Exploring New Physics

R.L. Gennaro Corcella

- G. Corcella 100%
- V. Del Duca (in congedo, ETH Zuric)
- G. Pancheri (senior associate)

Iniziativa Specifica Exploring New Physics (ENP) – Nodi: LNF, RM1, RM2, NA

Responsabile Nazionale: G. D'Ambrosio (NA); Responsabile LNF: G. Corcella

Afferenti LNF: G. Corcella (FTE=1), V. Del Duca (FTE=0, ETH Zurigo),
G. Panzeri (FTE=0, senior associate)

Assegno di ricerca cofinanziato LNF/RM3 da Ottobre 2017 (selezione in corso)

Attività di ricerca su vari temi di fenomenologia dei collider:

- Test di precisione del Modello Standard e ricerche di nuova fisica a LHC, in particolare supersimmetria, produzione di bosoni pesanti Z' , Materia Oscura, modelli 331
- Calcoli ad ordine superiore per interazioni forti ed elettrodeboli: ampiezze di scattering a due loop, risommazione di gluoni soffici, frammentazione di quark pesanti, implementazione di generatori Monte Carlo per la fisica dei collider (fenomenologia del top e ioni pesanti)

Organizzazione joint workshops LNF/Rome (G.C.), Linear and Future Colliders 2017 (G.C. and G.P.), School of Analytic Computing (V.D.D.), Photon 2017 (G.P.), LNF Winter/Spring Institutes (G.C.)

Gennaro Corcella:

1. Fisica del top: determinazione dell'errore sistematico sulla massa del top dovuto alla frammentazione del quark bottom ($t \rightarrow bW$) e ad effetti di riconnessione di colore

Incertezza nell'interpretazione della misura della massa del top (generatori Monte Carlo) e definizioni teoriche quali la 'pole mass'

Collaboratori: M.Mangano (CERN), R.Franceschini (RM3)

2. Ricerche di Z' in canali non standard: decadimenti supersimmetrici o modelli leptofobici abbassano i limiti di esclusione sulla massa della Z' e richiedono nuove analisi sperimentali in stati finali con leptoni e MET. Decadimenti in LSP (neutralini) fondamentali per le ricerche di materia oscura a LHC

Collaboratori: B.Fuks (Paris), J.Araz (Concordia), M. Frank (Concordia)

3. Modelli 331 a LHC: nuova simmetria $SU(3)_C \times SU(3)_L \times U(1)_X$ predice bosoni Y di carica ± 2 e massa $\mathcal{O}(1 \text{ TeV})$, bosone pesante Z' , quark esotici di carica $-4/3$ e $5/3$

Processi $pp \rightarrow Y^{++}Y^{--}jj \rightarrow (\ell^+\ell^+)(\ell^-\ell^-)jj$ con due coppie leptoniche dello stesso segno e due jet 'forward' facilmente separabili dai fondi mediati da ZZ

Collaboratori: C.Corianò (Lecce), A.Costantini (Lecce), P.Frampton (Oxford)

Relazione sull'attività di ricerca

Vittorio Del Duca

Linee di ricerca

- sviluppare un nuovo metodo di calcolo di ampiezze di scattering a due loop, e applicarlo alle correzioni di massa del top alla produzione di Higgs + 1 jet [1]
- potenziare il calcolo di ampiezze di scattering in teorie di gauge, mediante l'uso di concetti avanzati di algebra moderna [2, 3]

LNF activities in 2017

A multidisciplinary and convergence research proposal in statistical physics and many body Green's function theory. Central to its overall theme is an investigation of the striking out-of-equilibrium properties and excited-state features of many fermions and bosons in low-dimensions. These include a wide variety of systems as diverse as:

- (i) mutually interacting electrons in a honeycomb lattice potential,
- (ii) ensembles of ultra-cold atomic gases,
- (iii) magnetic and spin systems,
- (iv) quantum wires and dots.

New methods and computational strategies to unravel the fundamental excitations and corresponding relaxation dynamics of novel low dimensional materials, which are also of strategic interest for nanoelectronics and quantum computing technologies.

transport mechanisms and collective phenomena in condensed matter investigated by ab-initio and Montecarlo methods, as well as semiclassical multiscale approaches.

Quantum Field Theory effects induced by geometry and topology, i.e. defects in mesoscopic systems (but also cosmic strings), with boundary conditions. The applications are mesoscopic physics, e.g. nanotubes and graphene properties (but also cosmology, black holes physics).

Massive simulations of spectral features, dielectric screening, conductivity response and electro-mechanical properties of graphene-related and beyond-graphene materials, including interfaces and contacts with supporting substrates. Verification and validation of models by comparison of predictions with measurements taken from surface-science spectroscopies and microscopies, leading to realization of simple devices. Irreversible properties of ultracold Fermi and Bose gases, following a change of their trapping potentials. Quantum thermodynamics of such interacting many-body systems will be studied.

NEMESYS-Non Equilibrium dynamics Models and Excited state properties of low-dimensional SYStems- *S. Bellucci (LNF spokesperson), A. Sindona (Resp. Naz.), continued*

Richieste ai servizi LNF 2018

Al momento nessuna.

Chiederei la disponibilita' a valutare possibili (piccole) richieste piu' avanti.

Ringrazio, anche da parte del Direttore CMTP, i Laboratori per l'ospitalita', e la Segreteria della DR , in particolare Lia Sabatini, per l'ottima collaborazione durante il Programma di Ricerca Intensivo Mathematics and Physics at the CrossRoads che si e' svolto nel 2016.

TAsP

Theoretical Astroparticle Physics

R.L. Enrico Nardi

- E. Nardi 100%
- F. Bjorkeroth 100% (INFN Postdoc, Oct. 2017)
- A. Ghoshal 100% (Ph.D. Student, RM3)
- C.D.Ruiz Carvajal 50% (Ph. D. Student, U. Antioquia)

TAsP-LNF: Argomenti di Ricerca

Well established lines of research:

- Cosmological matter/antimatter asymmetry (Leptogenesis)
- Dark Matter (models & properties – Asymmetric DM)
- Neutrinos (Majorana, Dirac, models for masses and mixings)
- Lepton Flavor, Lepton Flavor Violation in theories BSM

New research paths:

- Axions (astrophysical/cosmological implications)
- Dark Photons (how to exploit at best PADME)

Approaching Axion physics: focus on two “hot topics”

1. In which region of parameter space do preferred axion models live ?
2. What is the origin of the (global & anomalous) Peccei-Quinn Symmetry ?

Answer to question 1:

PRL 118, 031801 (2017) PHYSICAL REVIEW LETTERS week ending 20 JANUARY 2017

Redefining the Axion Window

Luca Di Luzio,^{1,*} Federico Mescia,^{2,†} and Enrico Nardi^{3,‡}
