Title: Search for neutrino bursts from gravitational collapse of stars at the Baksan
Underground Scintillation Telescope

Abstract (less than 10 lines):

Current status and results of the experiment on recording neutrino bursts are
presented. The observation time (since 1980) is 24.7 years. The upper bound of
collapse frequency in our Galaxy is $0.093 \text{ } \text{y}^{-1}$ (90\% CL).
