## **GW170817 Falsifies Dark Matter Emulators**

*Friday, 2 March 2018 11:40 (20 minutes)*

The gravitational wave (GW) signal (GW170817) from the coalescence of binary neutron stars was simultaneously seen throughout the electromagnetic (EM) spectrum from radio waves to gamma-rays. We point out that this simultaneous detection rules out a class of modified gravity theories, and provides another indirect evidence for the existence dark matter.
