Introduction to Machine Learning and Deep Learning

Tuesday, 18 September 2018 10:00 (1 hour)

From self-driving cars to voice-activated intelligent assistants and robots reading and mimicking human emotions, machine learning and deep learning are not only revolutionizing several industry sectors but they are slowly and steadily becoming part of our daily lives.

This talk will provide an overview of deep learning, namely of modern, multi-layered neural networks trained on big data. In the talk the

basic theory of deep learning and of neural networks' training and optimization will be introduced. Then, the main types of deep

learning models will be presented, together with some relevant applications in the fields of computer vision, robotics and natural

language process.
