## Recent CP Violation and CKM Results from BABAR

We report on a variety of recent studies of CP violation using data collected with the Babar detector at the SLAC  $e^+e^-$  asymmetric collider B-factory operating on the Upsilon(4S). These include measurements associated with the angles of the unitarity triangle of the Cabibbo-Kobayashi-Maskawa quark mixing matrix as well as searches for CP violation in charm decays. Babar measurements of the CKM elements will also be presented with a focus on recent measurements of  $|V_{ub}|$ .
