

# 1 slide on submitted proposal

Daniele Mengoni

University of Padova, INFN Padova

UNIVERSITÀ  
DEGLI STUDI  
DI PADOVA

Friday, October 18<sup>h</sup>

Time	Expt.	Spokespersons	Title
8:30-9:00		CLOSED SESSION	
9:00		OPEN SESSION	
9:00		GANIL directorate	Welcome
9:05	E790_19	Piantelli	Isospin dynamics from QuasiProjectile fission fragments
9:20	E791_19	Giovinazzo	Study of proton-proton correlations in the two-proton radioactivity of ( <sup>54</sup> Zn or) <sup>48</sup> Ni with ACTAR TPC - re- submission of E742 proposal accepted in 2016
9:35	E792S_19	La Cognata	<sup>26</sup> Algs(n,p) <sup>26</sup> Mg and <sup>26</sup> Algs(n,a) <sup>23</sup> Na reactions studied via the THM.
9:50	E793S_19	Matta	Proton-neutron interactions across the N = 28 shell closure via <sup>47</sup> K(d,p) <sup>48</sup> K, and implications for the most neutron-rich phosphorus
10:05	E794_19	Camaiani	Cluster formation and decay in very excited light systems beyond Fermi energies
10:20-10:45		COFFEE BREAK	
10:45	E795S_19	Martel	Probing transfer of neutron clusters with Coulomb barrier reactions induced by <sup>8</sup> He
11:00	E796_19	Fernandez Dominguez	PROBING THE Z=6 SHELL GAP IN <sup>18</sup> C
11:15	E797S_19	Assié	Probing alpha clusters in the ground state of <sup>20,24</sup> Ne via alpha transfer reactions with MUGAST-AGATA- VAMOS set-up
11:30	E798_19	Lica	Study of deformed and spherical 2+ states via Coulomb excitation and first time measurement of PDR in <sup>34</sup> Si
11:45	Lol1_19	de Angelis	The <sup>79</sup> Se(n,γ) capture cross section via the surrogate d( <sup>79</sup> Se, <sup>80</sup> Se,γ)p reaction
12:00	Lol2_19	Clement	Safe Coulomb excitation of <sup>48</sup> Cr
12:15	Lol3_19	Recchia	Neutron capture at the <sup>85</sup> Kr s-process branching
12:30	Lol4_19	Assié	Study of np pairing in fp-shell through two-nucleon transfer reactions with MUGAST-AGATA-VAMOS : <sup>56</sup> Ni( <sup>3</sup> He,p) <sup>58</sup> Cu or <sup>48</sup> Cr( <sup>3</sup> He,p) <sup>50</sup> Mn

**PREMISE:** [..] During the 2019 run, new SPIRAL1 beams will be tested (<sup>48</sup>Cr, <sup>49,50</sup>Sc, <sup>55</sup>Co, <sup>56,57</sup>Ni) and the production yields of Al, P and Cl will be also be checked. [..]
