Characterization of intense electromagnetic fields in the radiofrequency-microwave regime generated by powerful laser-matter interaction

Friday, 5 October 2018 12:15 (20 minutes)

The measurement of intense electromagnetic fields in the radiofrequency-microwave regime in experiments of laser interaction with matter is a hot topic both in laser-plasma particle-acceleration context and in inertial-confinement-fusion one. Fields up to MV/m intensity are generated in powerful interactions, but their characterization is a very delicate and complex issue, especially when using classical conductive probes. In this work we describe the measurements of these fields by means of electro-optic methods based on Pockels effect, capable to give accurate field characterization in very harsh environments for laser intensities up to the petawatt range. We describe also the techniques used in some experiments with high-intensity and high-energy lasers to achieve suitable field measurements also by means of classical conductive probes (a).

(a) This work has been partially carried out within the framework of the EUROfusion Consortium and has received funding from the Euratom research and training programme 2014-2018 under grant agreement No 633053. The views and opinions expressed herein do not necessarily reflect those of the European Commission.

Summary

Primary author: Dr CONSOLI, Fabrizio (ENEA - Centro Ricerche Frascati)

Co-authors: Dr KLIR, D (Institute of Plasma Physics, Czech Academy of Sciences, Prague, Czechia, Faculty of Electrical Engineering, Czech Technical University in Prague, Czechia); Dr MARGARONE, Daniele (Institute of Physics, Czech Academy of Sciences, Prague, Czechia); Dr DITTER, Emma-Jane (The Blackett Laboratory, Imperial College London, Prince Consort Road, London, SW7 2AZ, United Kingdom); Dr INGENITO, Francesco (ENEA); Dr HICKS, George S (The Blackett Laboratory, Imperial College London, Prince Consort Road, London, SW7 2AZ, United Kingdom); Mr DI GIORGIO, Giorgio (ENEA); Mr CRISTOFARI, Giuseppe (ENEA); Dr CIKHARDT, J (Institute of Plasma Physics, Czech Academy of Sciences, Prague, Czechia, Faculty of Electrical Engineering, Czech Technical University in Prague, Czechia); Dr KRASA, Jozef (Institute of Physics, Czech Academy of Sciences, Prague, Czechia); Dr DUVILLARET, Lionel (Kapteos); Dr PFEIFER, M (Institute of Plasma Physics, Czech Academy of Sciences, Prague, Czechia, Institute of Physics, Czech Academy of Sciences, Prague, Czechia); Dr NOTLEY, Margareth (Central Laser Facility, STFC Rutherford Appleton Laboratory, Didcot, United Kingdom); Dr DE MARCO, Massimo (Institute of Physics, Czech Academy of Sciences, Prague, Czechia); Dr CIPRIANI, Mattia (ENEA - CR Frascati); Dr ETTLINGER, Oliver C (The Blackett Laboratory, Imperial College London, Prince Consort Road, London, SW7 2AZ, United Kingdom); Mr ANDREOLI, Pierluigi (ENEA); Dr DE ANGELIS, Riccardo De Angelis (ENEA); Prof. SMITH, Roland A. (The Blackett Laboratory, Imperial College London, Prince Consort Road, London, SW7 2AZ, United Kingdom); Dr GILTRAP, Samuel (The Blackett Laboratory, Imperial College London,

Prince Consort Road, London, SW7 2AZ, United Kingdom); Dr ROBINSON, Timothy (The Blackett Laboratory, Imperial College London, Prince Consort Road, London, SW7 2AZ, United Kingdom); Prof. NAJMUDIN, Zufikar (The Blackett Laboratory, Imperial College London, Prince Consort Road, London, SW7 2AZ, United Kingdom); Dr DUDZAK, r (Institute of Plasma Physics, Czech Academy of Sciences, Prague, Czechia, Institute of Physics, Czech Academy of Sciences, Prague, Czechia)

Presenter: Dr CONSOLI, Fabrizio (ENEA - Centro Ricerche Frascati)

Session Classification: Fast events - Inertial Confinement
