AGILE status and results

Wednesday, 5 September 2018 10:10 (30 minutes)

The gamma-ray satellite AGILE is dedicated to the observation of astrophysical sources of photons in the 30 MeV - 30 GeV energy range. The satellite launched in April 2007 has completed its 11th year of operations, and continues its mission with high efficiency. In this talk, we will review the main AGILE scientific results and the perspectives for the future search of counterparts to gravitational waves and neutrinos.

Presenter: VERRECCHIA, Francesco (ASI Science Data Center)

Session Classification: Multimessenger search for HE CR sources
