# Offline Development

David Brown
SuperB Computing Meeting
25 March 2009

# FastSim

- Lots of progress since Orsay

  - On track to meet goals (Warwick)

  - Will take time to assimilate changes

- Strategy for supporting DGWG

- Need better user support

  - release tools, software distribution, computing infrastructure, user packages, ...

  - Listed in WBS, needs are ~immediate

# BaBar Software in SuperB

- Requested release of 'core' software still pending

  - Needs better followup from my side

- DGWG, Physics reach studies need access to sophisticated BaBar tools

  - tagging, BReco, B→τν, ...

  - This has been a sensitive issue

  - BaBar+Belle collaboration may make this easier

- We need a schedule for a first offline release

  - Warwick appears to be too early
