

FastSim Generic Production

- What fastsim features are **required**?
 - PID, tagging, pat. rec. confusion, bkg. merging, ...
- What detector configurations are required
 - DGWG options?
- What kind of output do we need?
 - BtuTupleDump?
 - Analysis chain reconstruction?
- How many events?
- Where and how to run the jobs?

Technical issues

- Random number generation
 - Simulation seed not coordinated with generator
 - Max # events/run?
- Output size, storage, and access
- Job management and data bookkeeping
