RAL Tier 1 and 2 status

- RAL Tier 2 is ready to accept Grid jobs
  - Heavily used at the moment.
  - Data transfers have been tested.
  - SE Storage limited to 200 Gbytes at the moment.
  - Not sure where superb-env.{csh,sh} should be placed. At the moment put in $SW_ROOT/scripts/superb-env.{csh,sh}
- RAL Tier 1
  - Requested VO to be setup. May be ready by end of week.
  - If no problems can probably install software by Christmas.
  - Hopefully can use resources allocated to BaBar.
- Setup Problems
  - Avoided most problems by installing locally first on a scratch area before using Grid installation.
  - Rewrote install.sh script to print out environment, test each and every step.
  - Some system libraries were missing when ran PacMCApp on Grid. Ran "ldd PacMCApp" first to identify them and then contact administrator.
