

WIN2019test The 27th International Workshop on Weak Interactions and Neutrinos.

Monday, 3 June 2019 - Saturday, 8 June 2019

Bari

Scientific Programme

Neutrino Physics

Theories of neutrino masses and mixing; long-baseline oscillation experiments; short-baseline oscillation experiments; atmospheric neutrinos; reactor neutrinos; solar neutrinos; searches for sterile neutrinos; neutrino-nucleus cross sections; direct neutrino mass measurements; neutrino-less double beta decay.

Electroweak interactions and Higgs physics

Experimental results, searches, and bounds; precision electroweak studies; Higgs physics; supersymmetry and alternative theories studies and experimental signatures; analyses of future collider prospects.

Flavor and Precision Physics

Theories of flavor and CP violation; theoretical tools for precision physics; lepton flavor violation; B-factories; electric dipole moments; $(g-2)$; other precision experiments at low energies; rare decays; low-energy CP violation; proton decay; neutron-antineutron oscillation.

Astro-particle Physics and Cosmology

Supernova neutrinos; neutrinos in cosmology; ultra-high energy cosmic neutrinos; direct and indirect searches for dark matter; new dark matter candidates; baryogenesis and leptogenesis; the cosmic microwave background; cosmological observations; dark energy; inflation.
