Nucleon form factors and structure functions from $N_f=2$ clover fermions

Monday, 14 June 2010 14:30 (20 minutes)

We present an update on the ongoing efforts of the QCDSF collaboration to compute the nucleon's generalized) form factors and moments of structure functions. The focus will be on our most recent results obtained on gauge configurations where the pseudo-scalar meson mass is in the range of 170-270 MeV. We will compare our results with calculations carried out in chiral effective theories.
