## Baryon timelike Form Factors at BESIII

*Tuesday, 4 September 2018 18:10 (20 minutes)*

A status report on Baryon Timelike Form Factors is shown and the last results by BESIII are reported. Unexpected features are enlightened, like: oscillations in the  $e^+ e^- \rightarrow p\bar{p}$  cross section energy behaviour, a jump in the  $e^+ e^- \rightarrow \Lambda_c \Lambda_{\bar{c}}$  cross section at threshold, like in the case of  $e^+ e^- \rightarrow p\bar{p}$ , as well as a jump in the  $e^+ e^- \rightarrow \Lambda \Lambda_{\bar{\Lambda}}$  cross section close to threshold. The first measurement of the  $e^+ e^- \rightarrow \Lambda \Lambda_{\bar{\Lambda}}$  GE/GM phase is also reported.

**Presenter:** BERTANI, Monica (LNF - Frascati (Italy))

**Session Classification:** Hadron structure, spectroscopy and dynamics
