$$\vec{F} = G \frac{Mm}{r^2} \vec{u}_r$$

Gravity is a manifestation of spacetime curvature induced by mass-energy

$$G_{\mu\nu} = \frac{8\pi G}{c^4} T_{\mu\nu}$$

*“Spacetime tells matter how to move; matter
tells spacetime how to curve”
(John Archibald Wheeler)*

Gravitational Waves

Comparison with electromagnetic waves

The so-called “electromagnetic theory of light” has not helped us hitherto . . . it seems to me that it is rather a backward step . . . the one thing about it that seems intelligible to me, I do not think is admissible . . . That there should be an electric displacement perpendicular to the line of propagation’

Lord Kelvin

Roma 1988

Some perspective: 50 years of attempts at detection:

Since the pioneering work of Joseph Weber in the '60, the search for Gravitational Waves has never stopped, with an increasing effort of manpower and ingenuity:

UNIVERSITY OF MARYLAND

60': Joe Weber pioneering work

90': Cryogenic Bars

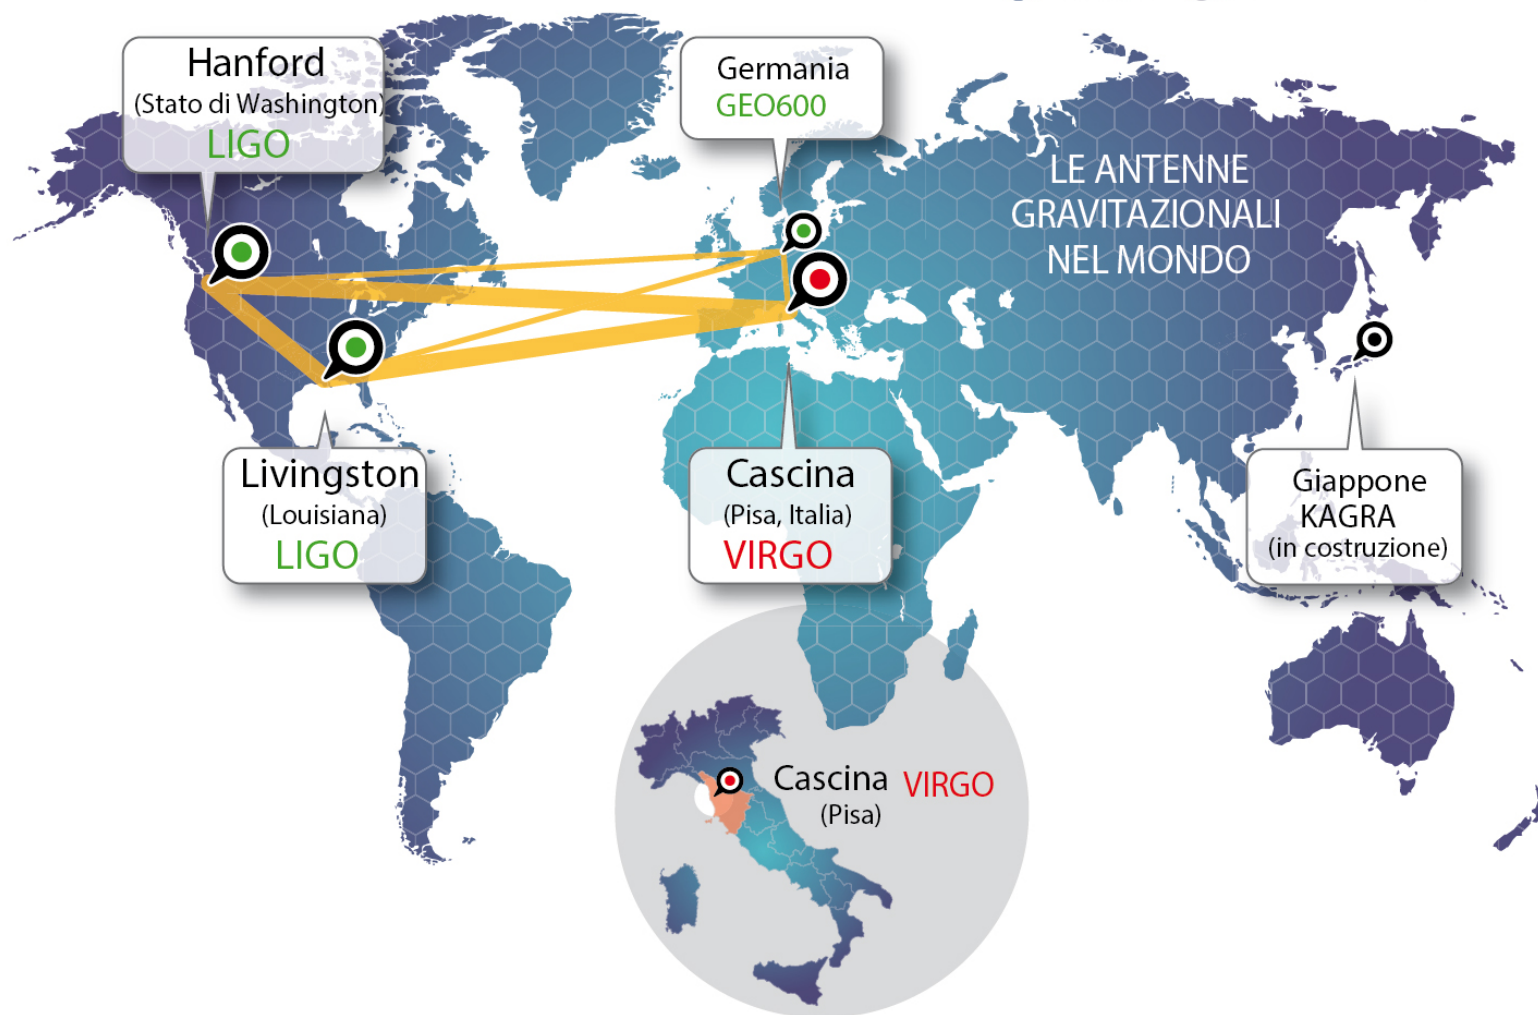

1997: GWIC was formed

2000' - : Large Interferometers

- Top row left – Hanford
- Top row right – Livingston
- Time difference ~ 6.9 ms with Livingston first
- Second row – calculated GW strain using Numerical Relativity Waveforms for quoted parameters compared to reconstructed waveforms (Shaded)
- Third Row –residuals
- Bottom row – time frequency plot showing frequency increases with time (chirp) 

September 14th, 2015 at 09:50:45 UTC

$$\mathcal{M} = \frac{(m_1 m_2)^{3/5}}{(m_1 + m_2)^{1/5}} = \frac{c^3}{G} \left[\frac{5}{96} \pi^{-8/3} f^{-11/3} \dot{f} \right]^{3/5}$$

- Numerical relativity models of black hole horizons during coalescence
- Effective black hole separation in units of Schwarzschild radius ($R_s = 2GM_{\text{tot}}/c^2 = 210\text{km}$); and effective relative velocities given by post-Newtonian parameter $v/c = (GM_{\text{tot}}\pi f_{\text{GW}}/c^3)^{1/3}$

Binary Black Hole System

- $M_1 = 36 \text{ }^{+5}_{-4} M_{\text{sol}}$
- $M_2 = 29 \text{ }^{+/-} 4 M_{\text{sol}}$
- Final Mass = $62 \text{ }^{+/-} 4 M_{\text{sol}}$
- distance = $410 \text{ }^{+160}_{-180} \text{ Mpc}$ (redshift $z = 0.09$)

La Collaborazione Virgo

The international PhD school *Gran Sasso Science Institute* has started its educational and scientific activities in 2013, and is now at the end of its third year of life.

4 courses:

- *Astroparticle Physics*
- *Mathematics in Natural, Social and Life Science*
- *Computer Science*
- *Urban Studies*

36 PhD students selected in the first year 2013-2014

40 PhD students selected for the second year 2014-2015

40 PhD students selected for the third year 2015-2016

Also appointed: 28 Post-docs with two-years research grants

Director: E. Coccia

Coordinators: F. Vissani (INFN), P. Marcati (L'Aquila), R. De Nicola (IMT) , A. Calafati (Ancona).

Scientific Committee: F. Barca (MEF, Italy, Chair); R. Barbieri (SNS, Italy); B. Barish (Caltech, USA); S. Iammarino (London School of Economics, UK); A. Quarteroni (Politech. Losanna, CH); A. Sangiovanni Vincentelli (Berkley, USA).

An international PhD school and a center for advanced studies in physics, mathematics, computer science and social sciences.

La vie Lumière - Spettacolo-dialogo "I ragazzi di via Panisperna"

Mercoledì 6 Maggio, ore 20:30 sala rossa del GSSI. Spettacolo-dialogo "I ragazzi di via Panisperna". Con l'ausilio di sequenze del film di Gianni Amelio, verrà raccontata la storia del gruppo di giovani fisici le cui ricerche, negli anni '30 del secolo scorso, sotto la guida di Enrico Fermi, ebbero una straordinaria influenza sulla Fisica italiana e mondiale.

SEMINARS&EVENTS >

Regularity of free boundaries in anisotropic capillarity problems and the validity of the Young's law

Guido De Philippis

April 16, 3 pm - Main Lecture Hall

Local volume-constrained minimizers in anisotropic capillarity problems develop free boundaries on the walls of their containers. We prove the regularity of the free boundary outside a small set, showing in...

Measurement-based Performance Problem Detection and Diagnosis

Dr. André van Hoorn, University of Stuttgart, Germany

Tuesday April 21, 2015 11 a.m. - Main Lecture Hall

AbstractApplication performance monitoring (APM) is getting more and more common in practice. The APM data obtained from the monitored application systems – ranging from aggregated response time and resource utilization...

Control of Partial Differential Equations @GSSI

many speakers

April 22-24 - GSSI

This meeting is aimed to offer an updated view of the current research of interest to the GDRE CONEDP to the large and active community operating at GSSI and to...
