Interdisciplinary aspects and
applications related to the SPES project
Ferrara, Italy

29th of January 2019

The MEDICIS Facility

Overview, 2018 operation report and plans for CERN long shutdown 2

MEDICIS Coordinator – new function

- Schedule target irradiation and isotope separation
 - Machine development or MEDxxx
- Schedule and coordinate interventions and technical stops
- Liaise with:
 - ISOLDE physics coordinator
 - MEDICIS project leader
 - ISOLDE technical coordinator
 - ISOLDE machine supervisors (protons)
 - MEDICIS operators
 - Radiation protection staff
- PhD in Materials Science and Engineering
- +7 years of radioactive ion beam development (ISOLDE target operation)
- Tasks:
 - 50% MEDICIS Coordination
 - 50% Research
 - Target and ion source development

Coordinating MEDICIS
since August 2018

MEDICIS overview

J.P. Ramos | 29th of January 2019

Inter. aspects and app. related to the SPES project

CERN

In 2016, **16868** working on 2 sites*:

- 2560 staff
- 750 fellows
- 13558 external (scientists, training, etc.)

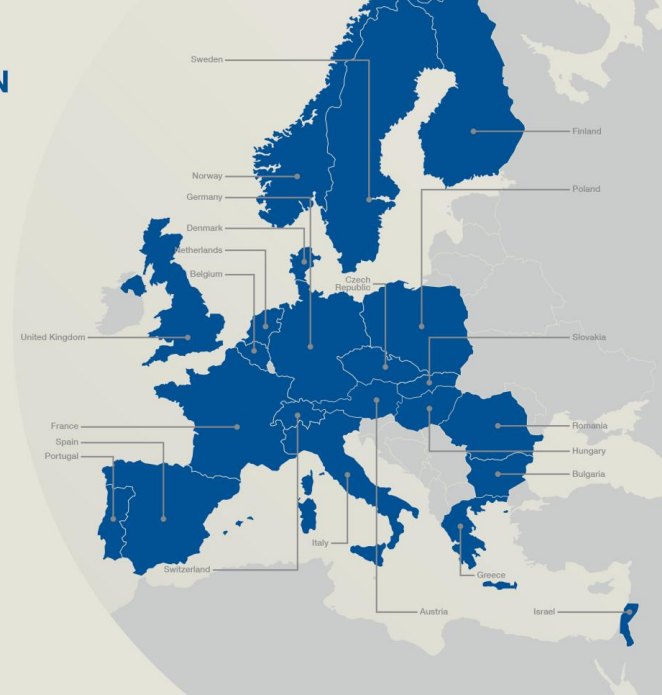

J.P. Ramos | 29th of January 2019

Inter. aspects and app. related to the SPES project

The twenty two Member States of CERN

Member States (date of accession)

	Austria (1959)		Romania (2016)
	Belgium (1953)		Slovakia (1993)
	Bulgaria (1999)		Spain (1961-1968, 1983-)
	Czech Republic (1993)		Sweden (1953)
	Denmark (1953)		Switzerland (1953)
	Finland (1991)		United Kingdom (1953)
	France (1953)		
	Germany (1953)		
	Greece (1953)		
	Hungary (1992)		
	Israel (2014)		
	Italy (1953)		
	Netherlands (1953)		
	Norway (1953)		
	Poland (1991)		
	Portugal (1986)		

*CERN Personnel Statistics 2016, <https://cds.cern.ch/record/2265782>

- Funded by the 22 members states
- Budget of **+1.1 Billion CHF/year**
- With Israel as a member state, it has surpassed the European borders

Operation

Insert target

- 12 min – protons stopped (only at HRS)

Irradiation

- Transparent to ISOLDE

Retrieve target

- 12 min – protons stopped (only at HRS)

Decay

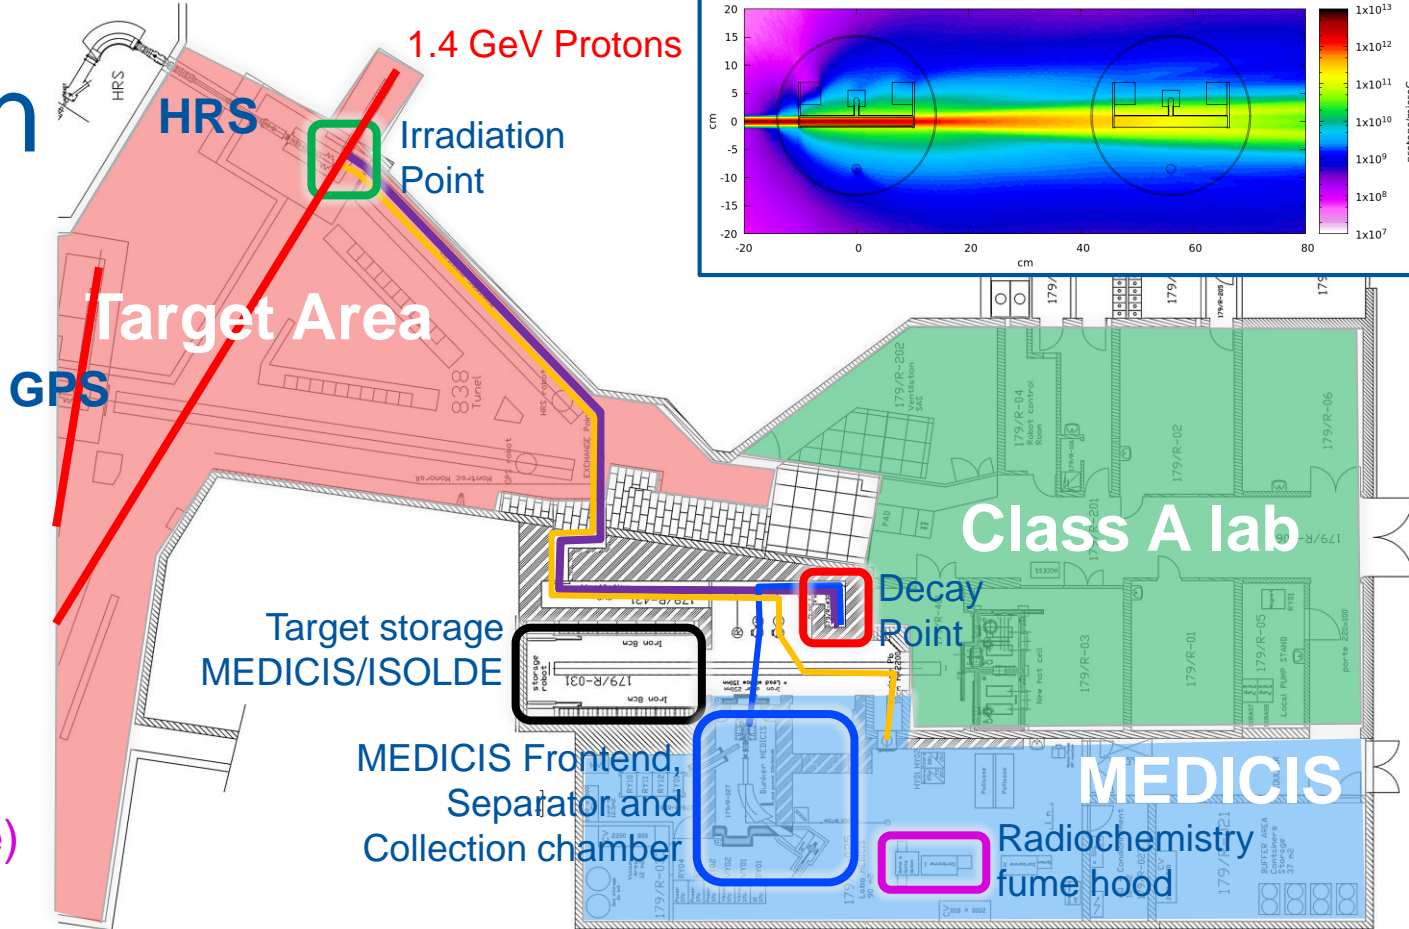

- Until target reaches $<1\text{ Sv/h}$ (at 26 cm)

Install in Frontend

- Isotope Extraction

Radiochemistry (future)

- Chemical purification
- Shipping

ISOL Isotope Separation OnLine

1. Production
2. Diffusion
3. Effusion
4. Ionization
5. Mass Separation
6. Transport

$$Beam\ Int. = \sigma \cdot j \cdot N_t \cdot \varepsilon$$

$$\varepsilon = \varepsilon_{diff} \varepsilon_{eff} \varepsilon_{is} \varepsilon_{sep} \varepsilon_{trans}$$

N_t – Nr of exposed atoms [dim]

j – Proton flux [cm⁻²]

σ – Cross section [mb]

ε – Efficiency [%]

$$r = \frac{mv}{qB} = \frac{mE_s}{qBB_s}$$

MEDICIS Irradiation modes

Standard mode of operation

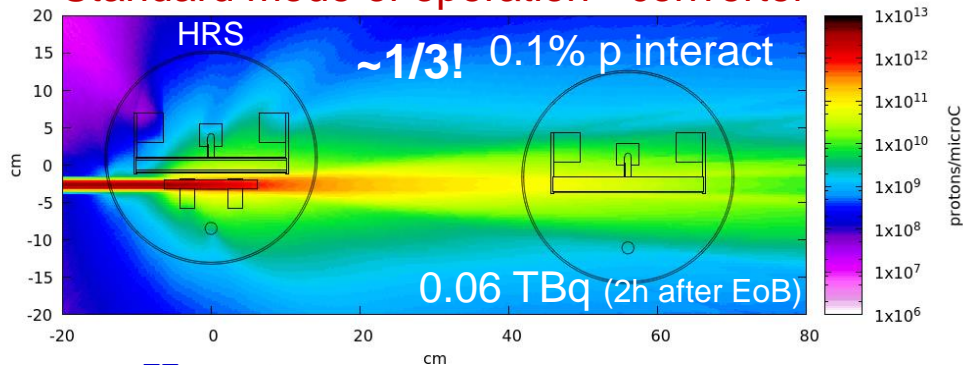

2.3E18 p (3 days)
0.5 Sv/h
30 min after EOB

1.5E18 p (2 days)
1.9 Sv/h
30 min after EOB

Factor 6x seen in practice (TBC)

Use proton beam during setup times, no interaction to ISOLDE

Standard mode of operation - converter

New mode of operation (if no n-conv in HRS)

MEDICIS Scheduling

Wk23
1st wk
June

ISOLDE

GPS

HRS

MEDICIS

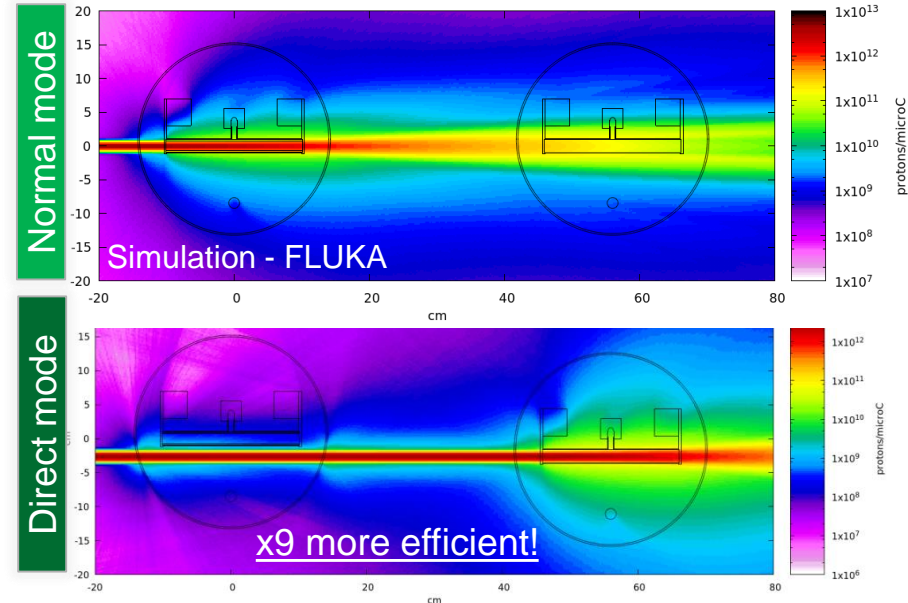

MO		4	4	Normal mode
TU	#626 Ta - W	IS610		Direct mode
WE				
TH				
FR		#634 LIST		No irradiation
SA	COLLAPS			
SU	IS649			
	Sc RILIS	RILIS: In		

Experiment (radioactive)
Protons are already in HRS

Experiment in GPS
No protons available

Machine setup time
No protons necessary at GPS or HRS
Switch protons on for MEDICIS

MEDICIS has its target at HRS

MEDICIS Collaboration

1st MEDICIS Collaboration Board Meeting

📅 Wednesday 21 Feb 2018, 09:00 → 17:00 Europe/Zurich

📍 4-3-001 (CERN)

Description [Liste de participants:](#)

- Thierry Stora (CERN)
- Frédéric Bordry (CERN's Director for Accelerators and Technology)
- Simone Gilardoni (CERN)
- Thomas Elia Cocolios (KULeuven)
- Prof. Oyen Wim (ICR – Institute of Cancer Research, UK)
- Nick van Dermeulen (PSI)
- Antonio Paulo (Instituto Superior Técnico, Portugal)
- Dr. Michel Forni (Hôpital de La Tour, Geneva)
- Prof. Ismael Martel Bravo (FABRIS - Fundación Andaluza Beturia para la Investigación en Salud, Spain).
- Prof. Ferid Haddad (Arronax, France)
- Prof. Klaus Wendt (University of Mainz, Germany)
- Prof. Martin Walter (Head of Nuclear Medicine and Molecular Imaging, Geneva Hospital)
- Gerda Neyens (CERN)
- David Vierthl (Lausanne University Hospital Center)
- Dante Gregorio (CERN)
- Tor Bjørnstad (IFE – Institute for Energy Technology, Norway)
- Frank Bruchertseifer (European Commission)

[Via remote-connection:](#)

- Prof. Susanta Lahiri (SINP - The Saha Institute of Nuclear Physics, India)
- Dr Martyn Sené (Deputy CEO for the National Physical Laboratory - NPL)
- Prof. John Prior Head of Nuclear Medicine and Molecular Imaging, Lausanne University Hospital Center)

2nd Board happened in 3rd of October

3rd Board will happen 20th of March

4th Board will happen 18th of September

J.P. Ramos | 29th of January 2019

Inter. aspects and app. related to the SPES project

MEDICIS during 2018

J.P. Ramos | 29th of January 2019
Inter. aspects and app. related to the SPES project

MEDICIS Tb extraction efficiency

MD4 – ^{155}Tb – Mid August 2018

Irradiation for 2 days ($1.5\text{E}18$ protons)

MEDICIS Tb extraction efficiency

Irradiation for 2 days
($1.5E18$ protons)

6.9 GBq – ^{155}Tb
24 h after EoB

Extracted:
49.7 MBq
(5 days after EoB)

Extraction
efficiency:
1.2%*

ISOLDE – 1.5% ^{149}Tb (600 MeV – 80s-90s)

Already reached 5%
End of September

*value fluctuates from target to target

* ^{155}Tb after EoB – 4.0 GBq 6

Target production

Targets reused up to 5 times!

MEDICIS budget and manpower contribution

Total targets assembled end of 2018 : **49**

- Delivered to ISOLDE: **29**
- Delivered to MEDICIS: **10** + 2 in December
- Used for development: **8** (16%)

#	Isotope	Target	Ion source
5 (4)	$^{149,152,155}\text{Tb}$, ^{165}Tm	Tantalum (3 with O ₂ leak)	Surface – Rhenium/Tungsten
1		Large container Ta	Surface - Tungsten
2 (1)	$^{225}\text{Ra(Rn)}$, ^{67}Cu	Uranium carbide	VADIS – Hot transfer line
2 (1)	^{47}Sc	Titanium	VADIS – Hot transfer line
4	^{169}Er , $^{155,152}\text{Tb}$	External source - ILL (Grenoble), Arronax (Nantes), NMC (Riga)	Surface – Rhenium/Tungsten
1	Any (^{11}C)	Proton irradiation stand (any material) – no source	

15 targets (12 in 2018) since MEDICIS startup (Oct 2017)

12 targets still operational

MEDICIS has a quota of 10 targets per year
Have more now, but will reuse in 2019!

MEDICIS Statistics

26 irradiations
19 isotope extractions (or attempts)

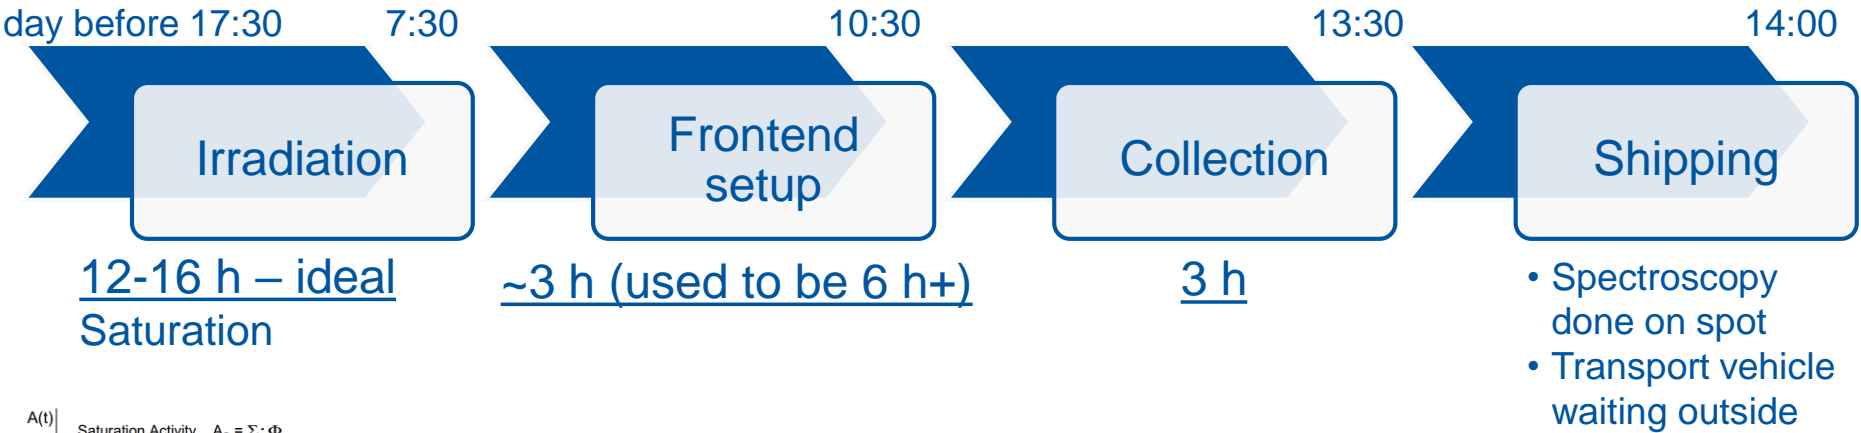

From ISOLDE
physics run,
MEDICIS Irradiated
~5 hours/day
~1.5 days/week

1092 HOURS OF IRRADIATION
138 shifts - 45.5 days

^{149}Tb – race against time

1. Vacuum pumping (30 min)
2. Water cooling (HV operation) – used to be 4 h, now is 15 min
3. Target heating (~1.5 h)
4. Beam setup (with target below optimum release T) – 1 h

Challenging! Need good coordination and good team!

Results from MEDICIS

Activities from few MBq to 100 MBq

- Still improving!

Main Achievements:

- Extraction of ^{155}Tb
 - Delivery of ^{155}Tb to NPL (England) and then to C2TN (Portugal)
- Extraction of ^{149}Tb (impure)
- Extraction of $^{149}\text{Tb} + ^{16}\text{O}$ (almost pure)
 - Delivery to CHUV (Lausanne)
- Separation and extraction of ^{169}Er – ILL external source
 - Fulfilled MEDICIS experiment
- Extraction of ^{165}Tm – opportunistic isotope – 120 MBq (>99% pure)
 - Delivered to CHUV (Lausanne)
- ^{11}C diffusion studies (with help from SSP)
 - Fulfilled MEDICIS Experiment

Ongoing Tb experiments:

- Tb activities are increasing and being more consistent

Problems:

- Mass separator hall probe
 - Low resolution at high masses
- Large container target broken
- Collection chamber sample arm
- No ^{47}ScF due to gas problem
- No ^{67}Cu and ^{225}Ra due to technical problems on the UCx targets
- Frontend electrode stuck

(extraction electrode stuck)

Integrated
SPES design
with some
modifications

1. Mechanism being assembled
2. Stress tests – many cycles
3. Installation at MEDICIS (Mar 2019)
4. Installation at ISOLDE (2019)

^{149}Tb implantation in salt

Normal:
Zn coated Au foil

Advantages:

- Potassium Nitrate (KNO_3) – easy dissolution
- Collection on the TbO mass ($149+16 = 165$)
- No contaminants – simplify radiochemistry
- Low activity (1.8 MBq)
- **Development on-going to promote TbO formation**

Almost pure sample

- Normal 1 Tb to 20 contaminant
- Now: 1.8 Tb to 1 contaminant (Gd)

V1

V2

V3

Large Ta container

ISOLDE

2 cm diameter
20 cm length
60 cm³ volume

MEDICIS

5 cm diameter
10 cm length
200 cm³ volume

V. Samothrakis, M. Ballan, S. Marzari, et al.

1000A (normally ~750A)
Reach 2400 °C

J.P. Ramos | 29th of January 2019

Inter. aspects and app. related to the SPES project

Plans for CERN Long Shutdown 2

J.P. Ramos | 29th of January 2019

Inter. aspects and app. related to the SPES project

CERN Long Shutdown 2 (LS2)

LS2 = no protons for ~2 years at CERN (upgrade and maintenance)

MEDICIS is probably one of the few facilities at CERN that runs during LS2

^{169}Er from ILL in Grenoble
 $^{152,155}\text{Tb}$ from Arronax in Nantes
 ^{47}Sc from NMC in Riga

Operation of 1 to 2 weeks per month

Plan of 2 technical stops – for maintenance and upgrades

- MELISSA, radiochemistry, others...

MELISSA - Lasers at MEDICIS

During Technical stop 1

TODO list:

- Room (floor, painting and SAS) ✓
- Ventilation ✓
- Laser tables ✓
- Infrastructure (power, network) ✓
- Laser safety system **Ongoing**
- Laser optics installation **End of Jan**
- Commissioning of laser beam to frontend **Early February**
- Stable beam tests (Er, Tb, Sm – one laser) **Last week of February**
- Radioactive laser ionized Tb **Early March**

Work of V. Gadelshin

Max efficiency for Tb: 5%

(J.P. Ramos and T. Stora)

Max efficiency for Er: 0.3%

(R. Formento)

1st laser is here

2nd coming in February

J.P. Ramos | 29th of January 2019

V. Fedosseev, V. Gadelshin, B. Marsh

Inter. aspects and app. related to the SPES project T.E. Cocolios, K. Dockx, K. Wendt,

Radiochemistry at MEDICIS

Zn deposited in Au foil

KNO_3 deposited in Al foil

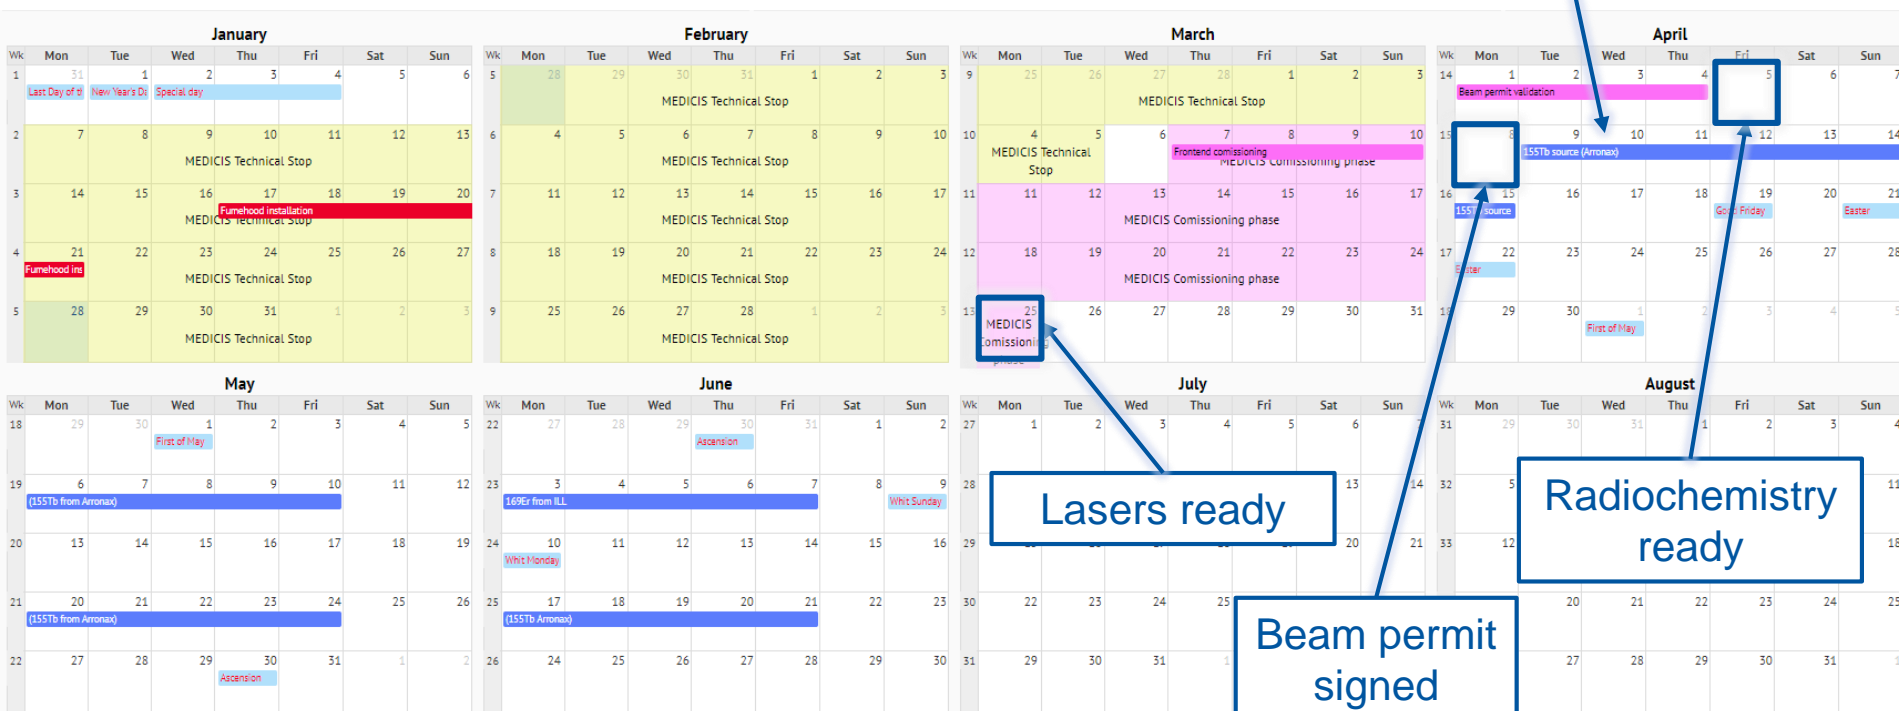

- In development
- No licensing at MEDICIS yet (2018)
- Radiochemistry was being done with partners
- Planed radiochemistry commissioning during technical stops.

Radiochemistry
fume hood
installed this
month in
MEDICIS lab

Schedule MEDICIS June-19 ^{1st} collection of 2019

Lasers ready

Beam permit signed

Radiochemistry ready

Thank you! Merci! Obrigado!

Comments or questions?

A **big thanks** to the MEDICIS local team (**the dream team**):

Thierry Stora (project leader), Cristina Ferrari (secretary), Richard Catherall (Section leader)

Radiochemistry: Moazam Khan, Nhat-Tan Vuong

Robot Operation: Giordano Lili, Giacomo Lunghi, Jean Luis Grenard

Safety: Ana Paula Bernades, Julien Riegert, Beatriz Conde Fernandez

Operation: Laura Lambert, Eric Chevallay, Pascal Fernier

Spectro and shipping: Nicolas Riggaz, Philippe Bertreix

RP: Fabio, Pozzi, Alexandre Dorsival, Matthieu Deschamps, Elodie Aubert

Engineering: Stefano Marzari, Vasileos Samothrakis, Vincent Barozier

LabVIEW and controls: Kevin Develle, Cedric Charrondiere, Christophe Mitifiot

ISOLDE: Karl Johnston and ISOLDE operation team

ISOLDE technicians: Julien Thiboud, Bernard Crepieux, Ermanno Barbero, Andres Vietez Suarez

Lasers (MELISSA): Valentine Fedosseev, Vadim Gadelshin, Bruce Marsh, Thomas Cocolios, Kristof Dockx, Klaus Wendt

and Julien Para-Lopez, Simon Stegemann, Marco Buzio, Roberto Formento Cavaier, Simone Gilardoni, Jose Somoza,

MEDICIS Promed team, the MEDICIS Collaboration and many others!

All the external partners that have been actively discussing with us!

João Pedro Ramos

<http://www.joaopedroramos.com>

[@kuleuven.be](mailto:joao.pedro.ramos@cern.ch)

Final Conference

The Final Conference on **MEDICIS-Promed and related science topics** will be held at

"The Ettore Majorana Foundation and Centre for Scientific Culture"

Erice (Italy) 30th April - 4th May 2019

Scientific Topics

- Accelerator techniques for medical isotope production
- Devices and engineering for isotopes handling
- Methods for production of novel radioisotope in theranostics
- Radioisotope beams in hadron therapy
- Pre-clinical research and development of new radiopharmaceuticals

J.P. Ramos | 29th of January 2019

Inter. aspects and app. related to the SPES project

Abstract submission
deadline: 28th February 2019
