## SU(3) thermodynamics at high temperatures

*Thursday, 17 June 2010 17:00 (20 minutes)*

We determine the SU(3) equation of state and the Polyakov loop up to perturbative temperatures on lattices with  $nt=5,6$  and  $8$ . The continuum results are contrasted to various resummations and orders of perturbation theory. At very low temperatures we explain our data in terms of a glueball gas.
