EUregio Meuse-Rhin site update

Thursday, 11 April 2019 15:30 (10 minutes)

The 2011 ET Conceptual Design Report identified the EUregion Meuse-Rhin –the Belgium-Dutch-German border region–as a potential site for Einstein Telescope. This presentation will give an update of the drilling activity to assess the seismic noise and the plans towards a broader geological study. Other issues like a recently published socio-economic impact study, new gravitational-waves research groups, a general laser-interferometry R&D laboratory and the public/political climate will be addressed as well.
