

PANGU telescope angular resolution

Geant4 “fast” Monte Carlo (MC) simulation:

- 150 μm Si detector;
- 242 μm pitch
 \rightarrow 70 μm resolution simulated
 (very conservative:
 35 μm resolution @ 242 μm
 10 μm resolution @ 110 μm
 easily achievable)

\rightarrow results very preliminary and to be confirmed with a dedicated and reliable MC
