

Ana SOUSA

Hello! My name is Ana, and I'm a Science Communicator working in Coimbra, Portugal. I work in an engineering association, within the CentroAdapt project. This project is about transferring knowledge to the business sector in the central region of the country, on how to adapt to climate change. We organise events in different cities and take scientists to talk about this subject.

My background is in Applied Biology and I have a MSc in Science Communication by the New University of Lisbon.

I'm recently converted to the Graphic Design world: I like my coffee #000000. As this work gave me enough free time I could learn some of the Adobe Software and Photography, things that have become new passions.

I'm also a former "associationholic": participation in at least 4 associations during my graduation years (former President of the Applied Biology Student's Council of University of Minho). I was very active in the volunteer work, and I'm still the type of person that enjoys taking responsibilities.

Story time: I was always organising something. Once during a Conference, we had a speed-meeting with scientists. However, two of the speakers were missing. In an act of luck, I remembered to ask two master students who happen to be there to replace those speakers. "Would you like to talk about your research to these undergraduates?" They said yes, and one of them was studying penguins, so everything went very well with this unforeseen.
