Inclusive heavy flavour production in the dipole picture

lunedì 5 settembre 2016 11:50 (20 minuti)

I report on recent results for heavy flavour (b,c-jets as well as open heavy flavour) production processes in the dipole picture and their relation to those in k_T -factorisation. B-jet and B-meson transverse momentum and rapidity distributions are compared to the recent LHC data for several models of unintegrated gluon distributions in the target proton.
