## Charm Physics with LHCb

*Friday, 21 April 2017 11:00 (15 minutes)*

An overview of the latest LHCb's measurements in the charm physics sector is presented. This includes precise measurements of direct and indirect CP-violating observables and precise determination of mixing parameters in two-body  $D^0$  decays, CP violation in multi-body charm decays and searches of rare decays. Perspectives, in view of future LHCb Runs, will be also presented.
