Hands-on: Deploy ML Frameworks 101

Tuesday, 18 September 2018 16:30 (1h 30m)

This Hands-On session is dedicated to train your skills in area of Machine Learning (aka ML 101 course). We'll start with an Iris dataset and build our first ML model for it. Then we'll gradually expand our model to include various ML techniques, like ensemble learning, introduce concept of cross-validation and build simple Neural Network model. This session only requires basic Python programming skills and understanding of basic ML concepts.
