

Nanoscience and Nanotechnology

Monday, 26 September 2016 - Thursday, 29 September 2016

INFN-Laboratori Nazionali di Frascati

Book of Abstracts

Contents

Safety Assessment of Engineered Nanomaterials: Implications for Nanomedicine	1
Nanotechnologies and Raman SERS applied in Medicine: from Therapeutic Drug Monitoring to screening in oncology	1
Safety assessment of nanotechnologies in the food sector: problems and perspectives . .	1
pH and thermo-sensitive self-assembling properties in aqueous solution of the lipopeptide lauril-Gly-Gly-D-Ser-D-Lys-NH ₂	1
A New Anticancer Agent for Hedgehog-dependent Tumors: from Drug Discovery to Drug Delivery	1
Use of ferritin-based nanoparticles for the treatment of human diseases	1
Hyaluronic acid as carrier for anti-inflammatory and anticancer bioactives: the role of CD44 in cancer treatment	1
Optical Flow tracing of micro and nano contrast agents: new method for tumor's microenvironment evaluation	2
Targeting and drug delivery by nanogels with temperature tunable surface: A case study	2
Designing Magnetic Nanomaterials for Biomedical Applications	2
The biogenesis and function of matrix (nano)vesicles during endochondral ossification .	2
Advanced biomaterials and technologies for tissue repair/regeneration	2
Raman Spectroscopy as a tool for investigation of carbon materials: a careful approach .	2
Immunotherapy on chip: "under the microscope" drug-induced modulation of the immune response	2
Electrospinning of nanofibers for tissue engineering	3
Recent Advances in Graphene Nanophotonics	3
Sensing Properties of Electrically Conductive Polymer blends and composites containing CNT	3
Prospective Technologies for Organ Repair	3
Microgravity and cell shape. Non-equilibrium related emergence of different phenotypes	3

The effects induced by the microgravity: in vitro cell models to study the variation of extracellular mechanical forces	3
Two Dimensional Nitrides: an ab-initio study	3
Doping graphene with nitrogen, theory and experiment	3
Carbon Gibson Cells for electromagnetic applications	4
Recent progress in osteoarthritis nanomedicine	4
Fabrication and characterization of matrix vesicles biomimetic systems and their interaction with collagen fibers during biomineralization	4
Proteoliposomes in nanobiotechnology: proteins carrier systems to study the biomineralization process	4
Nanostructured Membrane Bioreactor for the creation of a human Liver Tissue	4
Electrofluidinamics: Innovative platforms for Tissue Engineering and Molecular Therapies	4
Removing interferences with the MS-MS technology in triple quadrupole ICP-MS to improve the analytical detection of inorganic nanomaterials	4
Electron microscopy of nanostructured materials for photovoltaic and photocatalytic applications	5
Efficient Surface Enhanced Raman Substrates for trace analysis and bio-sensing	5
Structural Characterization of Carbon-Based Nanomaterials	5
Tunable electron devices based on 2d materials	5
Opening bandgap in graphene by nanopatterning	5
TBA	5
Nanoantimicrobials. Progress and Prospects	5
Nano-biomaterials for cancer treatment: a light triggered implemented approach	6
In situ observation of heat-induced degradation of perovskite solar cells	6
Carbon nano-materials for electronics packaging applications	6
Microwave Microscopy for Nano-Scale Characterization of Semiconductors and Dielectric Materials	6
Electromagnetic characterization of vertically-aligned MWCNT bundles: Applications to subwavelength antennas in microwave domain	6
Atomic force microscopy cantilevers beyond imaging	6
Performance Analysis and robust design of a graphene-based device for shielding application	7

High performance computing to design new materials for energy applications: the a-Si:H/c-Si interface for PV technology	7
Advanced polymer nanocomposites through a tailored control of graphene spatial distribution	7
Nanostructured Polymeric Ablative Materials	7
Multiscale Molecular Simulations of Polymers and Polymer Composites	7
Structure and electronic properties of Zn-tetra-phenyl-porphyrins single- and multi-layers films grown on Fe (001)-p(1x1)O	7
Disclosing the early stages of electrochemical anions intercalation in graphite by a combined AFM/STM investigation	7
Full-Wave modeling of the ballistic Ratchet effect in graphene-based nanodevices	8
Novel Microwave Applications of Few-layer Graphene Flakes	8
Surface-enhanced spectroscopy of sulfonated Zn-phthalocyanine by gold nanoparticles	8
PHYSICAL AND BIO- NANOSENSORS FOR MEDICAL APPLICATIONS AND ECOLOGICAL MONITORING	8
Electrodecoration methods for the controlled incorporation of transition metal nanophases in organic and inorganic nano-substrates. Synthesis, characterization and applications to environmental monitoring and green processes	8
Electronic structure of hydrogenated diamond: Microscopical insight into surface conductivity	8
GRAPHENE-BASED MATERIALS: Look underneath with Scanning Probe Microscopy	8
Graphene based Thermoset composites: an overview and a study on the Role of graphene nano-platelets morphology	9
Opening bandgap in graphene by nanopatterning	9
Carbon-based devices with negative coefficient of the resistance	9
Hot Disk and Hot Strip Technique: Tests of Anisotropic Thermal Transport Properties and Future Outlook	9
Pyrofluidic: a novel platform for manipulating multiphase materials from micro to nanoscale	9
High performance computing to design new materials for energy applications : the a - Si:H/c - Si interface for PV technology	9
Studying the reinforced composites by high-frequency ultrasound	10
tba	10
Round table	10
Social Dinner at Gallo Regillo Restaurant	10

Plasmon properties and hybridization effects in Silicene	10
Fundamental properties of Transition Metal dichalcogenides : a new class of 2D materials for opto-electronic applications	10
Plasmon Modes of Graphene Nanoribbons with Periodic Planar Arrangements	10
Terahertz Plasmonics and non Linear Optics based on Dirac electrons in Topological Insulators	11
Local Phase Density Approximation (LPDA) to the Bogolubov-de Gennes equations throughout the BCS-BEC crossover	11
Monte Carlo simulations of fast electrons in Diamond and Graphite crystals	11
Designing graphene based nanofoams with nonlinear auxetic and anisotropic mechanical properties under tension or compression	11
High-resolution ultrasonic technique for bulk microstructure investigation. Principles and areas of application	11

Plenary Session / 0

Safety Assessment of Engineered Nanomaterials: Implications for Nanomedicine

Plenary Session / 1

Nanotechnologies and Raman SERS applied in Medicine: from Therapeutic Drug Monitoring to screening in oncology

Plenary Session / 2

Safety assessment of nanotechnologies in the food sector: problems and perspectives

NANOMEDICINE AND NANOTHERAPEUTICS / 3

pH and thermo-sensitive self-assembling properties in aqueous solution of the lipopeptide lauril-Gly-Gly-D-Ser-D-Lys-NH₂

Corresponding Author: federica.novelli@uniroma1.it

NANOMEDICINE AND NANOTHERAPEUTICS / 4

A New Anticancer Agent for Hedgehog-dependent Tumors: from Drug Discovery to Drug Delivery

Corresponding Authors: cinzia.ingallina@uniroma1.it, francesca.ghirga@iit.it

NANOMEDICINE AND NANOTHERAPEUTICS / 5

Use of ferritin-based nanoparticles for the treatment of human diseases

6

Hyaluronic acid as carrier for anti-inflammatory and anticancer bioactives: the role of CD44 in cancer treatment

7

Optical Flow tracing of micro and nano contrast agents: new method for tumor's microenvironment evaluation

Corresponding Author: p.giustetto@pulse-waves.com

NANOMEDICINE AND NANOTHERAPEUTICS / 8

Targeting and drug delivery by nanogels with temperature tunable surface: A case study

NANOMEDICINE AND NANOTHERAPEUTICS / 9

Designing Magnetic Nanomaterials for Biomedical Applications

Corresponding Author: dpeddis@hotmail.com

Plenary Session / 10

The biogenesis and function of matrix (nano)vesicles during endochondral ossification

Plenary Session / 11

Advanced biomaterials and technologies for tissue repair/regeneration

Plenary Session / 12

Raman Spectroscopy as a tool for investigation of carbon materials: a careful approach

Plenary Session / 13

Immunotherapy on chip: "under the microscope" drug-induced modulation of the immune response

Plenary Session / 14

Electrospinning of nanofibers for tissue engineering

Plenary Session / 15

Recent Advances in Graphene Nanophotonics

Plenary Session / 16

Sensing Properties of Electrically Conductive Polymer blends and composites containing CNT

Tissue Engineering and Microgravity / 17

Prospective Technologies for Organ Repair

Tissue Engineering and Microgravity / 18

Microgravity and cell shape. Non-equilibrium related emergence of different phenotypes

Corresponding Author: mariano.bizzarri@uniroma1.it

Tissue Engineering and Microgravity / 19

The effects induced by the microgravity: in vitro cell models to study the variation of extracellular mechanical forces

Electronic Devices and Fundamental properties / 20

Two Dimensional Nitrides: an ab-initio study

Electronic Devices and Fundamental properties / 21

Doping graphene with nitrogen, theory and experiment

Corresponding Author: philippe.lambin@unamur.be

Electronic Devices and Fundamental properties / 22

Carbon Gibbson Cells for electromagnetic applications

Corresponding Author: polina.kuzhir@gmail.com

Tissue Engineering and Microgravity / 23

Recent progress in osteoarthritis nanomedicine

Tissue Engineering and Microgravity / 24

Fabrication and characterization of matrix vesicles biomimetic systems and their interaction with collagen fibers during biomineralization

Tissue Engineering and Microgravity / 25

Proteoliposomes in nanobiotechnology: proteins carrier systems to study the biomineralization process

Nanomomedical application / 26

Nanostructured Membrane Bioreactor for the creation of a human Liver Tissue

Corresponding Author: s.salerno@itm.cnr.it

Nanomomedical application / 27

Electrofluidinamics: Innovative platforms for Tissue Engineering and Molecular Therapies

Characterization on nanomaterials / 28

Removing interferences with the MS-MS technology in triple quadrupole ICP-MS to improve the analytical detection of inorganic nanomaterials

Plenary Session / 29

Electron microscopy of nanostructured materials for photovoltaic and photocatalytic applications

Characterization on nanomaterials / 30

Efficient Surface Enhanced Raman Substrates for trace analysis and bio-sensing

Characterization on nanomaterials / 31

Structural Characterization of Carbon-Based Nanomaterials

Electronic Devices and Fundamental properties / 32

Tunable electron devices based on 2d materials

33

Opening bandgap in graphene by nanopatterning

Corresponding Author: adrian.dinescu@imt.ro

34

TBA

Plenary Session / 35

Nanoantimicrobials. Progress and Prospects

Nanomedical application / 36

Nano-biomaterials for cancer treatment: a light triggered implemented approach

Corresponding Author: greta.varchi@isof.cnr.it

Characterization on nanomaterials / 37

In situ observation of heat-induced degradation of perovskite solar cells

Corresponding Author: gd322@cam.ac.uk

Electronic devices and ICT / 38

Carbon nano-materials for electronics packaging applications

Electronic Devices and Fundamental properties / 39

Microwave Microscopy for Nano-Scale Characterization of Semiconductors and Dielectric Materials

40

Electromagnetic characterization of vertically-aligned MWCNT bundles: Applications to subwavelength antennas in microwave domain

Corresponding Author: charlotte.tripon-canseliet@espci.fr

NANOMEDICINE AND NANOTHERAPEUTICS / 42

Atomic force microscopy cantilevers beyond imaging

Corresponding Author: longo@ism.cnr.it

Electronic Devices and Fundamental properties / 43

Performance Analysis and robust design of a graphene-based device for shielding application

Electronic devices and ICT / 44

High performance computing to design new materials for energy applications: the a-Si:H/c-Si interface for PV technology

Nanocomposite Materials / 45

Advanced polymer nanocomposites through a tailored control of graphene spatial distribution

Nanocomposite Materials / 46

Nanostructured Polymeric Ablative Materials

Corresponding Author: maunat@hotmail.com

Nanocomposite Materials / 47

Multiscale Molecular Simulations of Polymers and Polymer Composites

Electronic devices and ICT / 48

Structure and electronic properties of Zn-tetra-phenyl-porphyrins single- and multi-layers films grown on Fe (001)-p(1x1)O

Corresponding Author: gianlorenzo.bussetti@polimi.it

Characterization on nanomaterials / 49

Disclosing the early stages of electrochemical anions intercalation in graphite by a combined AFM/STM investigation

Corresponding Author: rossella.yivlialin@polimi.it

Electronic devices and ICT / 50

Full-Wave modeling of the ballistic Ratchet effect in graphene-based nanodevices

Electronic devices and ICT / 51

Novel Microwave Applications of Few-layer Graphene Flakes

Characterization on nanomaterials / 52

Surface-enhanced spectroscopy of sulfonated Zn-phthalocyanine by gold nanoparticles

Corresponding Author: fesenko.olen@gmail.com

Electronic devices and ICT / 54

PHYSICAL AND BIO- NANOSENSORS FOR MEDICAL APPLICATIONS AND ECOLOGICAL MONITORING

Corresponding Author: yu_shunin@inbox.lv

Nanomaterial application / 55

Electrodecoration methods for the controlled incorporation of transition metal nanophases in organic and inorganic nano-substrates. Synthesis, characterization and applications to environmental monitoring and green processes

Corresponding Author: nicoletta.ditaranto@uniba.it

Fundamental Properties / 56

Electronic structure of hydrogenated diamond: Microscopical insight into surface conductivity

Corresponding Author: stefano.iacobucci@cnr.it

Nanocomposite Materials / 57

GRAPHENE-BASED MATERIALS: Look underneath with Scanning Probe Microscopy

Corresponding Author: andrea.liscio@isof.cnr.it

Characterization on nanomaterials / 58

Graphene based Thermoset composites: an overview and a study on the Role of graphene nano-platelets morphology

Corresponding Author: nicola.mirota@isof.cnr.it

Electronic Devices and Fundamental properties / 60

Opening bandgap in graphene by nanopatterning

Author: Adrian Dinescu¹

¹ *National Institute for Research and Development in Microtechnology (IMT)*

Electronic Devices and Fundamental properties / 61

Carbon-based devices with negative coefficient of the resistance

Corresponding Author: antonio.maffucci@lnf.infn.it

Nanocomposite Materials / 62

Hot Disk and Hot Strip Technique: Tests of Anisotropic Thermal Transport Properties and Future Outlook

Plenary Session / 63

Pyrofluidic: a novel platform for manipulating multiphase materials from micro to nanoscale

64

High performance computing to design new materials for energy applications : the a - Si:H/c - Si interface for PV technology

Corresponding Author: massimo.celino@enea.it

Nanocomposite Materials / 65

Studying the reinforced composites by high-frequency ultrasound

66

tba

Plenary Session / 67

Round table

Social Dinner / 68

Social Dinner at Gallo Regillo Restaurant

Electronic Devices and Fundamental properties / 69

Plasmon properties and hybridization effects in Silicene

Corresponding Author: cristianisaac.vacacelagomez@fis.unical.it

Electronic Devices and Fundamental properties / 70

Fundamental properties of Transition Metal dichalcogenides : a new class of 2D materials for opto-electronic applications

Corresponding Author: maurizia.palummo@roma2.infn.it

Electronic Devices and Fundamental properties / 71

Plasmon Modes of Graphene Nanoribbons with Periodic Planar Arrangements

Corresponding Author: sindona@fis.unical.it

Electronic Devices and Fundamental properties / 72

Terahertz Plasmonics and non Linear Optics based on Dirac electrons in Topological Insulators

Corresponding Author: stefano.lupi@roma1.infn.it

Fundamental Properties / 73

Local Phase Density Approximation (LPDA) to the Bogolubov-de Gennes equations throughout the BCS-BEC crossover

Fundamental Properties / 74

Monte Carlo simulations of fast electrons in Diamond and Graphite crystals

Corresponding Author: mazzolini@ectstar.eu

Electronic Devices and Fundamental properties / 75

Designing graphene based nanofoams with nonlinear auxetic and anisotropic mechanical properties under tension or compression

Plenary Session / 76

High-resolution ultrasonic technique for bulk microstructure investigation. Principles and areas of application
