

The CYGNO/INITIUM TDR Status Report.

G. Mazzitelli on behalf of CYGNO/INITIUM collaboration

The design of the CYGNO/INITIUM project, aimed to prove the capability of a high resolution gaseous TPC with sCMOS (scientific CMOS) optical readout for near future directional Dark Matter searches, is under development and a Technical Design Report is foreseen by the end of the year. The status of the design, progress and open issues are presented and discussed.
