

# Status of the SPES Cyclotron, commissioning and capabilities report

## CYCLOTRON MAIN SPECIFICATIONS

- Proton energy variable in the range **35-70 MeV**
- Total current outside the cyclotron, two extraction lines  **$\geq 700 \mu\text{A}$  ( $\sim 4.2 \cdot 10^{15}$  p/s)**
- Operation vacuum (beam on)  **$\leq 2 \cdot 10^{-5}$  Pa**
- Momentum spread  $\Delta p/p$  of the extracted beam  **$< \pm 0.2\%$**
- Beam spot size on the target  **$\Phi = 40$  mm (area  $1260$  mm<sup>2</sup>)**
- Beam time structure CW
- Beam intensity stability on target for proton beam
  - o Fast (time scale  $\mu\text{s}$ )  $\pm 10\%$
  - o Medium (time scale s)  $\pm 1\%$
  - o Slow (time scale hour)  $\pm 1\%$
- Emergency switch-off time  **$< 50 \mu\text{sec}$**
- Machine reliability  **$> 95\%$  of planned operation time**
- Planned operation time  **$\geq 7500$  h/Year**
- Beam current losses:
  - Injection line  **$\leq 1\%$**
  - Central Region  **$\leq 90\%$**
  - Acceleration  **$\leq 5\%$**
  - Extraction  **$\leq 1\%$**
  - Transport line  **$\leq 1\%$**

**Beam Dumper shielded  
by polyethylene**

Table 1. Proton beam requirements at different target stations in SPES building.

Area	A4	A6	A9	RI#1	RI#2	RI#3	L3c
Purpose	ISOL target	ISOL target	Neutrons generator targets	Radio isotopes (RI) production	RI production	RI R&D	RI R&D
Energy	40 MeV	40 MeV	30–70 MeV	35–70 MeV	35–70 MeV	35–70 MeV	35–70 MeV
Current	200 $\mu\text{A}$	200 $\mu\text{A}$	50 $\mu\text{A}$	500 $\mu\text{A}$	500 $\mu\text{A}$	300 $\mu\text{A}$	< 1 $\mu\text{A}$

Table 1 shows the beam requirements for each experimental hall expected to be operating in SPES building.

# SAT endurance test

## Raw data (trips removed)

The average value of current is:  $201.18 \mu\text{A}$   
with standard deviation of:  $0.97 \mu\text{A}$

Trips removed

## Raw data, trips not removed

**Total acquisition time: 5.0 days.**

The total down time is: 9.1 % of total time.

**The total up time is: 4.55 days of 5.0 days.**

**The total up time is: 90.9 % of total time.**

Of the total 108 trips, **72 are RF sparks.**

December 2017

## 500 $\mu\text{A}$ : two runs in two different days Each run around 15 minutes

14<sup>th</sup> Dec. 2017

The average value of current is: 499.7  $\mu\text{A}$   
with standard deviation of: 2.6  $\mu\text{A}$

15<sup>th</sup> Dec. 2017

The average value of current is: 500.8  $\mu\text{A}$   
with standard deviation of: 2.7  $\mu\text{A}$
