

Vulcano Workshop 2018 - Frontier Objects in Astrophysics and Particle Physics

Contribution ID: 9

Type: **not specified**

Overview of ASI science missions

In this talk I will go through the current operating science missions and experiments to which ASI participates and which are giving relevant contributions to the astrophysics and particle physics. Starting from PAMELA via AMS to CALET in the cosmic rays study and starting from INTEGRAL via Swift, AGILE, Fermi, NuSTAR in the high energy astrophysics branch. I will discuss also the future opportunities in these science fields.
