The $B^* B\pi$ coupling

Tuesday, 15 June 2010 10:30 (20 minutes)

We study an efficient method for the lattice calculation of the $B^* B\pi$ -coupling in the static limit, a parameter of the heavy meson chiral Lagrangian, paying particular attention to excited state contamination. Precise studies of the continuum limit in the quenched approximation and of the chiral behaviour with 2 flavours of improved Wilson quarks (using CLS lattices) for pion masses down to around 250 MeV are presented.
