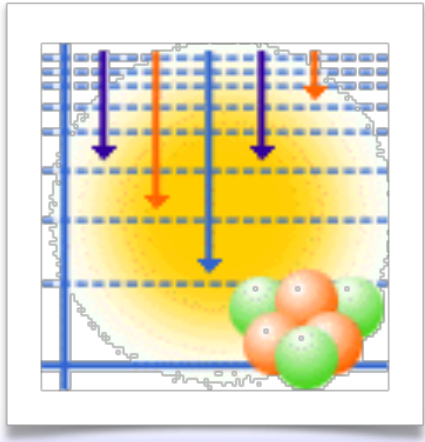
Masses & Beta-Decay Spectroscopy of Neutron-Rich Nuclei: Isomers & Sub-shell Gaps with Large Deformation

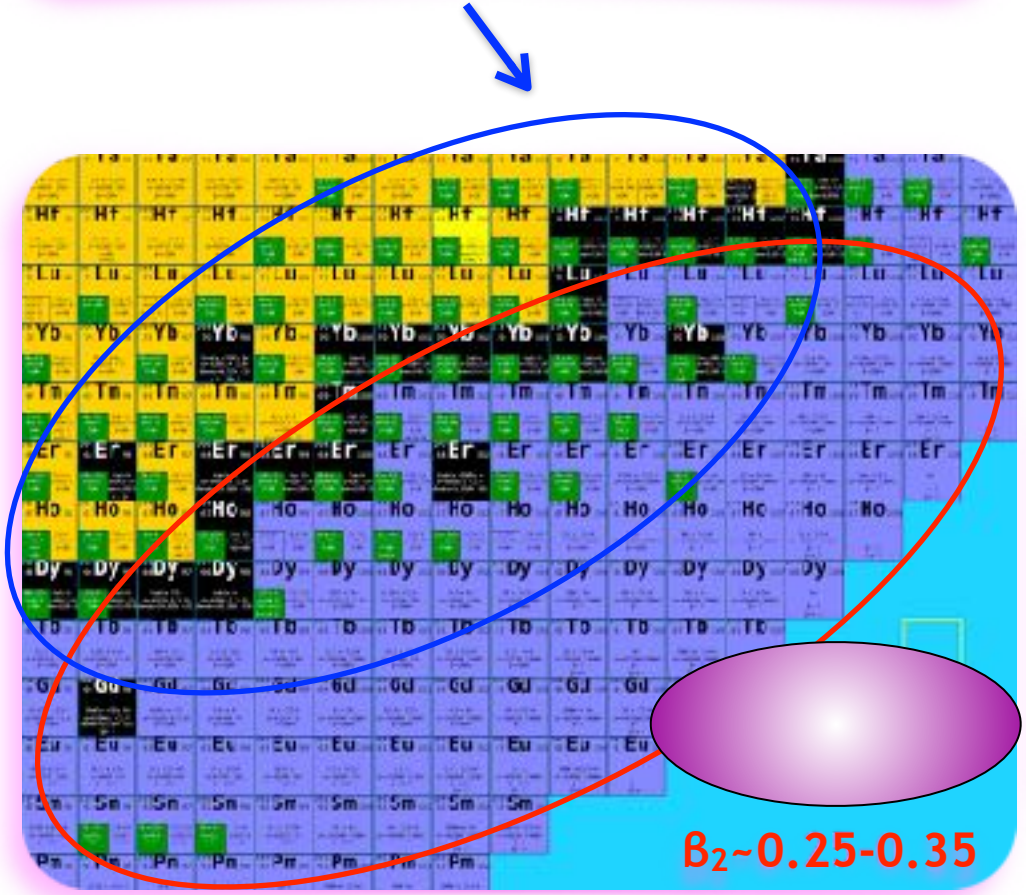
F.G. Kondev
Physics Division, Argonne National Laboratory

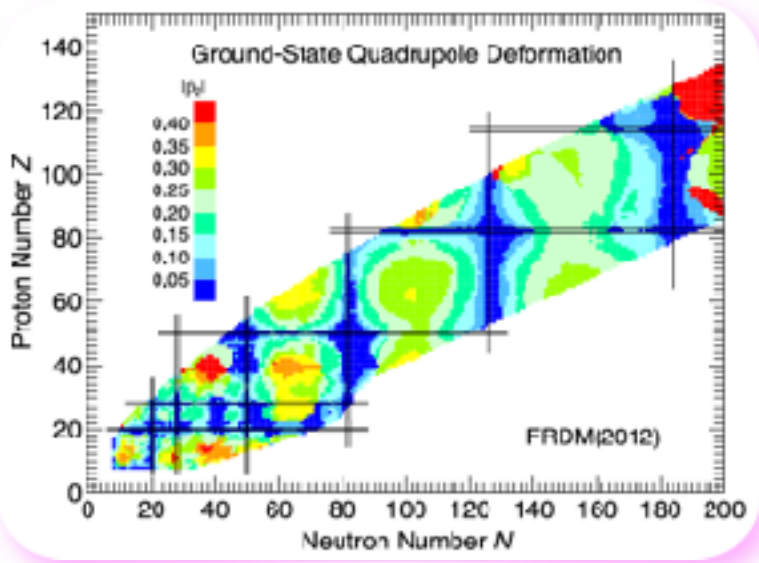


Nuclear Structure & Dynamics 2019, May 13-17, Venice, Italy

Introduction

- **classical rare-earth region** - close to stability - modest deformation - test ground for the development of deformed shell model



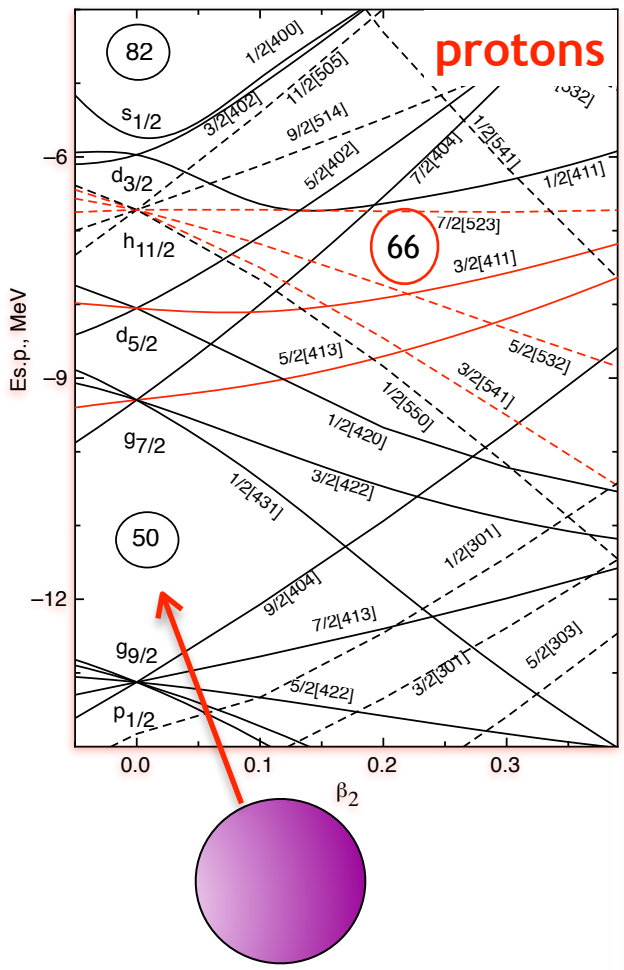


P. Moller *et al.*, ADNDT **109-110** (2016) 1

light rare-earth region

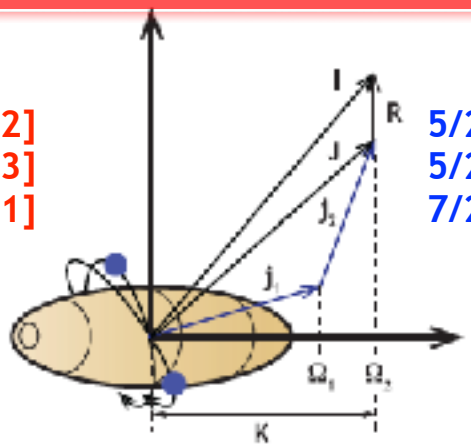
- terra incognita - not easy to get there …
  - ✓ prompt-fission studies with GS - mostly along the yeast line …
  - ✓ in-flight fission & fragmentation (RIKEN) - beta-decay studies …
- well-deformed *n*-rich nuclei

Deformed Nuclei & Shell Gaps



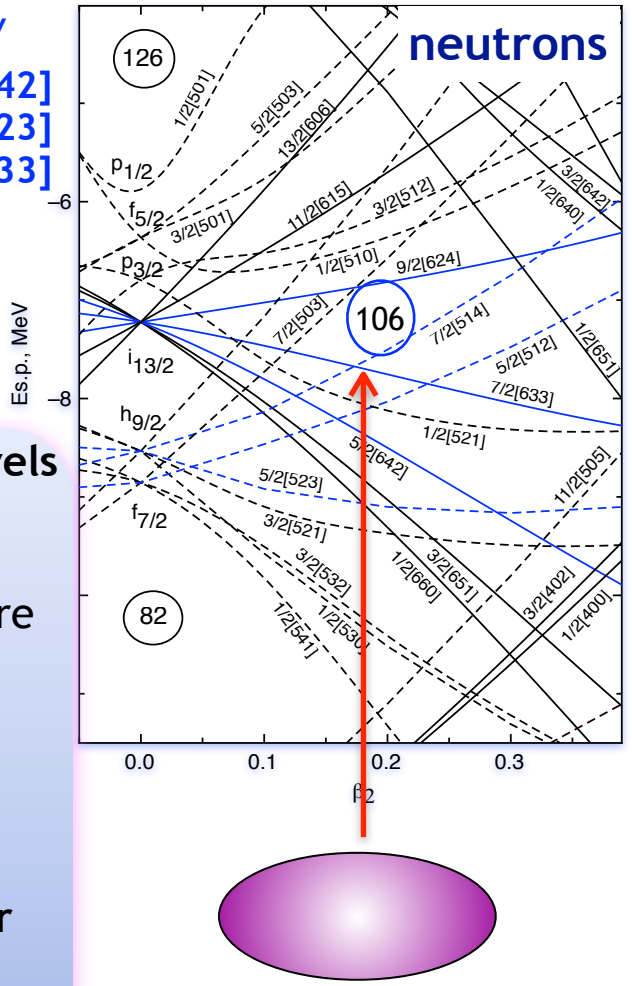
Ω_π

5/2[532]
5/2[413]
3/2[411]

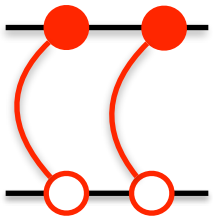


Ω_ν

5/2[642]
5/2[523]
7/2[633]



- **ordering of single-particle levels**
- **size of deformation**
  - ✓ how it evolves with N & Z; are there shape changes?
- **pairing and residual nucleon-nucleon interactions**
- role of the **K-quantum number**
  - ✓ both in γ-decay (K-isomers) and ß-decay (spin-trap isomers)



2+

0+

$$E = \frac{\hbar^2}{2\Im(\Delta,\beta)} I(I+1)$$

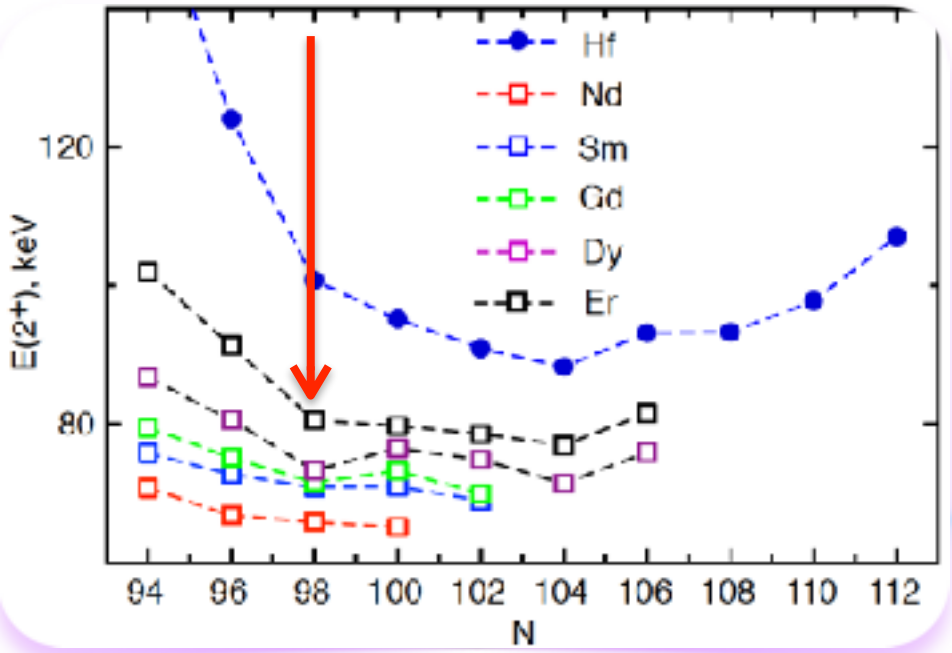
2+

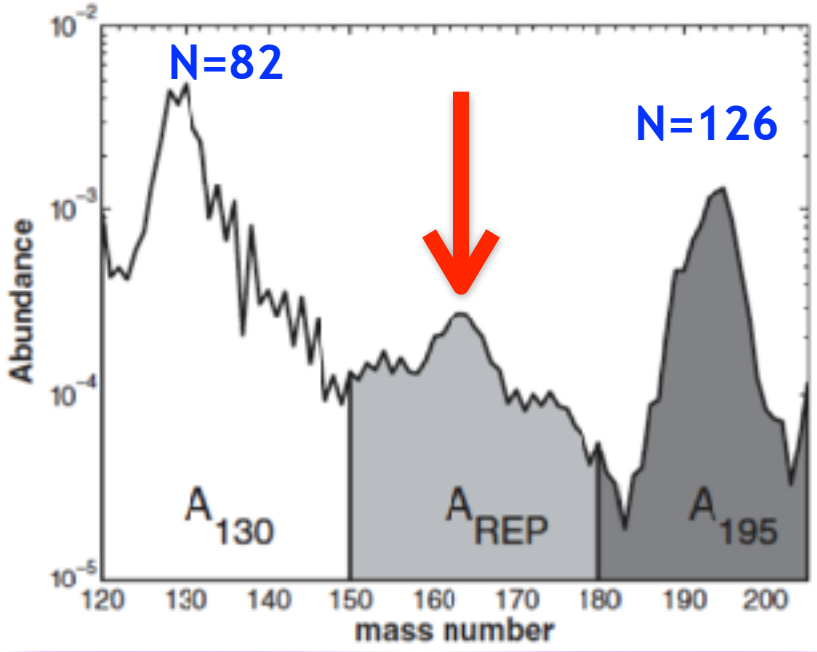
0+

Motivation

- basic nuclear data: masses, $T_{1/2}$, P_n, etc.,
  ✓ need detailed knowledge on nuclear structure to improve predictions for nuclei that won't be observed

M.R. Mumpower *et al.*, J. Phys. G **44 (2017)** 034003

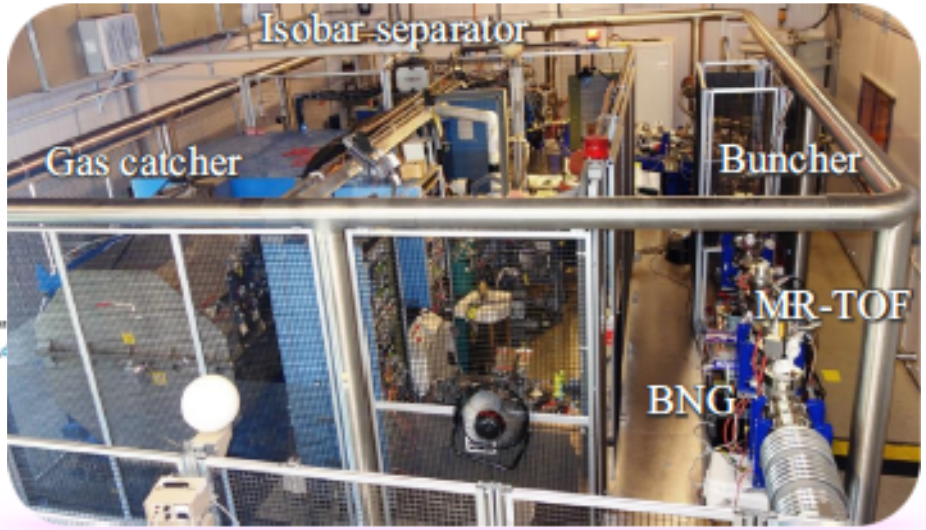




- unusual nuclear structure behavior near N= 98 (Gd,Dy,Sm)

CARIBU & ANL

- SF fission of ^{252}Cf (3.1%) 1.7 Ci - 6.310^{10} dps
- Gas Catcher, Isobar Separator (m/Δm~10000), MR-TOF (m/Δm~100,000), CPT (m/Δm~1,000,000)
- LE, high-purity & high-quality beams



First operation and mass separation with the CARIBU MR-TOF

Tsviki Y. Hirsch [a,b,e], Nancy Paul [b,c], Mary Burkey [b,d], Ani Aprahamian [c], Fritz Buchinger [e], Shane Caldwell [b,c], Jason A. Clark [b], Anthony F. Levand [b], Lin Ling Ying [b], Scott T. Marley [c], Graeme E. Morgan [a,b], Andrew Nystom [b,c], Rodney Orford [b,c], Adrian Pérez Galván [b,a], John Rohrer [b], Guy Savard [b,d], Kumar S. Sharma [a], Kevin Siegl [b,c]

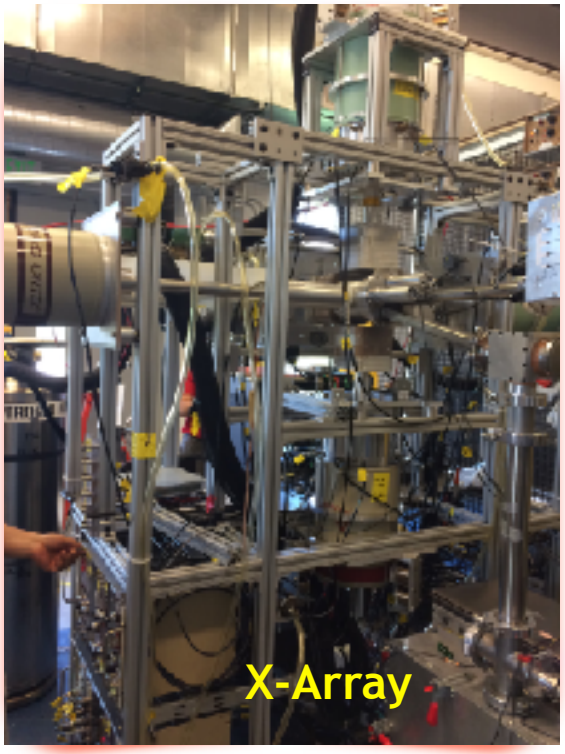
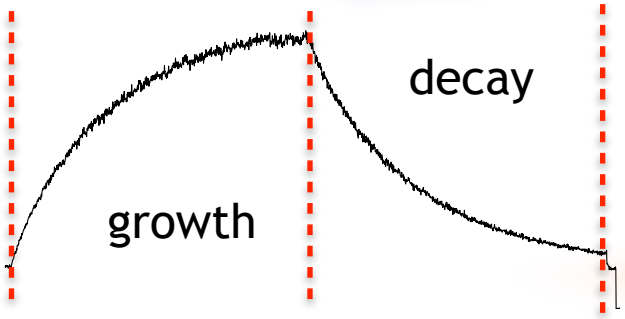
The X-Array and SATURN: A new decay-spectroscopy station for CARIBU

A.J. Mitchell[a,*], P.F. Bertone[b,1], B. DiGiovine[b], C.J. Lister[a], M.P. Carpenter[b], P. Chowdhury[a], J.A. Clark[b], N. D'Olympia[a], A.Y. Deo[a,2], F.G. Kondev[b,r], E.A. McCutchan[b,1], J. Rohrer[b], G. Savard[b,d], D. Seweryniak[b], S. Zhu[b]

- X-Array (4 Ge CLOVERs) & 1 LEPS
- large plastic scintillators
- SATURN moving tape station

- direct implantation on the tape
- control the growth & decay times - resolving states with different $T_{1/2}$
- detailed spectroscopy: β-γ-γ—time coin





- **CPT, MR-TOF & PI-ICR:** high purity & mass resolution - identification of **long-lived** isomers

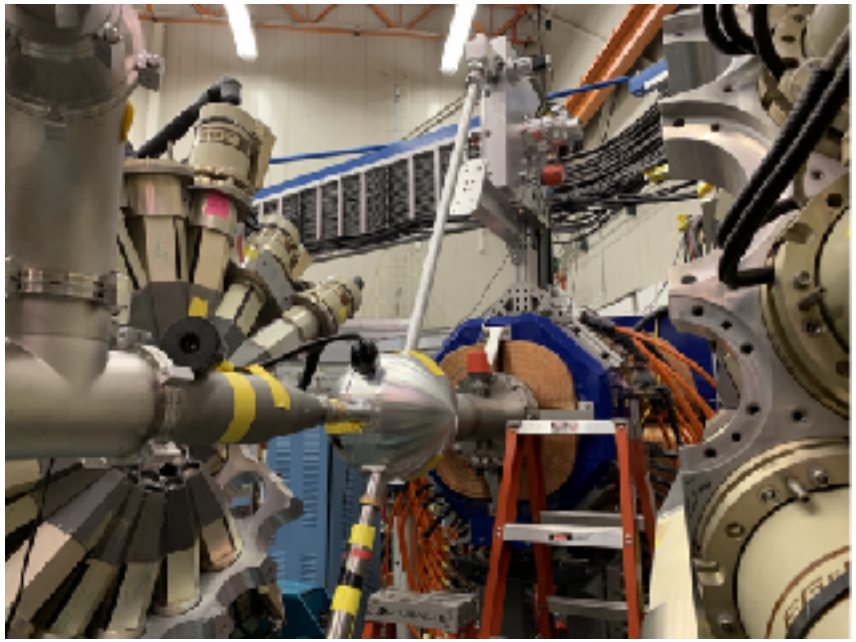
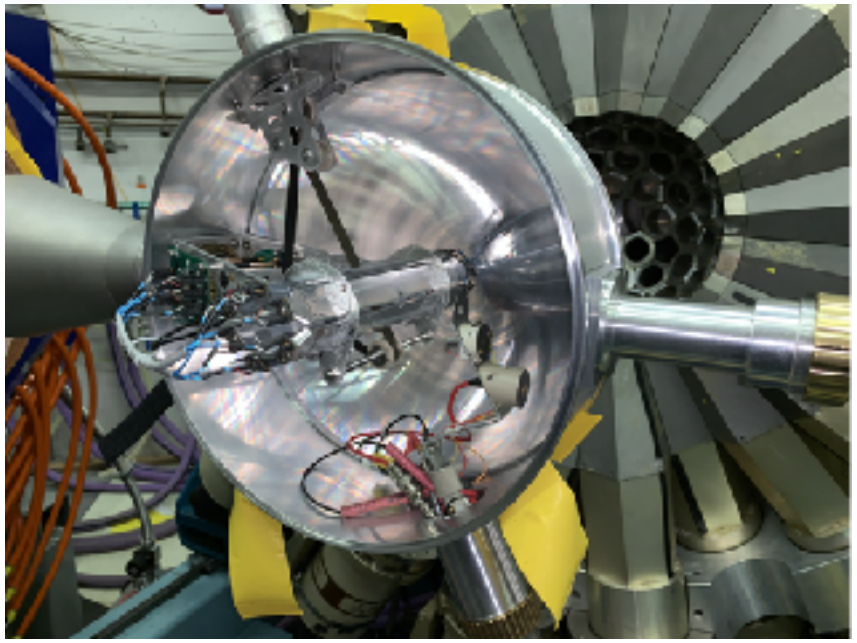
New Development

Decay spectroscopy with Gammasphere

new Decay Data Station at Gammasphere - commissioned December 17-22, 2018
target chamber (WUSL), tape station (LSU) and ß- particle detector arrays (ANL)





- flexible selection of different growth & decay cycles
- increased sensitivity for fast-decaying nuclei (down to 100 of ms); resolving isomers

- **HEART** - Hexagonal Array for Triggering
  - ✓ 6 EJ-204 plastic scint. & 12 SiPM
  - ✓ ε_{β}=75 (2)% from ß-γ singles & coin.
- powerful γ-γ-ß-t coincidence device

Commissioning experiment - ^{146}La decay

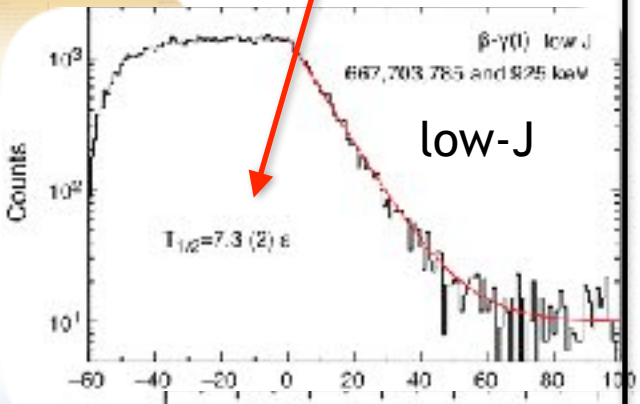
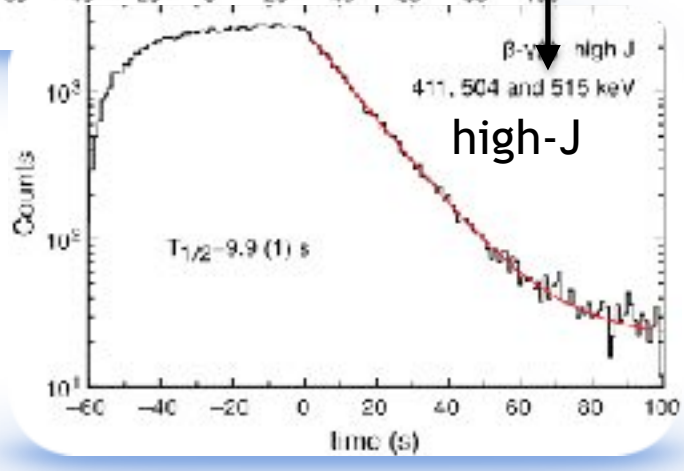
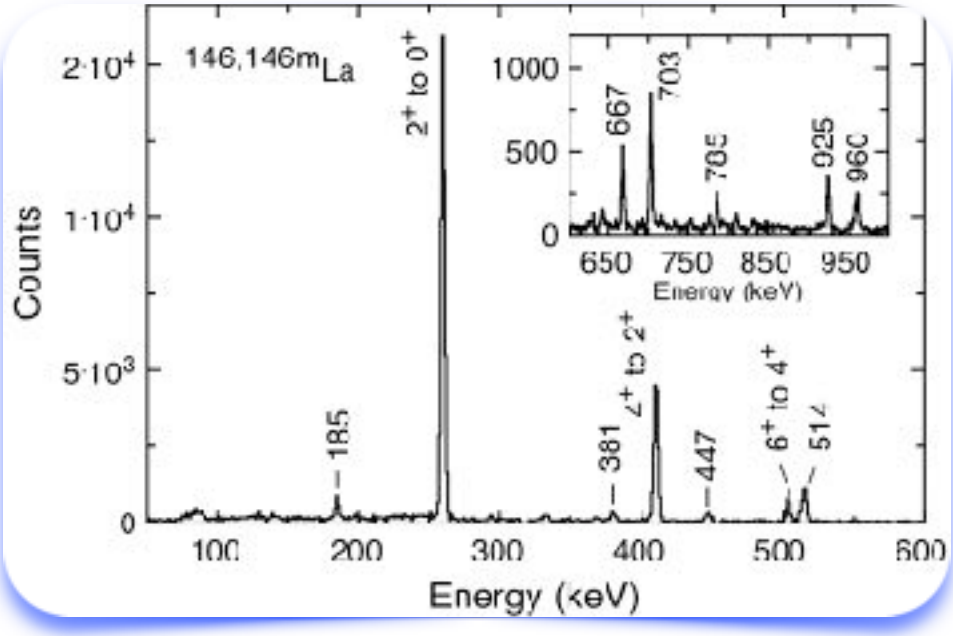
Nilsson assignment

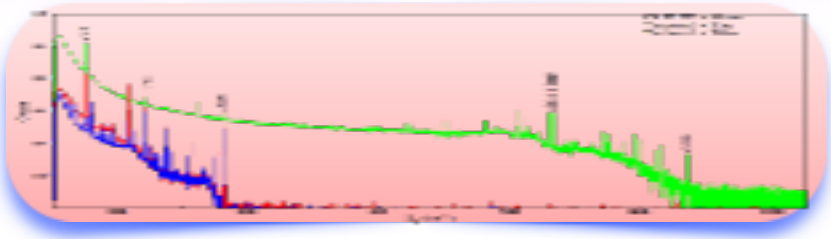


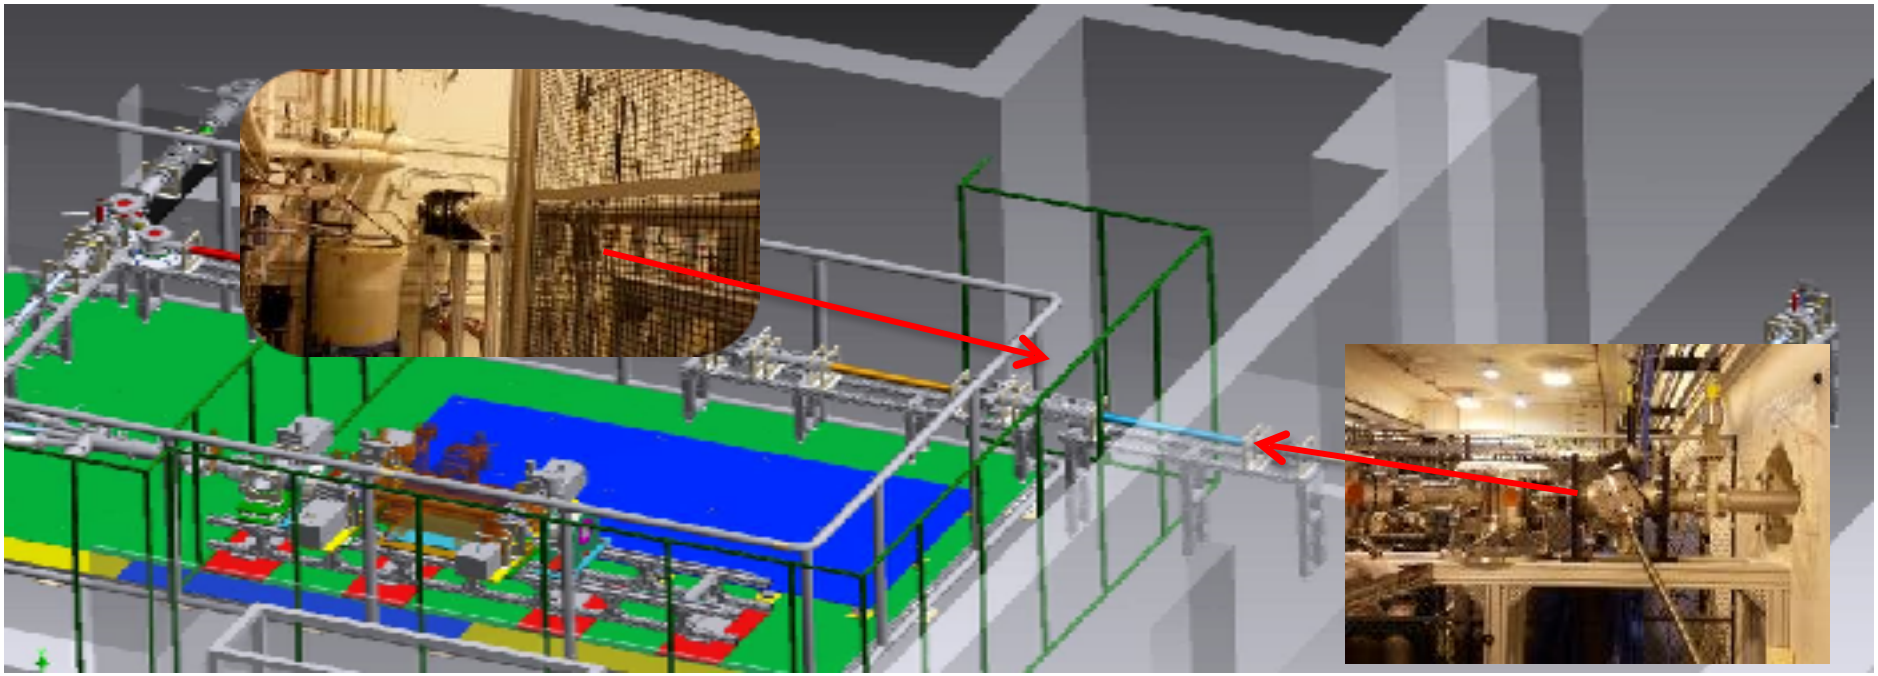




New LE CARIBU experimental area

- ANL tandem was removed in March 2019
- services in place and first beam line installed
- new experiments expected to start this summer





Outlook & Conclusions

- direct mass measurements in conjunction with detailed ß-decay studies are powerful tool to elucidate properties of neutron-rich nuclei - details matter!

- CARIBU produces high-quality LE beams with sufficient yield for **detailed** spectroscopy - examples on ^{162}Eu, ^{160}Pm & ^{164}Tb - decay properties, isomers, excitation energies, sub-shell closures … **limitations** - the high background in the LE area - a new beam line has been built and will be operational later this year - continue exploring the A~160 light rare-earth region

- decay spectroscopy measurements with Gammasphere - new moving-tape system & beta-particle detector array - Decay Data Factory - bringing GS into the new LE area & run continuously for ~6 months - a workshop planed in ANL later in the fall
