- 5 Detecting (Bound) Entanglement with MUBs within the Magic Simplex
 - A Special Simplex in $\mathcal{H}_2 \otimes \mathcal{H}_2$
 - Special Simplices in $\mathcal{H}_d \otimes \mathcal{H}_d$

Motivation

Goal: detect bound entangled states

What is bound entanglement?

Goal: detect bound entangled states

What is bound entanglement?

Peres-Horodecki

Criterion:

$$(\mathbb{I} \otimes T)\rho_{\text{sep}} \geq 0$$

- for $\mathcal{H}_{d_1} \otimes \mathcal{H}_{d_2}$ with $d_1 \times d_2 \geq 6$
necessary but not sufficient!

What are MUBs?

J.Schwinger - Complementarity of Unitary Operators

What are MUBs?

J.Schwinger - Complementarity of Unitary Operators¹

Two unitary operators A and B are complementary if

¹J. Schwinger, "UNITARY OPERATOR BASES", , *Proceedings of the National Academy of Sciences* **46**, 570–579 (1960).

What are MUBs?

J.Schwinger - Complementarity of Unitary Operators¹

Two unitary operators A and B are complementary if

- both generators of complete, orthonormal operator bases, having d non-degenerate eigenvalues
 - Orthonormality: $\langle v_{a,i} | v_{a,j} \rangle = \delta_{ij}$
 - Completeness Relation: $\sum_{i=1}^d |v_{a,i}\rangle \langle v_{a,i}| = \sum_{i=1}^d |v_{b,i}\rangle \langle v_{b,i}| = 1$
 - Nondegeneracy of eigenvalues: $\lambda_{a,i} \neq \lambda_{a,j}$

¹J. Schwinger, "UNITARY OPERATOR BASES", , *Proceedings of the National Academy of Sciences* **46**, 570–579 (1960).

What are MUBs?

J.Schwinger - Complementarity of Unitary Operators¹

Two unitary operators A and B are complementary if

- both generators of complete, orthonormal operator bases, having d non-degenerate eigenvalues
 - Orthonormality: $\langle v_{a,i} | v_{a,j} \rangle = \delta_{ij}$
 - Completeness Relation: $\sum_{i=1}^d |v_{a,i}\rangle \langle v_{a,i}| = \sum_{i=1}^d |v_{b,i}\rangle \langle v_{b,i}| = 1$
 - Nondegeneracy of eigenvalues: $\lambda_{a,i} \neq \lambda_{a,j}$
- all normalized vectors $|v_{a,i}\rangle, |v_{b,i}\rangle$ are maximally incompatible, such that the $p(v_{a,i}, v_{b,j})$ for $a \neq b$ becomes
 - Mutual Unbiasedness:

$$p(v_{a,i}, v_{b,j}) \stackrel{a \neq b}{=} |\langle v_{a,i} | v_{b,j} \rangle|^2 \quad (1)$$

$$\stackrel{a \neq b}{=} \delta_{a,b} \delta_{i,j} + \frac{1}{d} (1 - \delta_{a,b}) \quad (2)$$

$$\stackrel{a \neq b}{=} \frac{1}{d} \quad (3)$$

¹J. Schwinger, "UNITARY OPERATOR BASES", , Proceedings of the National Academy of Sciences 46, 570-579 (1960).

What are MUBs?

J.Schwinger - Complementarity of Unitary Operators¹

Two unitary operators A and B are complementary if

- both generators of complete, orthonormal operator bases, having d non-degenerate eigenvalues
 - Orthonormality: $\langle v_{a,i} | v_{a,j} \rangle = \delta_{ij}$
 - Completeness Relation: $\sum_{i=1}^d |v_{a,i}\rangle \langle v_{a,i}| = \sum_{i=1}^d |v_{b,i}\rangle \langle v_{b,i}| = 1$
 - Nondegeneracy of eigenvalues: $\lambda_{a,i} \neq \lambda_{a,j}$
- all normalized vectors $|v_{a,i}\rangle, |v_{b,i}\rangle$ are maximally incompatible, such that the $\rho(v_{a,i}, v_{b,j})$ for $a \neq b$ becomes
 - Mutual Unbiasedness:

$$\rho(v_{a,i}, v_{b,j}) \stackrel{a \neq b}{=} |\langle v_{a,i} | v_{b,j} \rangle|^2 \quad (1)$$

$$\stackrel{a \neq b}{=} \delta_{a,b} \delta_{i,j} + \frac{1}{d} (1 - \delta_{a,b}) \quad (2)$$

$$\stackrel{a \neq b}{=} \frac{1}{d} \quad (3)$$

MUBs feature the following properties:

- outcomes of systems prepared in an eigenstate of A are equally likely when the prepared system is measured in any eigenbasis of operator B
- Lower bound of entropic uncertainty relations maximized

¹J. Schwinger, "UNITARY OPERATOR BASES", , *Proceedings of the National Academy of Sciences* **46**, 570–579 (1960).

What are MUBs?

Example of MUBs for $d=2$

$$\begin{aligned} B_1 &= \{|0\rangle, |1\rangle\} && \text{Eigenvectors of } \sigma_x \\ B_2 &= \left\{ \frac{|0\rangle + i|1\rangle}{\sqrt{2}}, \frac{|0\rangle - i|1\rangle}{\sqrt{2}} \right\} && \text{Eigenvectors of } \sigma_y \\ B_3 &= \left\{ \frac{|0\rangle + |1\rangle}{\sqrt{2}}, \frac{|0\rangle - |1\rangle}{\sqrt{2}} \right\} && \text{Eigenvectors of } \sigma_z \end{aligned}$$

Bloch sphere representation of qubit^a

^aA. Frisk Kockum, *Quantum optics with artificial atoms*, (2014).

How can MUBs be constructed?

Various constructions via Fourier transformations (pair), Latin squares, Galois fields, generalized Pauli groups but **only for $d=p$ or $d=p^n$!**

How can MUBs be constructed?

Various constructions via Fourier transformations (pair), Latin squares, Galois fields, generalized Pauli groups but **only for $d=p$ or $d=p^n$!**

Pauli group construction²:

- Fourier transformation $|\hat{j}\rangle = \frac{1}{\sqrt{d}} \sum_k \omega^{-jk} |k\rangle$, $\omega = e^{\frac{2\pi i}{d}}$

²T. Durt, et al., "On mutually unbiased bases", *International Journal of Quantum Information* 08, 535–640 (2010).

How can MUBs be constructed?

Various constructions via Fourier transformations (pair), Latin squares, Galois fields, generalized Pauli groups but **only for $d=p$ or $d=p^n$!**

Pauli group construction²:

- Fourier transformation $|\hat{j}\rangle = \frac{1}{\sqrt{d}} \sum_k \omega^{-jk} |k\rangle$, $\omega = e^{\frac{2\pi i}{d}}$
- cyclic unitary operators X and Z (analogously to Pauli matrices)
 - $X|\hat{j}\rangle = |\hat{j}\rangle \omega^j$, $X^d = 1$
 - $Z|k\rangle = |k\rangle \omega^k$, $Z^d = 1$

²T. Durt, et al., "On mutually unbiased bases", *International Journal of Quantum Information* 08, 535–640 (2010).

The MUB Criterion³

Consider two observables a and b on system A and B

Mutual Predictability C_{ab}

$$C_{ab} = \sum_{i=0}^{d-1} P_{ab}(i, i) \quad (4)$$

³C. Spengler, et al., "Entanglement detection via mutually unbiased bases", *Physical Review A* **86**, 022311 (2012).

The MUB Criterion³

Consider two observables a and b on system A and B

Mutual Predictability C_{ab}

$$C_{ab} = \sum_{i=0}^{d-1} P_{ab}(i, i) \quad (4)$$

For a general state ρ

$$C_{ab} = \sum_{i=0}^{d-1} \langle i_a | \otimes \langle i_b | \rho | i_a \rangle \otimes | i_b \rangle \quad (5)$$

If $C_{ab} = 1 \rightarrow$ fully correlated

Else if $C_{ab} = \frac{1}{d} \rightarrow$ completely uncorrelated

³C. Spengler, et al., "Entanglement detection via mutually unbiased bases", *Physical Review A* 86, 022311 (2012).

The MUB Criterion³

Consider two observables a and b on system A and B

Mutual Predictability C_{ab}

$$C_{ab} = \sum_{i=0}^{d-1} P_{ab}(i, i) \quad (4)$$

For a general state ρ

$$C_{ab} = \sum_{i=0}^{d-1} \langle i_a | \otimes \langle i_b | \rho | i_a \rangle \otimes | i_b \rangle \quad (5)$$

If $C_{ab} = 1 \rightarrow$ fully correlated

Else if $C_{ab} = \frac{1}{d} \rightarrow$ completely uncorrelated

For $\rho_{\text{classical corr}} = \sum_s |\lambda_s|^2 |s_a\rangle \langle s_a| \otimes |s_b\rangle \langle s_b|$ and $\psi_{\text{ent}} = \sum_s \lambda_s |s_a\rangle \otimes |s_b\rangle$

$C_{ab} = 1$ possible!

The MUB Criterion³

Consider two observables a and b on system A and B

Mutual Predictability C_{ab}

$$C_{ab} = \sum_{i=0}^{d-1} P_{ab}(i, i) \quad (4)$$

For a general state ρ

$$C_{ab} = \sum_{i=0}^{d-1} \langle i_a | \otimes \langle i_b | \rho | i_a \rangle \otimes | i_b \rangle \quad (5)$$

If $C_{ab} = 1 \rightarrow$ fully correlated

Else if $C_{ab} = \frac{1}{d} \rightarrow$ completely uncorrelated

For $\rho_{\text{classical corr}} = \sum_s |\lambda_s|^2 |s_a\rangle \langle s_a| \otimes |s_b\rangle \langle s_b|$ and $\psi_{\text{ent}} = \sum_s \lambda_s |s_a\rangle \otimes |s_b\rangle$

$C_{ab} = 1$ possible!

Solution: Conduct measurements in multiple MUBs

³C. Spengler, et al., "Entanglement detection via mutually unbiased bases", *Physical Review A* 86, 022311 (2012).

The MUB Criterion

For an arbitrary product state $\rho = |a\rangle\langle a| \otimes |b\rangle\langle b|$

$$?? \leq I_m(\rho_{sep}) = \sum_{k=1}^m C_{kk} = \sum_{k=1}^m \sum_i |\langle i_a|a\rangle|^2 |\langle i_b|b\rangle|^2 \leq 1 + \frac{m-1}{d} \quad (6)$$

For a complete set of $d+1$ MUBs

$$?? \leq I_{d+1}(\rho_{sep}) \leq 2 \quad (7)$$

The MUB Criterion

For an arbitrary product state $\rho = |a\rangle\langle a| \otimes |b\rangle\langle b|$

$$?? \leq I_m(\rho_{sep}) = \sum_{k=1}^m C_{kk} = \sum_{k=1}^m \sum_i |\langle i_a|a\rangle|^2 |\langle i_b|b\rangle|^2 \leq 1 + \frac{m-1}{d} \quad (6)$$

For a complete set of $d+1$ MUBs

$$?? \leq I_{d+1}(\rho_{sep}) \leq 2 \quad (7)$$

Proof: Use inequality of arithmetic and geometric means:

$$\frac{\sum_i^n x_i}{n} \geq \sqrt[n]{\prod_i x_i} \quad (8)$$

Then

$$I_m(\rho_{sep}) = \sum_{k=1}^m C_{kk} = \sum_{k=1}^m \sum_i |\langle i_a|a\rangle|^2 |\langle i_b|b\rangle|^2 \leq \frac{1}{2} \left(\sum_{k=1}^m \sum_i |\langle i_a|a\rangle|^4 + |\langle i_b|b\rangle|^4 \right) \quad (9)$$

The MUB Criterion

For an arbitrary product state $\rho = |a\rangle\langle a| \otimes |b\rangle\langle b|$

$$?? \leq I_m(\rho_{sep}) = \sum_{k=1}^m C_{kk} = \sum_{k=1}^m \sum_i |\langle i_a|a\rangle|^2 |\langle i_b|b\rangle|^2 \leq 1 + \frac{m-1}{d} \quad (6)$$

For a complete set of $d+1$ MUBs

$$?? \leq I_{d+1}(\rho_{sep}) \leq 2 \quad (7)$$

Proof: Use inequality of arithmetic and geometric means:

$$\frac{\sum_i^n x_i}{n} \geq \sqrt[n]{\prod_i x_i} \quad (8)$$

Then

$$I_m(\rho_{sep}) = \sum_{k=1}^m C_{kk} = \sum_{k=1}^m \sum_i |\langle i_a|a\rangle|^2 |\langle i_b|b\rangle|^2 \leq \frac{1}{2} \left(\sum_{k=1}^m \sum_i |\langle i_a|a\rangle|^4 + |\langle i_b|b\rangle|^4 \right) \quad (9)$$

Because for any pure state $|a\rangle$ it holds $\sum_{k=1}^m \sum_{i=0}^{d-1} |\langle i_k|a\rangle|^4 \leq 1 + \frac{m-1}{d}$, we have

$$I_m \leq 1 + \frac{m-1}{d} \quad (10)$$

Special Simplex in $\mathcal{H}_d \otimes \mathcal{H}_d$

The Case of $d=3$

	$\langle \mathfrak{W}_1 \rangle_{PM}$	$\langle \mathfrak{W}_2 \rangle_{PM}$
$q[1]$	$\frac{5}{3}(-1 + \sqrt{3})$	$\frac{5}{3}(-1 + \sqrt{3})$
$q[2]$	0	0
$q[3]$	$\frac{2}{3}$	$\frac{2}{3} - \frac{1}{\sqrt{3}}$
$q[4]$	$\frac{2}{3} - \frac{1}{\sqrt{3}}$	$\frac{2}{3}$
$2 - I_d$	$1 - \frac{2}{\sqrt{3}}$	$1 - \frac{2}{\sqrt{3}}$

Table of optimized parameters $q[i]$ for 2 witnesses

	$\langle \mathfrak{W}_1 \rangle_{PM}$	$\langle \mathfrak{W}_2 \rangle_{PM}$
$q[1]$	$\frac{5}{9}(-5 + 3\sqrt{3})$	$\frac{5}{3}(-5 + 4\sqrt{3})$
$q[2]$	$-\frac{16}{9}$	$\frac{8}{9}(-2 + \sqrt{3})$
$q[3]$	0	0
$q[4]$	$-\frac{1}{\sqrt{3}}$	$\frac{1}{\sqrt{3}}$
$2 - I_d$	$1 - \frac{2}{\sqrt{3}}$	$1 - \frac{2}{\sqrt{3}}$

Table of optimized parameters $q[i]$ for 2 witnesses with $q[3] = 0$

Special Simplex in $\mathcal{H}_d \otimes \mathcal{H}_d$

Bound Entanglement Detection for $d=4-5$

	$d=4$	$d=5$
$2-I_d$	$-\frac{1}{8}$	$-1 + \frac{2}{\sqrt{5}}$

Special Simplex in $\mathcal{H}_d \otimes \mathcal{H}_d$

Generalization of Witnesses to higher Dimensions

- witnesses can be rewritten as
$$\mathfrak{W}_i = (2 - d) P_{00} + 2 \sum_{m=1}^{d-1} P_{m0} + \sum_{m=0}^{d-1} \sum_{n=1}^{d-1} (1 - \delta_{ni}) P_{mn}$$
- for even dimensions $d \leq 8$ not all Weyl-shifted witnesses (optimally) detect bound entanglement

\mathfrak{W}_i	d=6	d=7	d=8
\mathfrak{W}_1	-0.091752	-0.08136	-0.07322
\mathfrak{W}_2	-0.091752	-0.08136	-0.07322
\mathfrak{W}_3	$-1.14826 \cdot 10^{-6}$	-0.08136	-0.07322
\mathfrak{W}_4	-0.091752	-0.08136	$-2.13422 \cdot 10^{-7}$
\mathfrak{W}_5	-0.091752	-0.08136	-0.07322
\mathfrak{W}_6	-	-0.08136	-0.07322
\mathfrak{W}_7	-	-	-0.07322

Table of optimal values for bound entanglement for $6 \leq d \leq 8$

Summary:

- $\exists \rho_{PPT,ent} \in \mathcal{H}_d \otimes \mathcal{H}_d$ with $d \geq 3$
- characterizing ρ with respect to its separability \rightarrow NP hard!
- introduce reduced state space (simplex)
- turn to MUB witnesses to detect classes of such states

Future goals:

- new bounds on bound entangled and separable states within the magic simplex
- investigate lower bound of MUB criterion
