

BEACH 2010 - IX International Conference on Hyperons, Charm and Beauty Hadrons

Contribution ID: 92

Type: **not specified**

Unitarity Triangle and New Physics

The origin of flavour and the understanding of the hierarchies in quark and lepton masses and mixings are among the most important open issues in particle physics. In this talk, we discuss a range of topics: from theories that can (partially) explain the origin of flavor to more specific issues related to the precise determination of elements of the CKM matrix including the interpretation of interesting recent experimental results. The global status of the field, as well as its future prospects, are also discussed.
