Motivation

Meson properties in an isospin and/or strangeness rich medium are important in many phenomena, such as the astrophysics of compact stars, heavy-ion collision and nuclear reactions.

It is important to have a model that incorporates isospin chemical potential μ_I and strangeness chemical potential μ_S .

The presence of chemical potentials can drastically change properties of mesons like their mass spectrum and life-time.

$$\cos \alpha_{K} = \left(\frac{m_{K}}{\frac{1}{2}\mu_{I} + \mu_{S}}\right)^{2}, \quad \bar{\Sigma}_{K} = \left(\begin{array}{ccc} \cos \alpha_{K} & 0 & \sin \alpha_{K} \\ 0 & 1 & 0 \\ -\sin \alpha_{K} & 0 & \cos \alpha_{K} \end{array}\right)$$

Masses and Mixing

Masses and Mixing

Approach

We use group theory to study the symmetry breaking pattern and to constraint the mixing possibilities of mesons \Rightarrow simplified calculation

Breaking pattern

$$\begin{array}{cccc} SU(3)_L \times SU(3)_R & & \\ \downarrow & \longleftarrow & Masses \\ SU(3)_V & \\ \downarrow & \longleftarrow & v^{\nu} = v^{\mu} = 2\mu \delta^{\mu 0} \\ U(1)_{L+R} \times U(1)_{L+R} & & \end{array}$$

└─ Masses and Mixing

Symmetries and mixing

SU(2) subgroups of SU(3)

T-spin, U-spin, V-spin label the meson states also in the broken phases

Mixing states

Mixing states	(T, U)	
π_+, π	(1, 1/2)	
K_+, K	(1/2, 1/2)	
K_0, \bar{K}_0	(1/2, 1)	

Masses and Mixing

$$\pi^{\mathsf{0}}$$
 and η mixing

Pion condensation phase

The vacuum has a charge proportional to λ_2 . $[\lambda_2, T] = 0 \Rightarrow$ the eigenstates are $|T = 1, T_3 = 0\rangle = |\pi_0\rangle$ and $|T = 0, T_3 = 0\rangle = |\eta\rangle \Rightarrow$ no mixing.

Kaon condensation phase

The vacuum has a charge proportional to λ_5 . $[\lambda_5, U] = 0 \Rightarrow$ the eigenstates are $|U = 1, U_3 = 0\rangle = \frac{|\pi_0\rangle + \sqrt{3}|\eta\rangle}{2}$ and $|U = 0, U_3 = 0\rangle = \frac{\sqrt{3}|\pi_0\rangle - |\eta\rangle}{2} \Rightarrow$ mixing.

Application to meson decays

Leptonic Decays

Decays

The main pion decay channels at 0 chemical potential are:

$$\pi^+ \to \ell^+ \nu_\ell \qquad \pi^- \to \ell^- \bar{\nu}_\ell$$

$$\Gamma^0_{\pi \to \ell \nu_\ell} = \frac{G_F^2 F_0^2 V_{ud}^2 m_\ell^2 m_\pi}{4\pi} \left(1 - \frac{m_\ell^2}{m_\pi^2}\right)^2$$

Normal phase

$$m^\pm_\pi o m_\pi \mp \mu_I \Rightarrow \Gamma^0_{\pi^+ o \ell^+
u_\ell} = 0 \; ext{ for } \mu_I = m_\pi - m_\ell$$

Application to meson decays

Leptonic decays

Pion condensation phase

 $\tilde{\pi}^+$ is massless, but $\tilde{\pi}^-$ is a combination of π^+ and π^-

$$\frac{\Gamma_{\tilde{\pi}_{-} \to \ell^{+} \nu_{\ell}}}{\Gamma_{\pi \to \ell \nu_{\ell}}^{0}} = \frac{|U_{21}^{*} \cos \alpha_{\pi} + iU_{22}^{*}|^{2}}{2} \frac{m_{\tilde{\pi}^{-}}}{m_{\pi}} \left(\frac{1 - m_{\ell}^{2}/m_{\tilde{\pi}^{-}}^{2}}{1 - m_{\ell}^{2}/m_{\pi}^{2}}\right)^{2}$$

$$\frac{\Gamma_{\tilde{\pi}_{-} \to \ell^{-} \bar{\nu}_{\ell}}}{\Gamma_{\pi \to \ell \nu_{\ell}}^{0}} = \frac{|U_{21}^{*} \cos \alpha_{\pi} - iU_{22}^{*}|^{2}}{2} \frac{m_{\tilde{\pi}^{-}}}{m_{\pi}} \left(\frac{1 - m_{\ell}^{2}/m_{\pi}^{2}}{1 - m_{\ell}^{2}/m_{\pi}^{2}}\right)^{2}$$

- Conclusion

Conclusion

Model

Meson physics in an isospin and strangeness rich medium can be described by appropriate external sources in Chiral Perturbation Theory

Phases

Chemical potentials imply the existence of a normal phase, a pion condensation phase and a kaon condensation phase

◆□▶ ◆□▶ ◆三▶ ◆三▶ 三三 のへぐ

- Conclusion

Conclusion

In the normal phase only linear shifts in the masses are permitted. In the condensed phases the ground state aquires a charge. The masses are complicated functions of the chemical potentials.

Chemical potentials can greatly enhance or suppress the decay channels.

In the condensed phases the mixing factors gives contributions to the decay widths and open channels like $\Gamma_{\tilde{\pi}_{-} \rightarrow \ell^{+} \nu_{\ell}}$.

 χPT permits to calculate all the thermodynamic observables. It is in good agreement with predictions made by lattice methods. - Conclusion

Conclusions

Applications

- Kaon decays
- Heavy-ion physics
- Astrophysics (compact stars)
- Nuclear physics (nuclear decays)

Extension

Including baryons in the model (work in progress)
