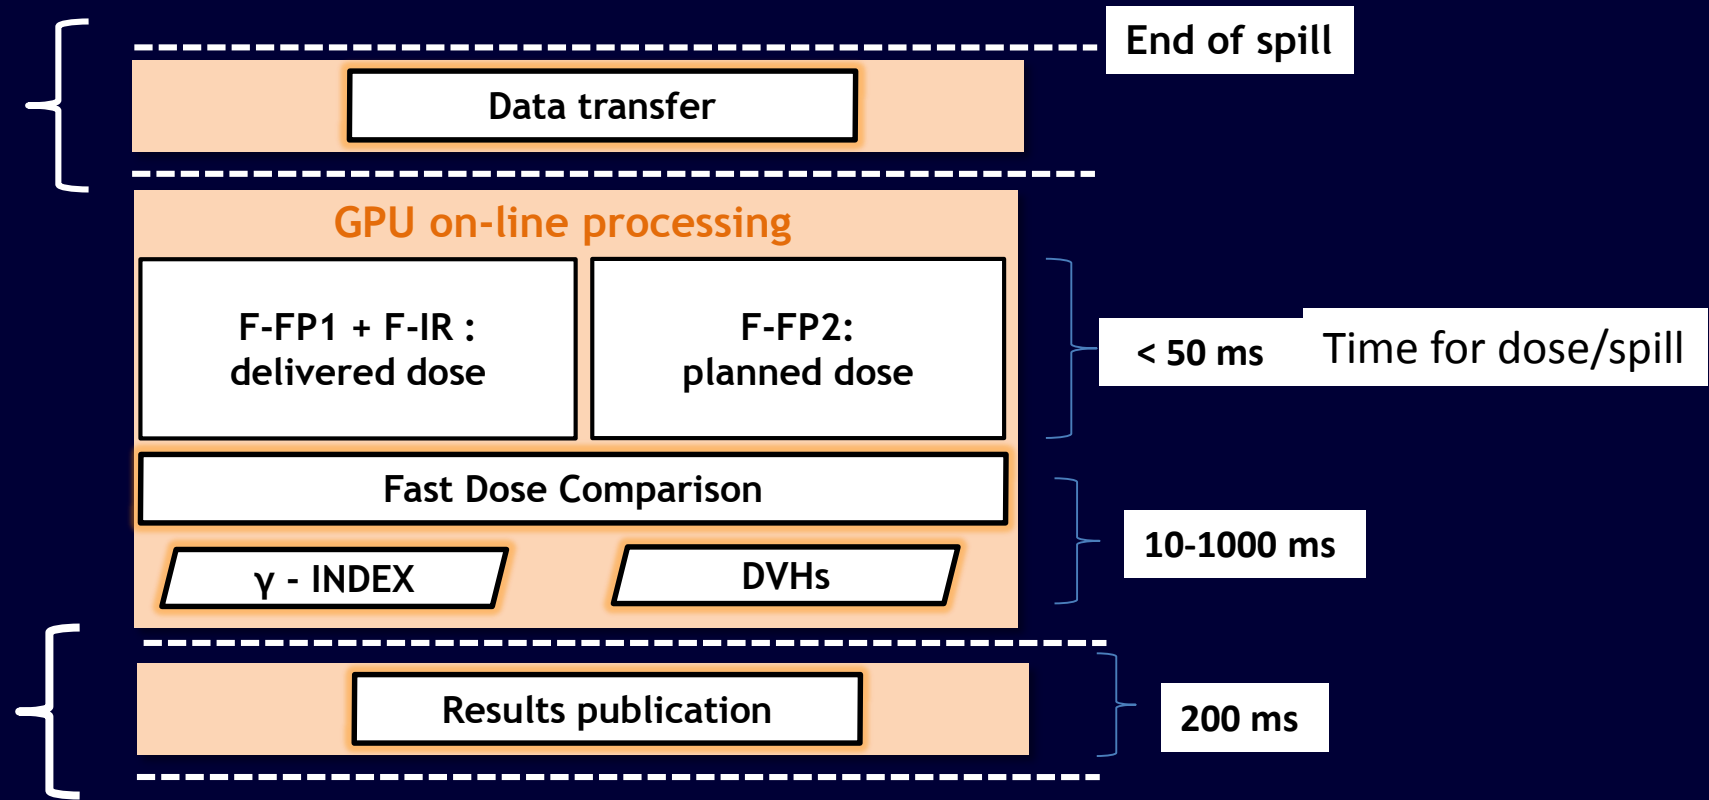

Gamma Index  
DD=3% DTA=3mm

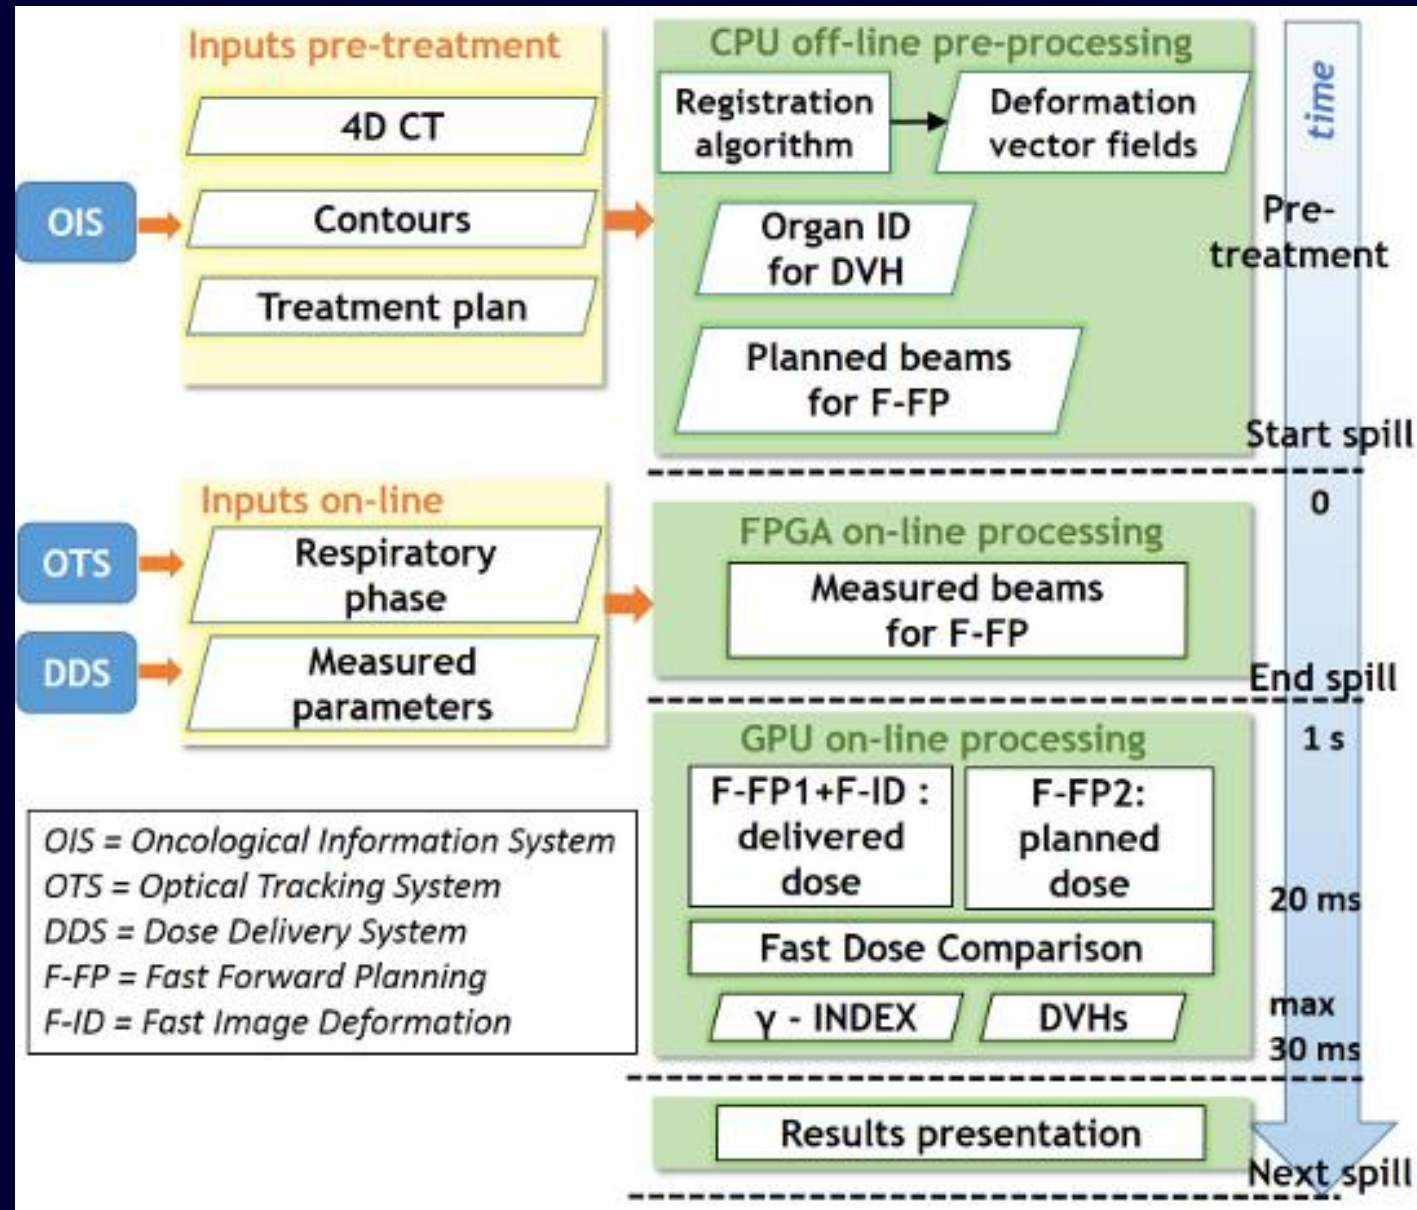

DVH all'aumentare degli spill

# CPU-GPU data sharing: RIDOS-GUI

MatLAB-based GUI  
underdevelopment

# RIDOS 2016: commissioning at CNAO

- **WP11: Commissioning of an integrated platform for real-time and fast-MC dose calculation at CNAO**

M1: Testare e validare con 10 pazienti reali del CNAO (5 protoni e 5 carbonio) l'accuratezza di nuovi metodi-algoritmi per il calcolo veloce della dose per adroterapia utilizzando il sistema RIDOS, sviluppato in un progetto di CSN5 (Grant Giovani 2013).

L'integrazione finale di tutti i processi e strumenti e' in ritardo di 2/3 mesi e cosi' anche il primo test a CNAO

L'interfaccia con l'OTS è ferma per mancanza di persone lato OTS

La maggior parte delle *milestones* sono state raggiunte e con l'approvazione del WP11 per il 2016 il sistema verrà testato e messo a disposizione dei fisici medici del CNAO

## → Parliamone partendo per esempio da:

- [?] RIDOS per ciclotrone
- [?] Integrazione di nuovi algoritmi (come Fred) per il calcolo della dose
- [?] Integrazione di nuovi input al calcolo della dose
- [?] Implementazione della parte di ottimizzazione del TPS su GPU
- [?] Disegno di un nuovo progetto per l'implementazione clinica dell'adaptive therapy partendo dall'esperienza e competenze di RIDOS e di tutta la comunità di RDH-IRPT
