On the Nature of the Future

Thursday, 11 July 2019 14:30 (45 minutes)

The aim of this talk is to offer a critical overview of the current philosophical debate in the philosophy of the future, stressing the close connections between physics and metaphysics. I will discuss linear and branching-time models, underlining their relations with the debate on tense realism, that is, the debate about whether the flow of time is a genuine feature of reality.

Presenter: IAQUINTO, Samuele (Milano Univ.)
