

Agnese ABRUSCI

Hi! My name is Agnese and I am a science media producer layered on top of a physicist. I hold a PhD in Physics from the University of Cambridge (UK) and I have a three-year postdoctoral research experience in the Photovoltaic and Optoelectronic Device Group at the University of Oxford (UK).

Increasingly interested in public awareness of science and its implications on modern society, after my postdoc in Oxford, I took a leap toward Science Communication and I spent two years at the Italian Institute of Technology (IIT) where I produced lots of multimedia material to promote the Institute's research. To fully dive in "*the thick of it*", last year I moved to London and I completed a MSc program in Science Media Production at Imperial College where I learnt the ropes of science documentary and radio production.

I currently work as Communications and Business Development Manager at the Quantum Science and Technology Institute at University College London. In my role, I produce multimedia material for the Institute website and its social channels, I act as point of contact for media and press, and I organise outreach events for public and industry stakeholders.

I have interned as researcher for BBC Radio World Service and as director of photography's assistant for a science documentary: epic times!
