

# + Obiettivi kickoff

- Presentazione del progetto e di alcune possibile tecnologie da utilizzare
- Capire i reciproci (inf-n-garr) requirement
- Organizzare gruppi di lavoro
- Definizione canali di comunicazione
- Definizione next step

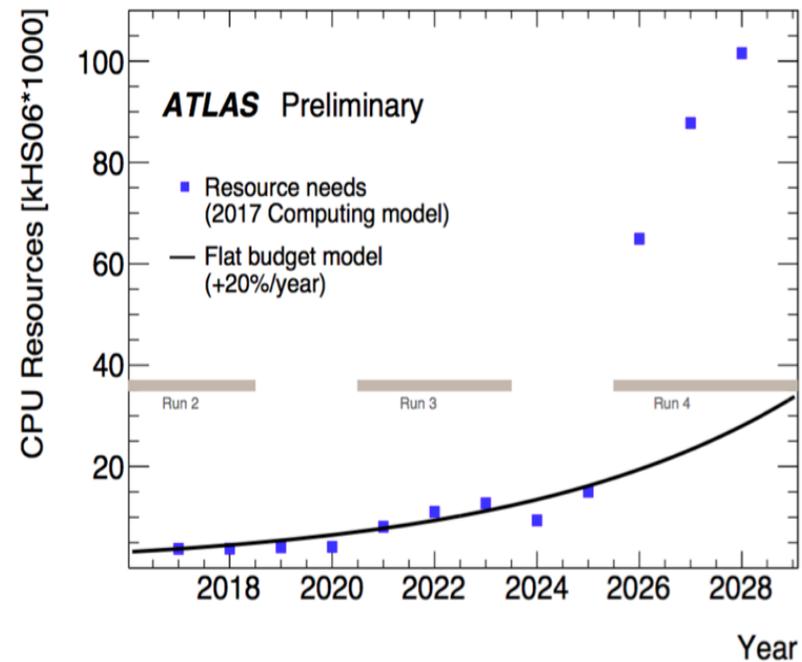

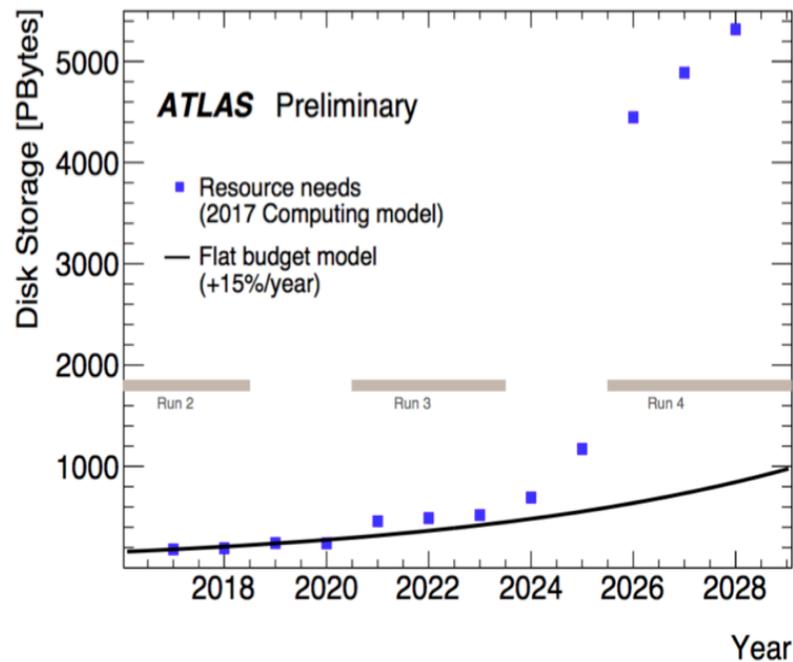

IDDLS: Italian Distributed  
Data Lake for Science

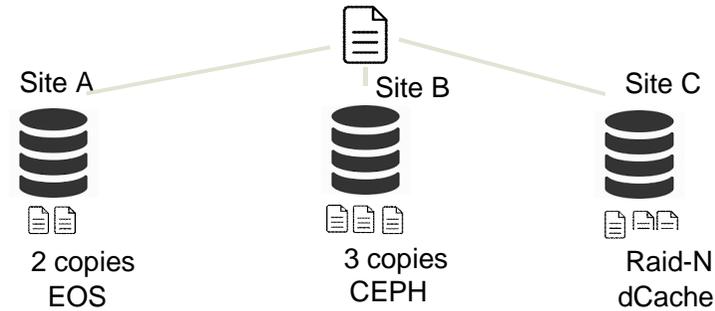

# + Motivation

- HL-LHC computing needs are above the expected technology evolution (15%/yr) and funding (flat)
- We need to optimize hardware usage and operational costs
- High fraction of the infrastructure and operation costs is due to Storage

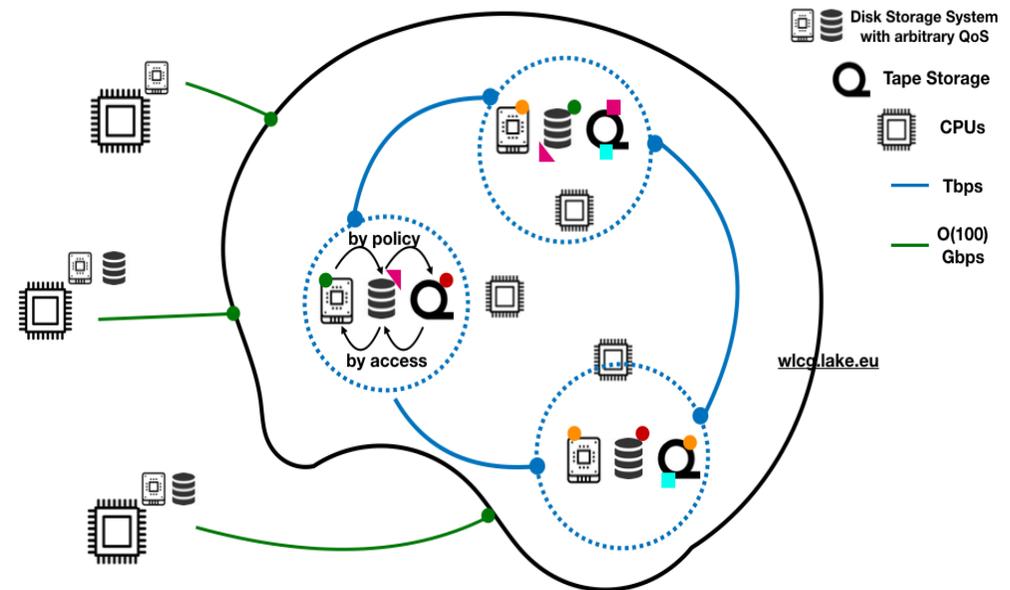

# + Some ideas on reducing Storage costs

- Reduce hardware cost: better exploiting the concept of QoS(Quality of Service)
  - Probably today we replicate more than we need
    - Reducing the number of copies

A stronger integration of sites could lead to a reduction of the number of copies

- Reduce Operational Cost: deploy fewer (larger) storage services maintaining high standards in availability and reliability
  - Create large storage repositories that “look like one, but it is composed of many” → **the DataLake**
- Co-location of Storage and CPU will not be guaranteed anymore
  - Need technologies for quasi-transparent data access from remote locations
    - Smart Caching

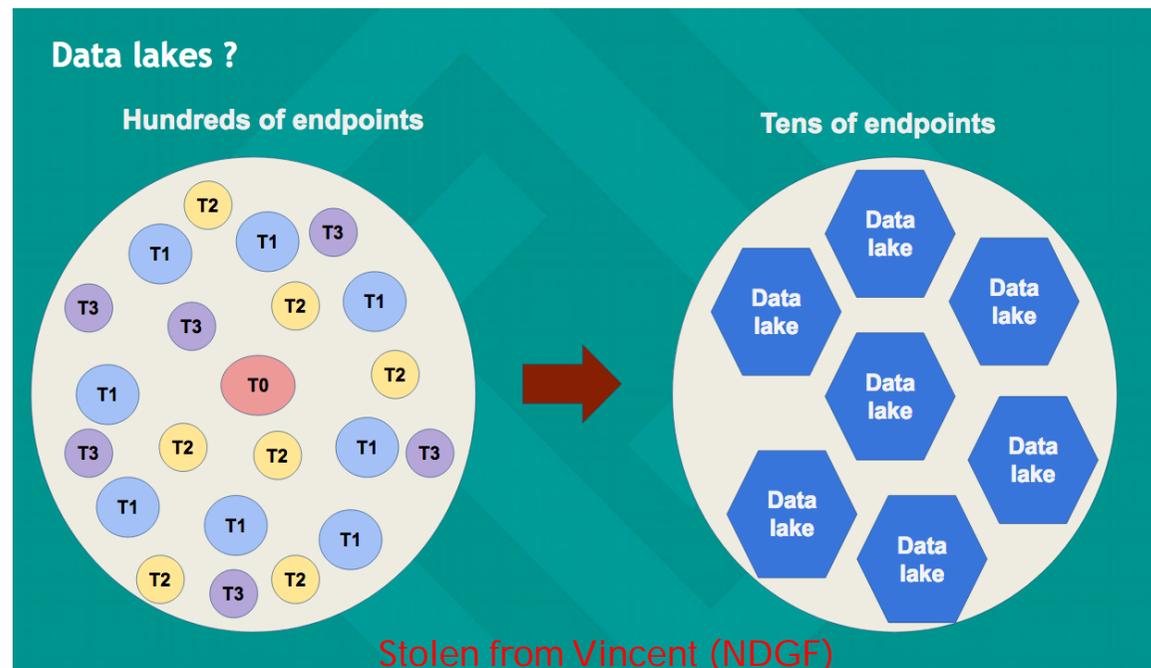

# + On the definition of the *Data Lake*

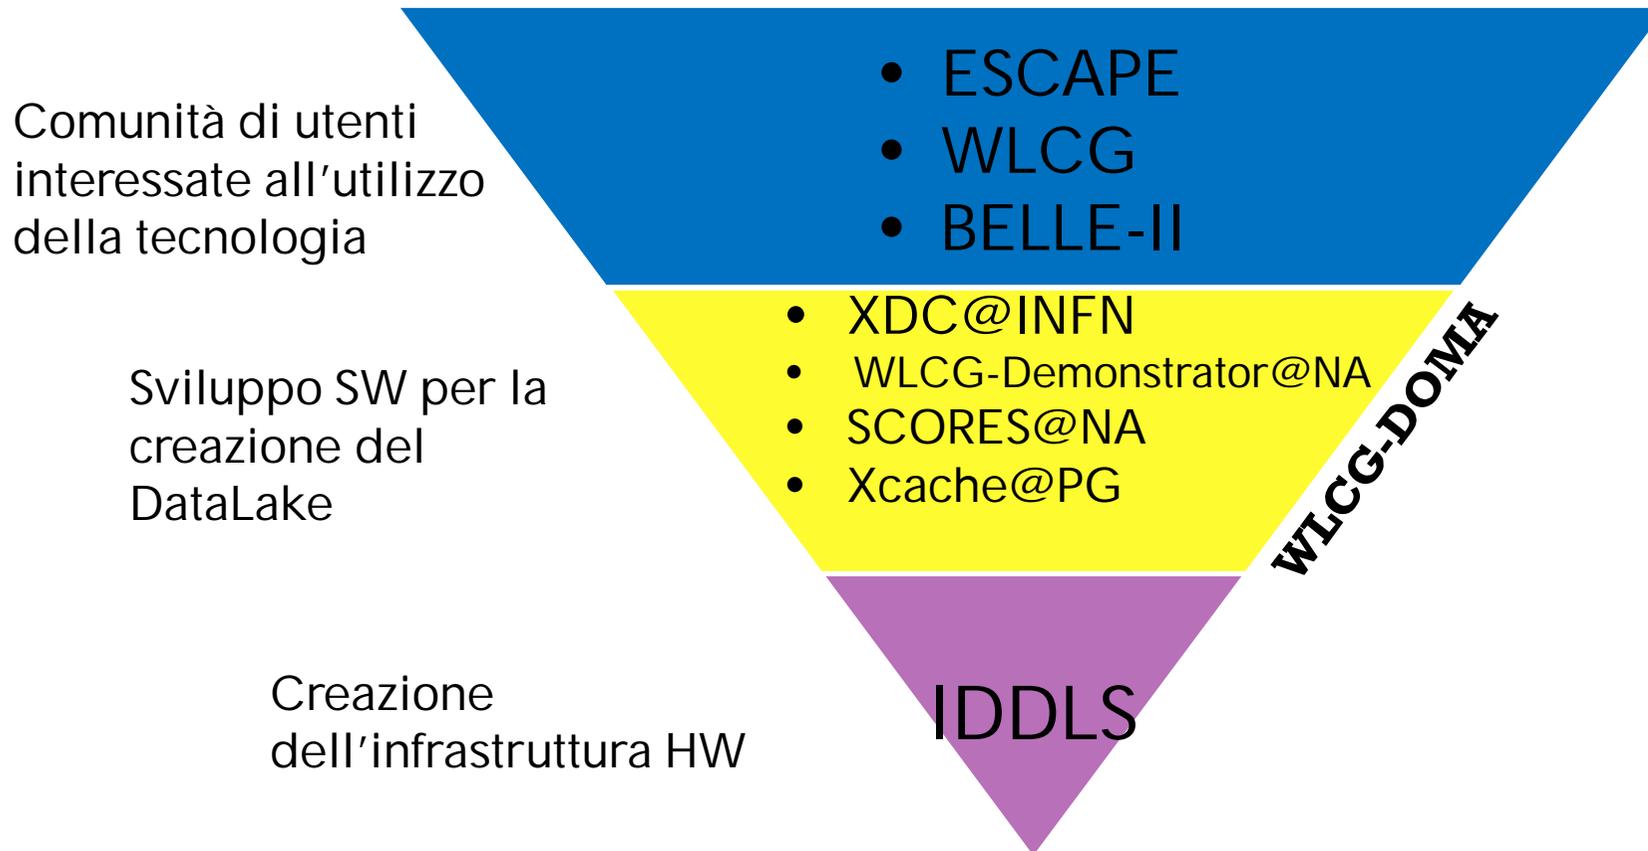

5

- Very diverse understanding of the expression *data lake*.
  - Attempts to define it by 'name space' or 'region' or 'country' all failed.

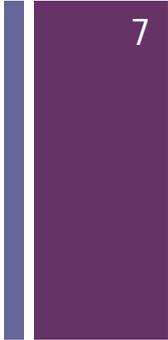

✗ **Looks like one thing, but is composed of many**

Creazione dell'infrastruttura HW

IDDLS

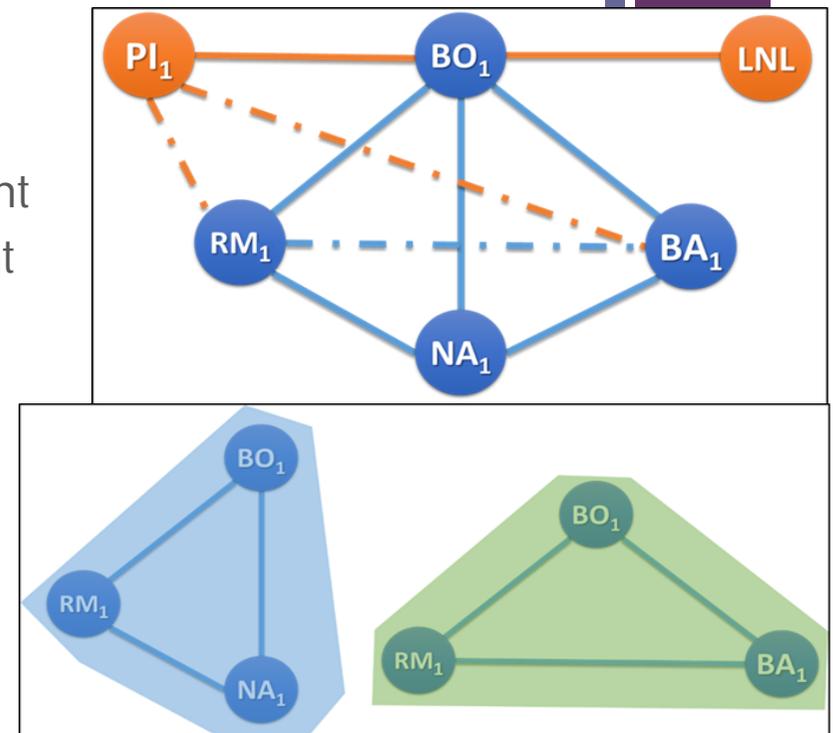

- ESCAPE: Astro-particle cluster (including SKA)
- 32 partner (CNRS lead)
  - 16Meuro
  - 800keuro INFN

The scientific drive towards combining and aligning data from different facilities online and offline will open-up the way **towards the implementation of a *data-lake* infrastructure for astronomy and physics** and it will be offered as a pillar infrastructure to be connected to EOSC for the next decades' data challenges.

# + The project

- INFN-GARR collaboration to realize a prototype of an Italian DataLake exploiting:
  - Last generation networking technologies provided by GARR
    - DCI (Data Center Interconnection) equipment
    - SDN (Software Defined Network) deployment
  - Software for creating **scalable storage federations** provided by INFN
    - eXtreme-DataCloud project (H2020 - INFN lead)
    - SCoRES project (INFN-NA)
  - Real life use cases for testing
    - CMS
    - ATLAS
    - BELLE-II
    - Possibly involving LNGS experiments (XENON) and VIRGO

8

Possible topologies of the GARR Network with DCI and SDN for the DataLake

# + Timeline

## ■ 3 years project

### ■ First year

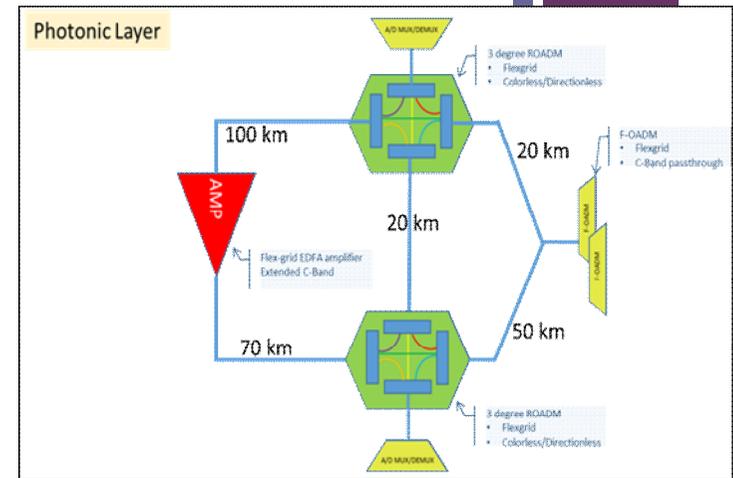

- Technology scouting for DCI equipment to be deployed by GARR
- Application (INFN) requirements analysis
- Network equipment acquisition (INFN and GARR) and Lab testing
- Deployment on mixed Lab+WAN environment of the networking equipment
- Creation of the DataLake on sites connected with standard networking and first prototype using DCI

### ■ Second year

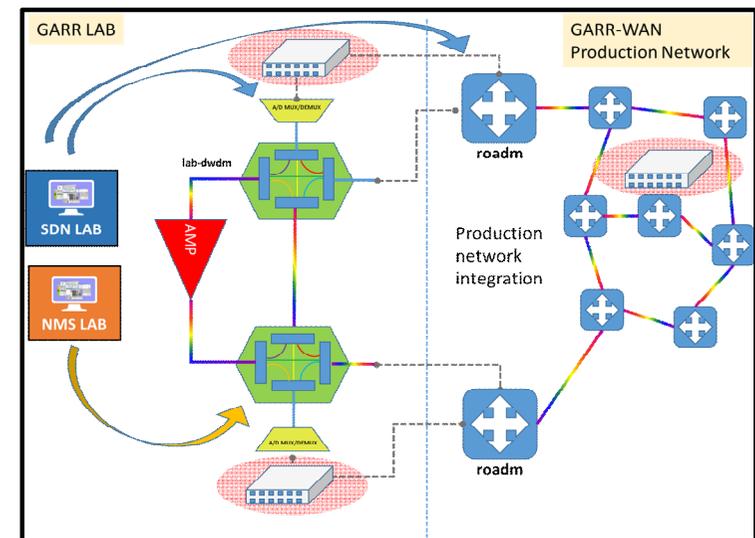

- Testing of the mixed (Lab+WAN) configuration
- Final creation of the DataLake on the 3 INFN sites with DCI systems
- Performance evaluation and comparison
- Possible acquisition of new equipment with increased performance

### ■ Third year

- Deployment only on WAN of the networking equipment
- Optimization of the DataLake
- Performance evaluation
- Final consideration

Lab deployment at GARR for testing

Mixed Lab+WAN deployment

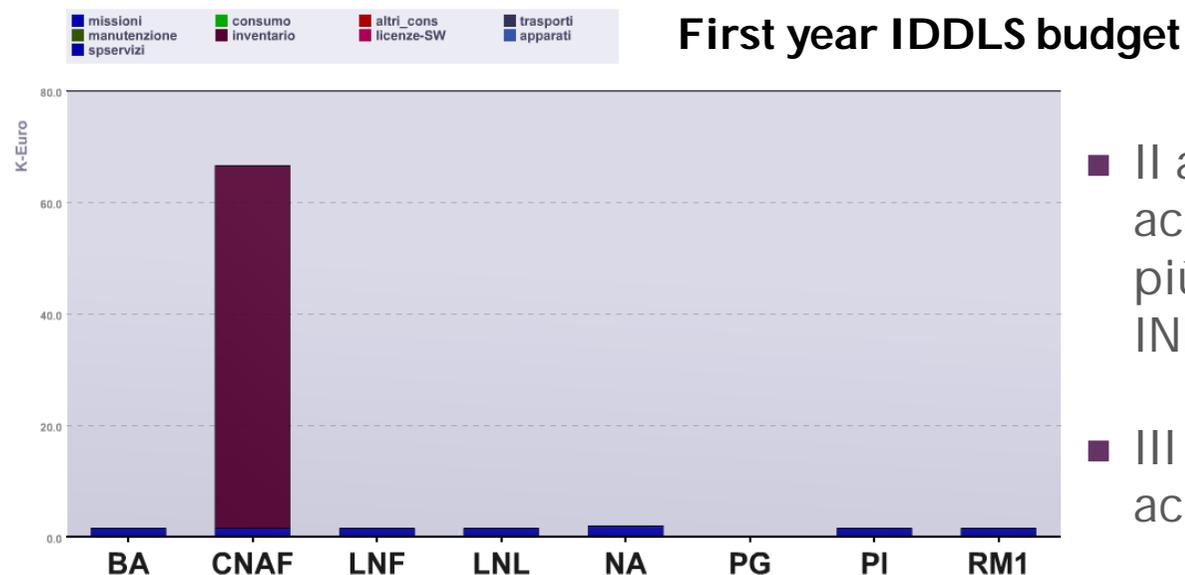

# + 2019 Milestone (simplified)

- 30/06/2019: Scelta degli apparati di networking per la creazione del Datalake
- 31/12/2019: Deployment degli apparati di rete in una configurazione Lab+WAN – primi prototipi DataLake su apparati DCI e standard
- 31/12/2019: Primi run per la valutazione delle performance sui prototipi

## + Budget richiesto

- 200k - contributo in kind del GARR con sistemi DCI per tre sedi INFN
- I anno richiesta tasca di 65k al CNAF per 3 apparati di rete per connettività verso sistemi GARR a 100gbs
  - 3 switch con uplink a 100gbs + 3 NIC + ottiche per 3 sedi
  - gli apparati saranno distribuiti alle sede opportune quando decise
    - studio in fase di progetto per decidere quale sia la migliore topologia
- Missioni: 1.5 per ciascuna sede che ne ha fatto richiesta

11

- Il anno: possibili nuove acquisizione di apparati di rete più performanti da parte di INFN, budget similare
- III anno non sono previsti acquisti

**GARR: 3x15%**

# + Afferenze

- Vedi excel

# + Gruppi di lavoro

15

- WP1 – Management
  - Coordinamento, rapporti CSN5 e referee, organizzazione meeting
  - Progress report periodici
  - Procedure acquisti
  
- WP2 - Studio, definizione e implementazione dei link ad alta velocità
  - Scouting tecnologico delle soluzioni Data Centre Interconnect (DCI)
  - Identificazione dei requisiti degli esperimenti INFN
  - Integrazioni delle componenti HW e SW delle tecnologie DCI
  - Sperimentazione mista laboratorio e infrastruttura di rete geografica
  - Condivisione dello spettro in ambiente protetto;
  - Modelli di provisioning
  - Modelli di gestione e controllo
  - Sperimentazione su infrastruttura geografica su 3 siti

# + Gruppi di lavoro

16

- WP3 – Creazione del DataLake
  - Definizione dello stato dell'arte delle tecnologie esistenti
  - Implementazione del DataLake con tecnologie basate su protocollo HTTD/XROOTD con e senza sistemi di caching
  - Implementazione del DataLake con tecnologie differenti (eventuali)
- WP4 – Testing del DataLake
  - Definizione della testsuite del progetto basata sul software degli esperimenti rappresentati, almeno CMS, ATLAS e BELLEII
  - Esecuzione della testsuite sul DataLake sfruttando sia i siti interconnessi con tecnologie di tipo DCI che di tipo legacy
  - Interazione con sedi INFN o legate all'ente produttrici di dati (i.e. LNGS, CASCINA) che possano essere interessate a testare le soluzioni del progetto
  - Valutazione delle performance ottenute
