

Machine Learning for Gravitational waves. Deep learning methods to study the noise of interferometers

Thursday, 14 June 2018 10:00 (30 minutes)

Noise of non-astrophysical origin contaminates science data taken by the Advanced Laser Interferometer Gravitational-wave Observatory and Advanced Virgo gravitational-wave detectors. Characterization of instrumental and environmental noise transients has proven critical in identifying false positives in the first observing runs. Machine-Learning techniques have, in recent years, become more and more reliable and can be efficiently applied to our problems.

Presenters: CUOCO, Elena (PI); RAZZANO, Massimiliano (PI)

Session Classification: Machine Learning
