

WIN2019 The 27th International Workshop on Weak Interactions and Neutrinos.

Contribution ID: 36

Type: **Poster**

Status of the MicroBooNE Low-energy Excess Search

The primary goal of MicroBooNE is to address the origin of the excess of low energy electromagnetic-like events observed by MiniBooNE. This talk will present MicroBooNE's progress towards a low-energy excess result, including the status of targeted searches for both single-photon-like and electron-like events.

Collaboration name

MicroBooNE

Primary author: MICROBOONE COLLABORATION

Presenter: MICROBOONE COLLABORATION

Session Classification: Poster session

Track Classification: Neutrino Physics
