

## On complexity in holography

*martedì 22 ottobre 2019 10:10 (35 minuti)*

Computational complexity is a quantum information concept that recently captured increasing attention in gravitational holography. In particular, the complexity=volume (CV) and complexity=action (CA) conjectures have been proposed as gravitational duals of quantum computational complexity. In this talk I will discuss these holographic conjectures and their subregion generalizations in a few specific situations in asymptotically AdS<sub>3</sub> spacetimes and in its Warped generalization.
