

# SiPM workshop: from fundamental research to industrial applications

**Wednesday, 2 October 2019 - Friday, 4 October 2019**

**Università di Bari**

## Scientific Programme

The main goal of the workshop is to review the fields in which Silicon Photomultipliers are being employed. The workshop will focus also on the most recent and future developments in SiPM design and production, front-end electronics solutions and new characterization methods for SiPMs in extreme operating conditions.

The workshop will cover the following topics:

- New development and characterization methods
- High-energy and nuclear experiments
- Astroparticle and space applications
- Medical applications
- Industrial development
