

Testing Inflation with the CMB: Past and Future

Tuesday, 20 September 2016 10:50 (45 minutes)

Precise observations of the cosmic microwave background (CMB) have substantially narrowed the field of viable models for the early universe and for generating the seeds of large-scale structure. I will review the constraints imposed on models of inflation by current CMB observations and survey the future constraints to be anticipated, in particular through the search for B-mode polarization of the CMB.

Presenter: Dr BUCHER, Martin (APC Paris 7, CNRS and PLANCK)
