Radiotherapy and Neurosurgery for the Treatment of Brain Lesions. An Uneasy but Necessary Joint Collaboration

Friday, 28 September 2018 09:00 (30 minutes)

Modern Neurosurgery is directed towards mini invasive for the reduction of post-operative complications.

A common strategy between mini invasive neurosurgery and other parasurgical modalities, between which radiotherapy is the main tool, may represent the best available option, and the strategic treatment modality in the future.

I present shortly here my view based on my personal experience with the treatment of demanding tumoral lesions of the brain.
