

- Apr 2016: Release of ESA Call for M5 mission
- Jun 2016: Letter of Intent submitted
- **Oct 2016:** **Proposal submitted**
- Feb 2017: Endorsement from national agencies
- **Jun 2017:** **Selection on technical and programmatic feasibility criteria**  
(13 missions downselected)
- Oct 20<sup>th</sup>: 11 written questions from ESA's M5 Science Assessment Review Panel (SARP-M5)
- Oct 30<sup>th</sup>: Answer to the questions from SARP-M5
- **Nov 3<sup>rd</sup>:** [Publication of the 1<sup>st</sup> draft of the White Book: Science with e-ASTROGAM \(\*arXiv:1711.01265\*\)](#)
- Nov 7<sup>th</sup>: Interview at ESTEC (ADA, LH, VT) by SARP-M5 and SSC-M5
- **Dec 22<sup>th</sup>:** [Submission of the final draft of the White Book](#)
- **Dec 2017:** **Selection of maximum 3 missions for study**
- May 2018(?): Phase 0 completed
- Jun 2018(?): Phase A kick-off
- May 2020(?): Mission selection (launch in 2029-2030)

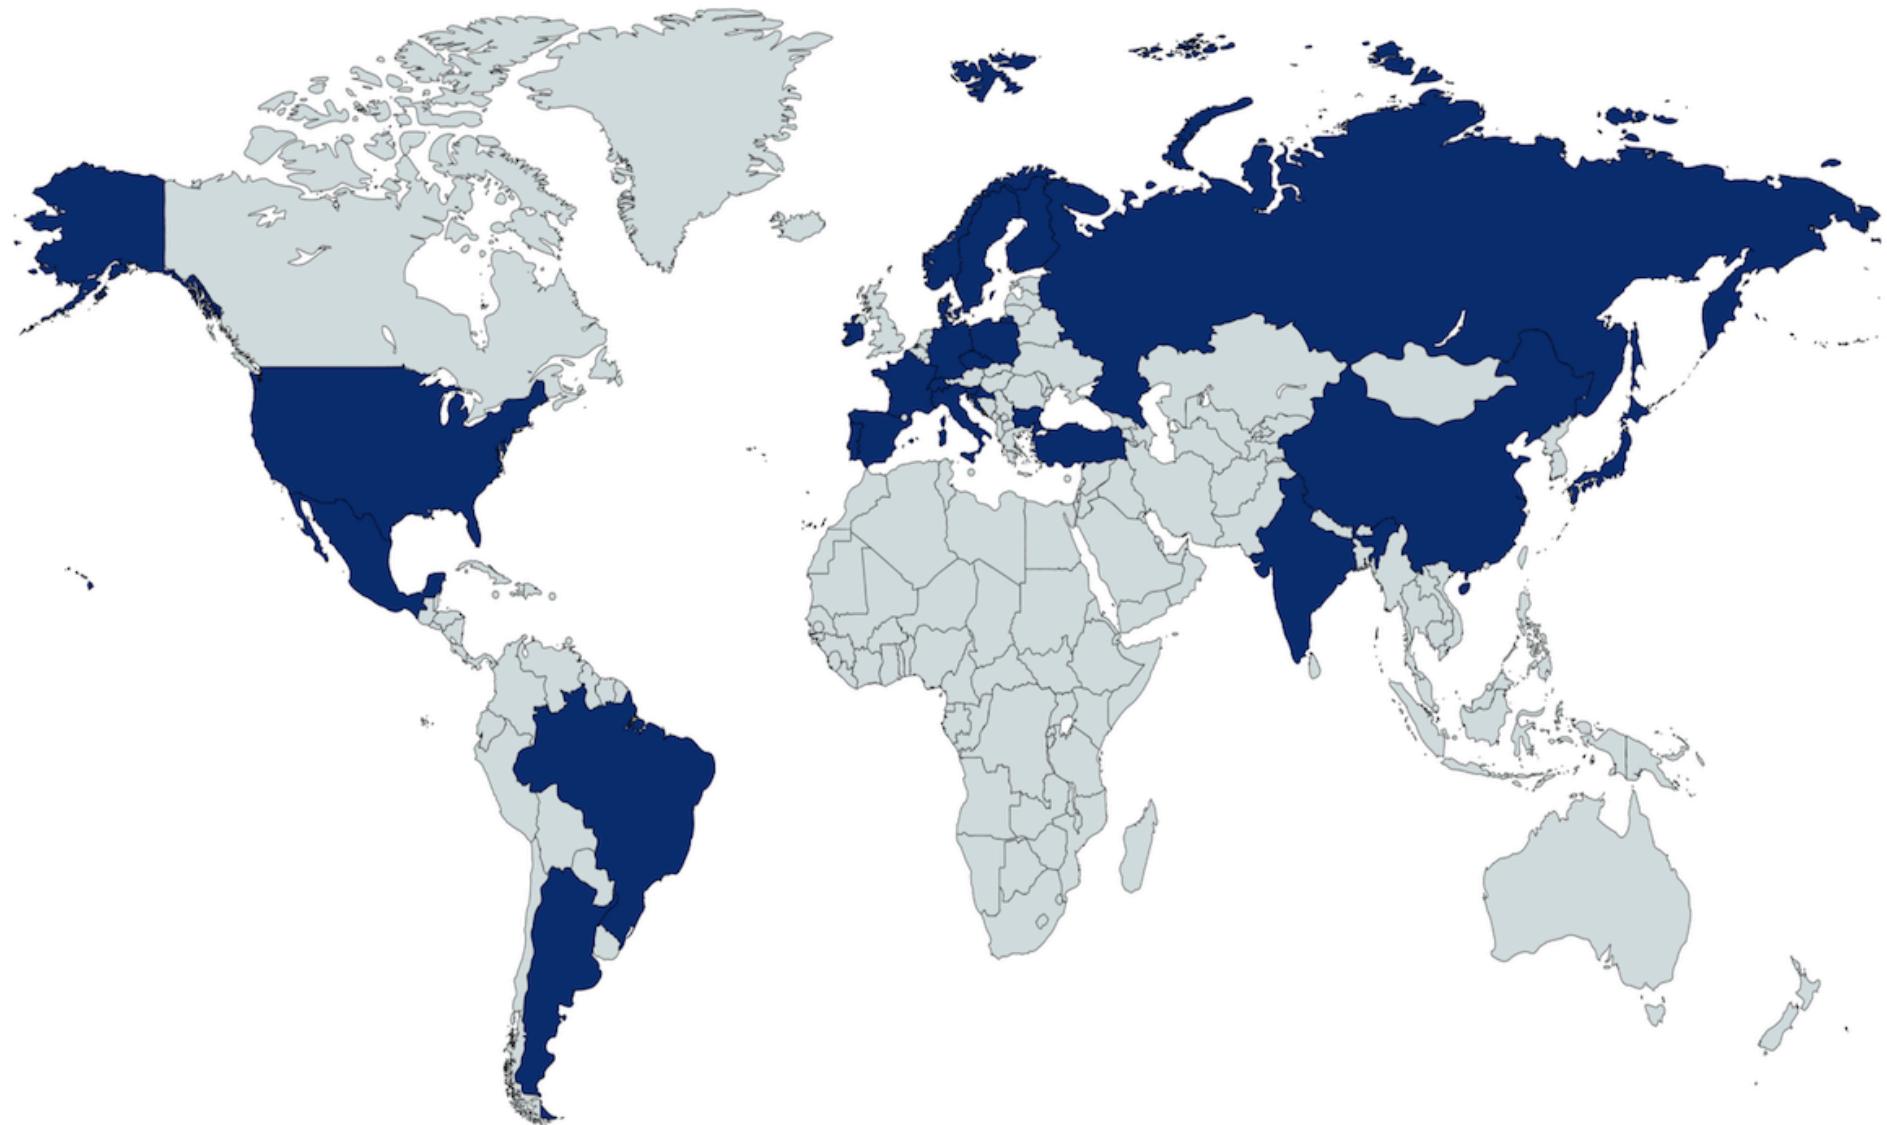

## Science with e-ASTROGAM

## A space mission for MeV-GeV gamma-ray astrophysics

arXiv:1711.01265v1 [astro-ph.HE] 3 Nov 2017

**Q1.** ... Provide detailed comparisons of e-ASTROGAM's performance against other missions for **three or four science use cases**. ...

=> (1) High-redshift MeV blazars, (2) Most energetic pulsars, (3) Cosmic rays in the Galactic center, (4) First source of multi-messenger astronomy: GW170817

**Q2.** ... Provide more details on the **background**. How would a slight loss in efficiency of the anti-coincidence detector at the beginning of the mission affect the science return? ...

=> **Further discussed during the interview at ESTEC**

**Q3.** ... Provide estimates of the initial **calibration** accuracy and the likely end-of-life calibration accuracy, and how **instrument ageing** will affect science cases over the mission. ...

**Q4.** ... **Complex detectors**, calorimeter in particular. Since calibration and assembly may be tricky, please provide some commentary about the impact on the mission of the **loss of (say) 50% of the calorimeter**. ...

=> Instrument development

**Q5.** ... **Management** processes to ensure timely instrument development (35+ institutes in 9+ nations). ...

**Q6.** ... Provide an assessment of the number of targets of different kinds for which good **polarization** data are expected. ...

=> More than 360 sources including ~ 300 GRBs

=> **Further discussed during the interview at ESTEC**

**Q7.** ... How will **neutrino and gravitational wave triggers** be dealt with by e-ASTROGAM? Are specific programme interrupts planned or are  $\gamma$ -ray counterparts only to be sought via serendipitous detections?...

**Q8.** ... Please provide more details on how e-ASTROGAM detected **GRB (and other transient) follow-up** would be done. ...

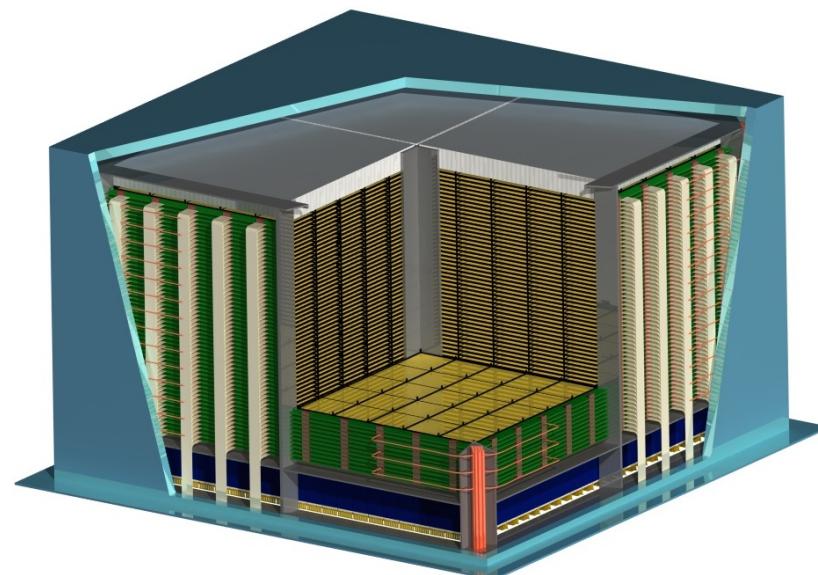

=> **Further discussed during the interview at ESTEC**

**Q9.** ... What plans have the e-ASTROGAM team made to **coordinate their observations with other observatories** likely to be operating after 2029?...

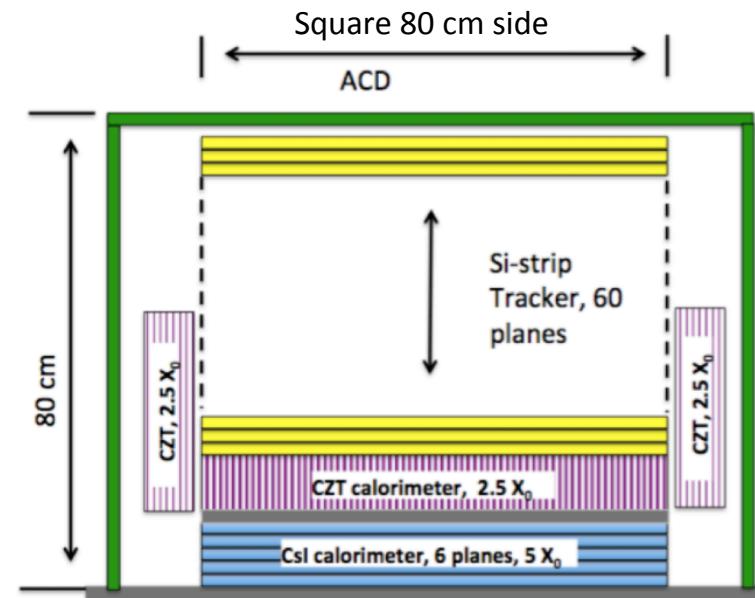

**Q10** ... What are the team's plans **on how data will be served to the community**,  
... Guest Observers ... providing access to fully-calibrated data? ...

**Q11** ... Provide some commentary on how the e-ASTROGAM team intend to **reach the widest possible astrophysics community**. ...

- Discussions with ESA's Science Assessment Review Panel were very positive<sup>6</sup>
- Probability to go to phase A of about 50% – We should be ready!
- Tasks for **AHEAD W9 SWG** during phase A:
  - Specify the **instrument design**: DSSD strip pitch, Calorimeter (CZT, CsI...), Anticoincidence Detector segmentation etc.
  - Improve the **background model**, e.g. influence of SAA (see Paolo's talk)
  - Add **science simulations** (synthetic maps and spectra)

e-ASTROGAM (ESA M5)

AMEGO (NASA Probe)
