Quarkonia in nuclear collisions

Monday, 3 September 2018 14:30 (25 minutes)

Quarkonium has been regarded as one of the golden probes to identify the phase transition from confined hadronic matter to

the deconfined quark-gluon plasma (QGP) in heavy-ion collisions. Recent theoretical developments in the study of the J/ψ

and Υ families at the energies of Large Hadron Collider (LHC) are reviewed. In particular, the possible implications related to

the production and propagation of quarkonia in proton-proton, proton-nucleus and nucleus-nucleus collisions are discussed. A special

emphasis is put on the excited states such as the $\psi^{\prime},$ Y(2S) and Y(3S).

Presenter: Dr FERREIRO, Elena (Universidad de Santiago de Compostela)

Session Classification: Heavy Ion collisions and QCD phases
