

Longitudinal Bunch Position Update

Super-B Workshop
Annecy, France
March 17, 2010

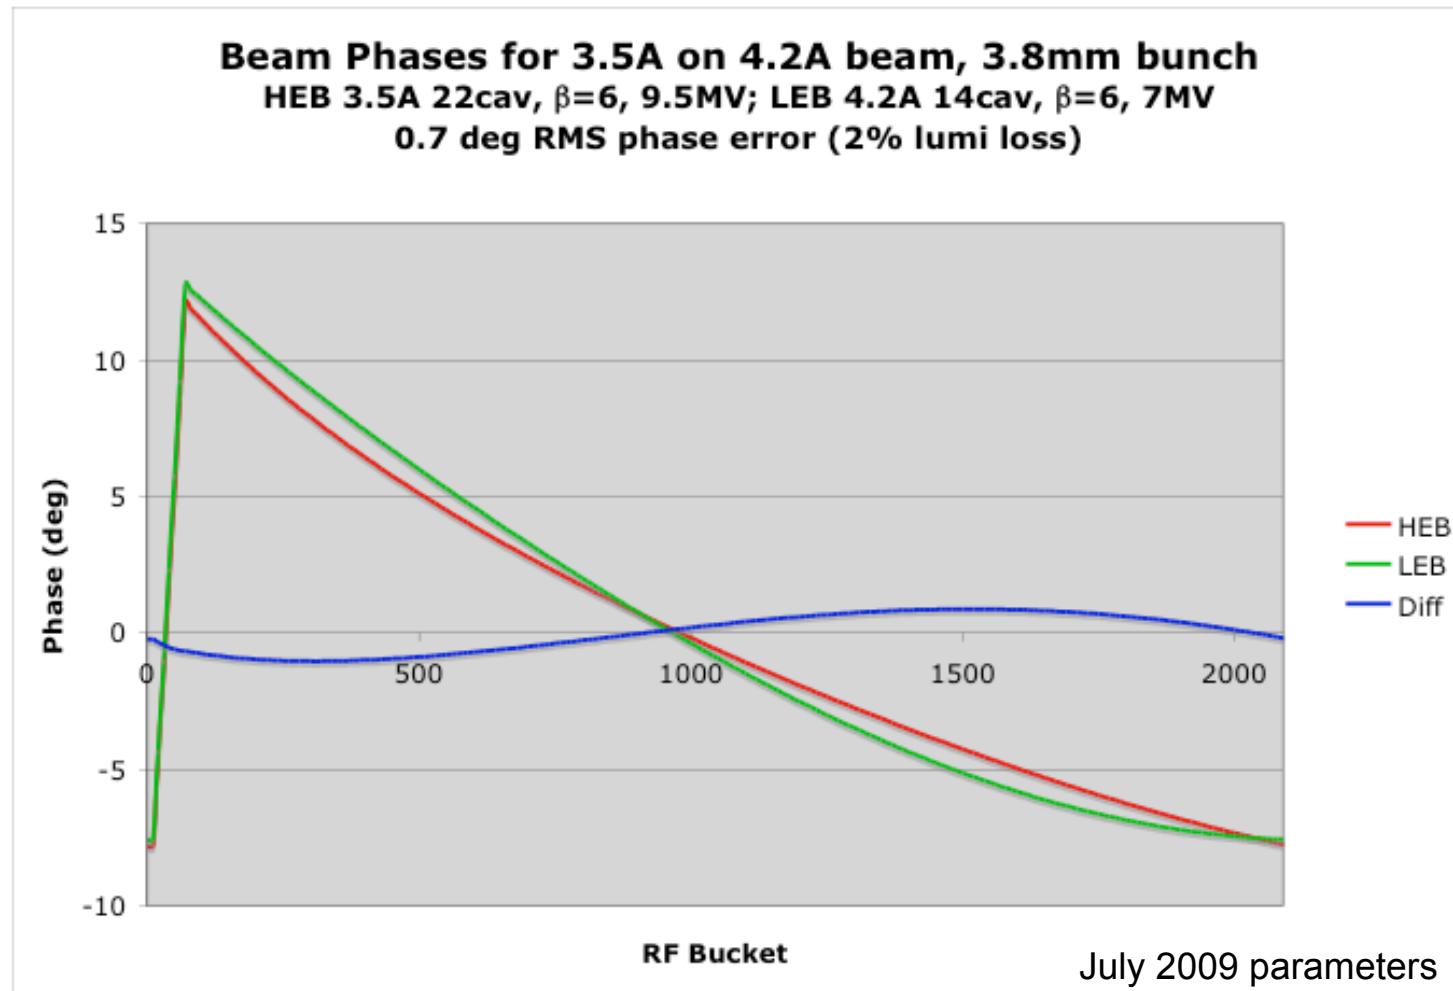

Kirk Bertsche

Problem

- e+ and e- bunches must overlap at crab waist
 - For 5 mm (1σ) bunch, 0.5 degrees RF phase difference (1.0 mm) between HER and LER decreases luminosity by 1%
 - Want RMS error < 0.5 deg
- Phase transient
 - Due to ion-clearing gap and heavy beam loading of cavities
 - About 10x the 0.5 degree requirement
 - Generally different for HER and LER

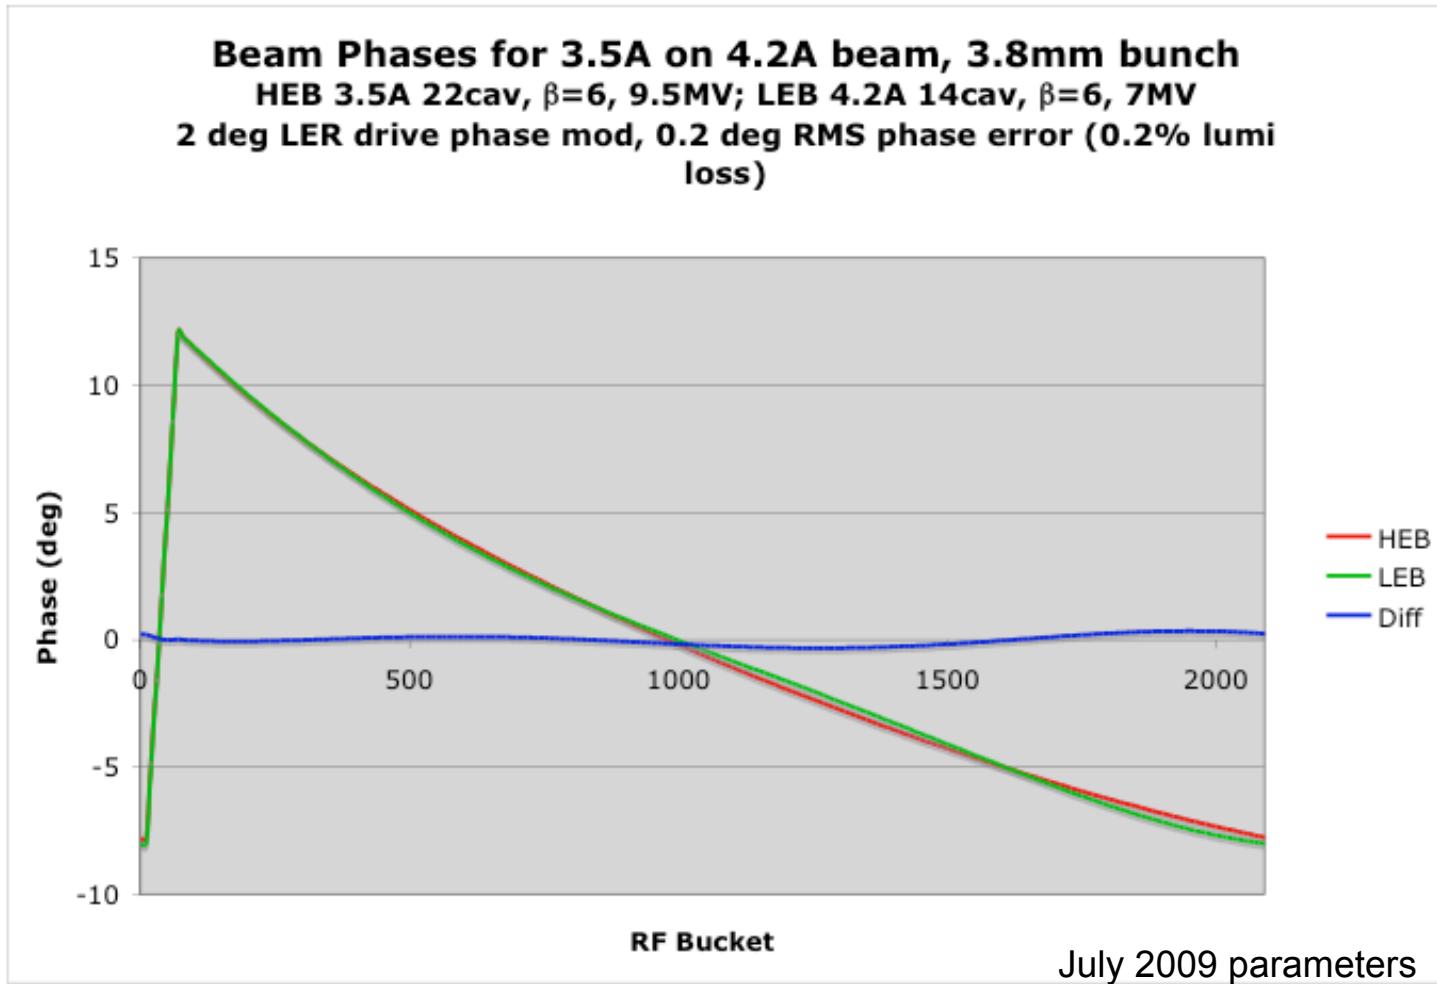

- Perfect matching
 - Requires identical beam currents in HER and LER
 - Requires identical ratio of beam/cavity power
 - May require more RF stations than otherwise needed
-> installed RF power not well-utilized
- Imperfect matching
 - With unequal beam currents, other parameters can be adjusted to approximately match overall phase transient
 - If necessary, the residual quasi-sinusoidal error can be fixed by modulating RF drive phase

Example: Imperfect matching

- Overall phase change is well-matched
- Quasi-sinusoidal difference: 2% lumi loss if uncorrected

Correction of Phase Error

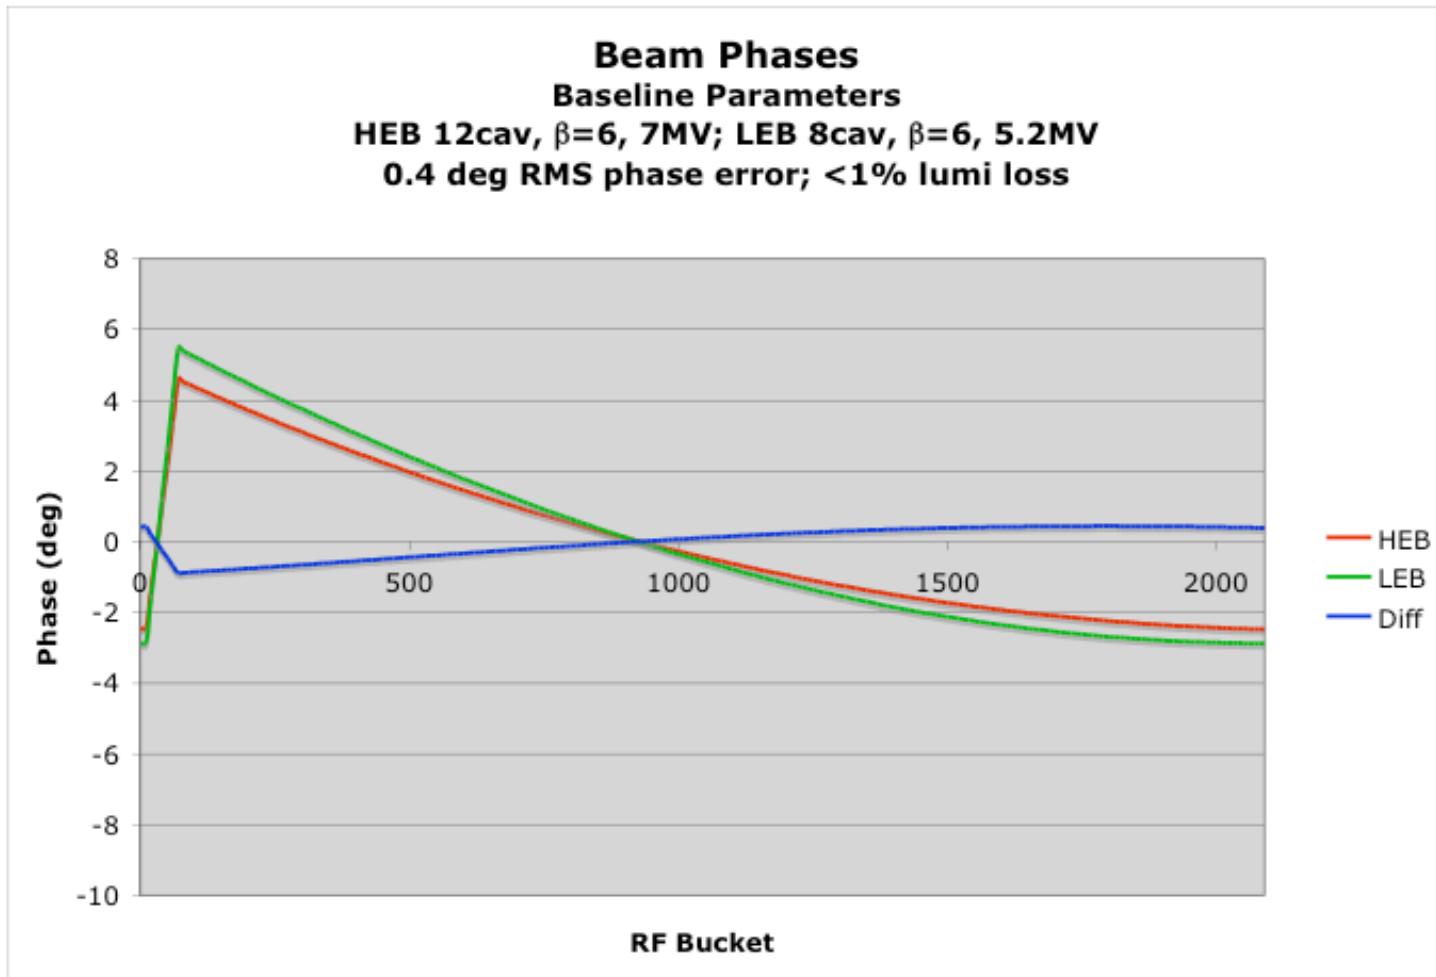

- ± 2 deg sinusoidal phase mod of LER klystron drive at revolution frequency corrects phase error
- System bandwidth (5 MHz) should allow $\sim \pm 90$ deg modulation

Feb 23, 2010 Parameters (v.12?)

Baseline Parameters

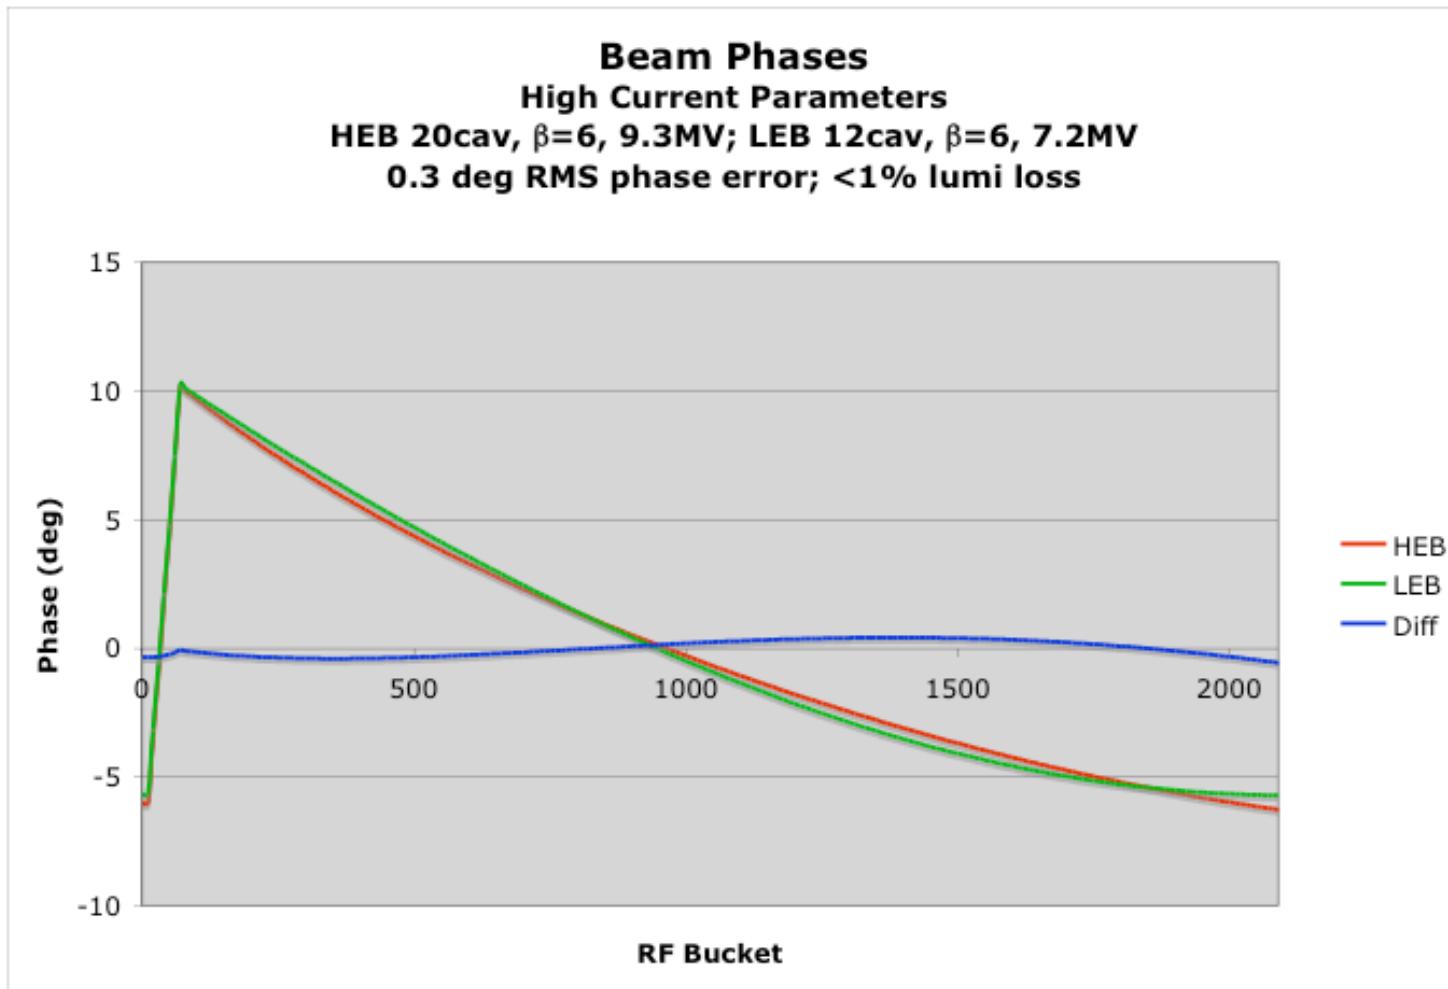

- HER 12 cav 7MV $\beta=6$, LER 8 cav 5.2MV $\beta=6$
- Lose <1% of lumi due to gap transient mismatch

Low Emittance Parameters

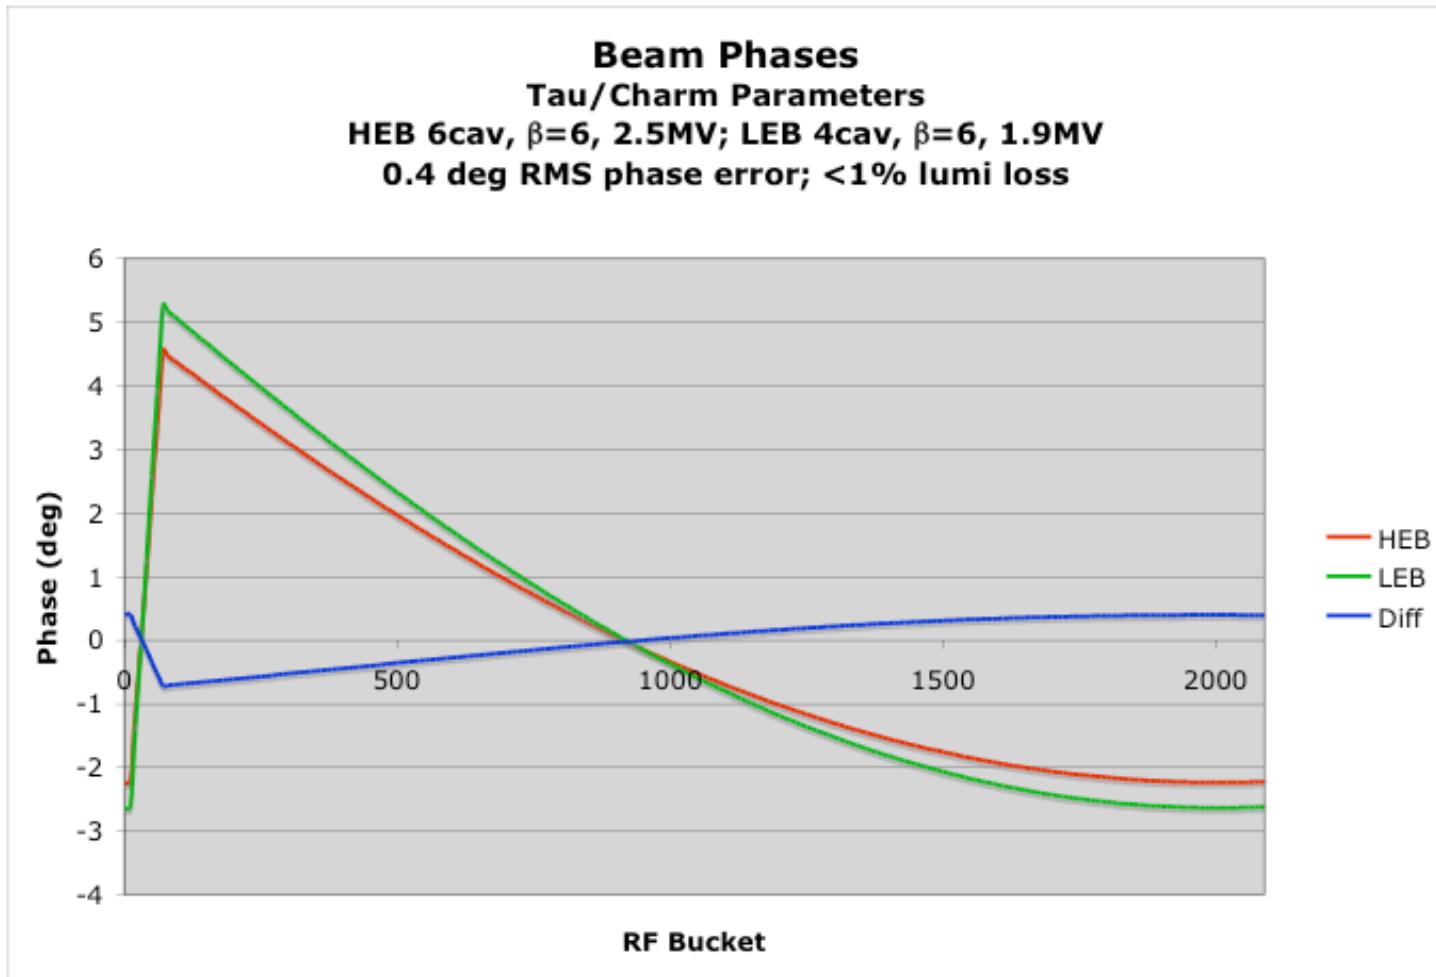

- HER 12 cav 6.9MV $\beta=6$, LER 8 cav 5.1MV $\beta=6$
- Lose <1% of lumi due to gap transient mismatch

High Current Parameters

- HER 20 cav 9.3MV $\beta=6$, LER 12 cav 7.2MV $\beta=6$
- Lose <1% of lumi due to gap transient mismatch

Tau/Charm Parameters

- HER 6 cavs 2.5MV $\beta=6$, LER 4 cavs 1.9MV $\beta=6$
- Lose <1% of lumi due to gap transient mismatch

Conclusions

- RF system likes new parameters
 - LER current 20-30% higher than HER
 - Gap transients can be fairly well matched without adding extra RF cavities
 - Sinusoidal phase errors can be corrected if necessary (not necessary at present)
- Cavities
 - Must increase coupling constant to ~6 to get power into cavities
 - Minimum: 12 HER and 8 LER cavities
 - High Current operation: 20 HER and 12 LER cavities
 - Recommend 1 additional RF station (2 cavities) in each ring for reliability
