# To cut the story short

I worked almost seven years for CMS

- Two and a half in Padova
- Three at Cern
- The last one at Cnaf (Bologna)

My main duties were:

- The development of a Python tool to allow CMS physicists to submit analysis jobs to Grid environments (*LCG/gLite* and *OSG*)
- Test of tools on Grid middleware
- CMS software installation

## cont'd

...and of course to help people to cope with Grid related stuff  
(hard work sometimes)

# Now...

My main tasks here will be:

- Organize and possibly help making easier Subversion repo management

# Now...

My main tasks here will be:

- Organize and possibly help making easier Subversion repo management
  - with a set of Perl/Python scripts

# Now...

My main tasks here will be:

- Organize and possibly help making easier Subversion repo management
  - with a set of Perl/Python scripts
- Study a new build system for SuperB software

# Now...

My main tasks here will be:

- Organize and possibly help making easier Subversion repo management
  - with a set of Perl/Python scripts
- Study a new build system for SuperB software
  - with *Scons* (a Python building environment) and *Buildbot*

# Now...

My main tasks here will be:

- Organize and possibly help making easier Subversion repo management
  - with a set of Perl/Python scripts
- Study a new build system for SuperB software
  - with *Scons* (a Python building environment) and *Buildbot*
- AOB

## Up to now. . .

- I started with a very simple Perl script to create *Subversion* repositories

## Up to now. . .

- I started with a very simple Perl script to create *Subversion* repositories
- another small Perl script based on yum to allow installation of relocatable RPMs in different directories

## Up to now. . .

- I started with a very simple Perl script to create *Subversion* repositories
- another small Perl script based on yum to allow installation of relocatable RPMs in different directories
- I also started a light clean up of SRT shell scripts which, IMHO, need a deep restyling in view of the new building system
