

Phenomenology of scale-invariant gravity

Thursday, 13 June 2019 12:05 (25 minutes)

In this talk we discuss the possibility that tensor-scalar gravity is naturally scale-invariant, at least at the classical level. This assumption has a number of phenomenological consequences on the physics of the Universe at large scale and of black holes. We consider some of these to assess whether scale-invariance is a viable and fundamental symmetry.

Presenter: RINALDI, Massimiliano (TIFP)
